"Well, he doesn't deny it, does he?" Dwight asked, his eyes flashing.

"I don't know whether he does or not," said Garner. "But I know he's the most dangerous man in the county, and when he is here he will back up anything. I thought I'd tell you that if I were you I'd avoid him."

"Avoid him? You mean to tell me," Dwight stood up in his anger, "that I, a free-born American citizen, must sneak around in my own home to avoid a man that puts on a white mask and short and with fifty others like himself struts into this town and thrashes the life out of a lot of weak-minded negroes? Most of them were good-for-nothing, lazy scamps, but there was one in the bunch that I know was harmless. Oh, I got mad about it and I talked plainly, I assure that, but I couldn't help it."

"You could have helped it," Garner said, testily, "and you ought to have protected your own interests better than to give Wiggin such a strong pull over you. If you are elected it will be by the votes of those men and their kin and friends. We may be able to muzzle it all over, but if you have a row with Dan Willis to-night, the cause of it will spread like wild-fire and turn votes in wads and bunches. Good God, man, the idea of giving Wiggin a torch like that to wave in their faces—you a town man standing up for the so-called black criminal brutes! I say that's the way Wiggin and Dan Willis would interpret your platform."

"I can't help it," Dwight said, more calmly, and his voice shook with suppressed feeling as he went on. "If I lose all I hope for politically, and this seems like the best chance I'll ever have to get in the Legislature, I'll stand by my convictions. We must have law and order among ourselves if we expect to knock it to the lowest among us. I was mad that night. You know that I love the South. Its blood is my blood. Three of my mother's brothers and two of my father's died fighting for the Lost Cause, and my father was under fire from the beginning of it to the end. In fact, it is my love for the South and all that is good and decent in it that made my blood boil the night that mob came to town. I saw a part of it you didn't see."

"It was a warm moonlight night, and I was sitting at the window of my room at home looking out over Major Warner's yard when the first screams and shouts came from the negro quarter. I suspected what it was, for I'd heard of the threats the mountaineers had made against the colored people, but I wasn't prepared for what I actually saw. The cottage of old Uncle Lewis and Aunt Linda is just behind the Major's house and in plain view of my window. I saw the old pair come to the door and run out into the yard, and then I heard Linda's voice. 'It's my child!' she screamed. 'They are killing him!' Uncle Lewis tried to quiet her, but she stood there wringing her hands and sobbing and praying. The Major raised the window of his room and looked out, and I heard him ask what was wrong. Uncle Lewis tried to explain, but his voice could not be heard above his wife's cries. A few minutes later Pete came running down the street. They had hit him too. His clothes were torn to strips and his back was livid with great welches. He had a narrow escape, but I perceive that he keeled over in a fit. The Major came down, and he and I bent over the boy and finally restored him to consciousness. Major

Warren was the maddest man I ever saw, and a mob as hundred strong couldn't have touched the negro and left him alive."

"I know that was all bad enough," Garner admitted, "but antagonizing those men now won't better the matter and may do you more political damage than you'll get over in a lifetime. You can't be a politician and a preacher both; they don't go together. You can't dispute that the negro quarter of this town was a disgrace to a civilized community before the whitecaps raided it. Look at it now. There never was such a change. It is as quiet as a Philadelphia graveyard."

"It's the way they went about it that made me mad," Carson Dwight retorted. "Besides, I know that boy. He is as harmless as a kitten, and he only hung around those dives because he loved to sing and dance with the rest. I do get mad; I'm mad yet. My people never hated their slaves when they were in bondage; why should I stand by and see them beaten now by people who never owned negroes and never cared for or understood them? Before the war a white man would stand up and protect his slaves; why shouldn't he take up for at least the best of the negroes now?"

"That's it," Blackburn spoke up, admiringly. "You are a chip off the old block Carson. Your daddy would have shot any man who tried to whip one of his negroes. You can't help the way you feel, but I agree with Bill here; you can't get the support of mountain people if you don't at least pretend to see things their way."

"Well, I can't see this thing their way," said Carson, "and I'm not going to try. When I saw that old black man and woman out in the moonlight with their very heart-strings torn and bleeding, and remembered that they had been kind to my mother when she was at the point of death—bitting by her bedside all night long as patiently as blocks of stone, and shedding tears of joy at the break of day when the doctor said the crisis had passed—when I think of that and admit that I stand by with folded hands and remember that I should have tried to be a human to blood-bots with utter shame. It has burnt a great lesson into my brain, and that is that we have got to have law and order among ourselves. That's one thing I want to go to the Legislature for."

"I understand Pete would have got off much easier if he hadn't fought them like a tiger," said Blackburn. "They say—"

"And why shouldn't he have fought?" Carson asked, quickly. "The rarer the brute creation a man is, the more he'll fight. A tame dog will fight if you drive him in a corner and strike him hard enough."

"Well, you hustled up our game," Keith Gordon said, leaving the table in the rear and coming forward, accompanied by another young man, Wade Tingle, the editor of the *Reddick*. "Wade and I think agree, Carson, that you've got to stay out of Dan Willis's way. We are backing you, tooth and tongue, in the campaign, but you'll tie our hands if you antagonize the mountain element. Wiggin knows that, and he is working it for all it's worth."

"That's right, old man," the editor joined in, earnestly. "I may as well be plain now. I'm making a big issue out of my support of you, but if you make the country people and they will stop taking the paper. I can't live without their patronage, and simply can't back you if you don't stick to me."

"I wasn't raising a row," the candidate said. "But Garner came to me just now advising me to avoid the dirty scoundrel. I won't dodge a man who is going about threatening what he will do when he meets me face to face. I want your support, but I can't buy it that way."

"Well," Garner said, grimly, more to the others than to his partner, "there will be a row right here inside of ten minutes. I see that now. Willis has heard certain things Carson has said about the part he took in that raid, and he is looking for trouble. Carson isn't in the mood to take back anything, and a fool can see how it will end."

CHAPTER II

Kerra Gordon and Tingle motioned to Garner, and the three stepped out on the sidewalk, leaving Blackburn and the candidate together. The street was quite deserted. Only a few of the ramshackle street-lights were burning. Though the night was cloudy, the location of the stores, the barber shop, and post-office being indicated by the oblong patches of light on the uneven brick pavement.

"You'll never be able to move him," Keith Gordon said, stroking his blood-mustache nervously. "The truth is he's terribly worked up over it. Between us three, Carson never loved but one woman in his life, and she's Helen Warner. Aunt Linda is her old mammy. If Carson knows what she does home as soon as Pete's trouble it is going to hurt her awfully. Helen has a good, kind heart, and she loves Linda as if they were of the same

feet and blood. If Carson meets Dan Willis to-night he'll kill her or get killed. Say, boys, he's too fine a fellow for that sort of thing right on the eve of his election. What the devil can we do?"

"Oh, there's a woman at the bottom of it," the lawyer said, cynically. "I'm not surprised at the way he's acting now, but I thought that case was over with. Why, I heard she was engaged to a man down where she's visiting."

"She probably is," Gordon admitted, "but Carson is ready to fight her battles. I honestly think she turned him down when he was ruling as high with her brother a year ago, but that didn't alter his feelings towards her."

Garnier sighed as he thrust his hand deep into his breast pocket for his plug of tobacco and began to twist off the corner of it. "The most maddening thing on earth," he said, "is to have a close friend who is a damned fool. I'm getting tired of this thing. Old Dwight is out of all patience with Carson for the reckless way he has been living, but the old man is really carried away with pride over his political chances. It was the old man's ambition in his early life, and he likes to see his son go in for it. He was powerfully tickled the other day when I told him Carson was going in on the biggest wave of popularity that ever bore a human chip to shore, but he will run a blue streak when the returns come in, for I tell you, boys, if Carson has a row with Dan Willis to-night, it will knock him higher than a kite."

"Do you know whether Carson has anything to shoot with?" Tingle asked, thoughtfully.

"Oh yes; I saw the bulge of it under his coat just now," Garnier answered, still angrily, "and if they come together it will be raising lead for a while."

"I was just thinking about his mother," Keith Gordon remarked. "My sister told me the other day that Mrs. Dwight was in such a low condition that any sudden shock would be apt to kill her. A thing like this would be a terrible thing—that is, if there is really any shooting. Don't you suppose if we were to shoot Carson that side of it he might agree to go home?"

"No; you don't know him like I do," Garnier said, firmly.

"It would only make him madder. The more reasons we give for him avoiding Willis, the more stubborn he is. I guess we'll have to let him sit there."

Just then a tall countryman, under a broad-brimmed saddle hat, wearing a cotton checked shirt and jean trousers, passed through the light of the entrance to the hotel near by, and slouched through the intervening darkness towards them.

"It's Pole Baker," said Keith. "He's a staunch supporter of Carson's. Say, hold on, Pole!"

"Hold on yourself. What's up?" the countryman asked, with a laugh. "Plottin' agin the whites?"

"We want to ask you if you've seen Dan Willis to-night," Garnier questioned.

"Have I?" Baker insisted. "That's exactly why I'm lookin' for you town boys, grand old 'goin' on out home where I belong. I'm as sober as an empty keg, but I got the credit of bein' in the calashose every time I don't answer the old lady's roll-call at bedtime. Yes, Willis is loaded for bear, and he's got some bad news with him down at the wagon-yard. Wiggin has filled 'em up with a lot of stuff about what Carson said about the white-cap raid 'tother night. I thought I'd sooner put you fellers on, so you could keep our men out of the way till their liquor wears off. Besides, I'm here to tell you, Pole Baker, that a steady crew Wiggin's set about in the mountains. He says a regular gang has been organized here in town to take up the coons agin the pore whites in the country. We might crush that out in time, you know, but we'd never kill it if that's a sight over to to-night."

"That's the trouble," the others said in a breath.

"Wait one minute—you stay right here," Baker said, and he

went and stood in front of the store door and looked in for a moment, then he came back. "I thought maybe he'd let us all talk sense to 'im, but you couldn't put reason into a man like that any easier than you could dip up melted butter with a hot awl. I can't see any chance unless you fellers will leave it to me."

"Leave it to you?" Garnier exclaimed. "What could you do?"

"I don't know whether I could do a blessed thing or not, boys, but the darn thing is so obnoxious that I'm willin' to try. You see, I never talk my politics—if I do, I talk it on 'tother side to see what I kin pick up to advantage. The truth is, I think them shakers consider me a Wiggin man, and I'd like to give a shake at 'em an' try to git 'em to leave town. Johnson is the leader of 'em, and he never gets too drunk to have some natural caution."

"It certainly couldn't do any harm for you to try, Pole," said Tingle.

"Well, I'll go down to the wagon-yard and see if they are still hanging about."

As he approached the open space in question, which was about one hundred yards square, surrounded by a high fence, at the lower end of the main street, Pole stood in the broad gateway and glanced at the numerous camp-fires which glowed out from the darkness. He finally descried a group of men around a fire near two white-headed wagons, the wheels of which were haltered two pairs of horses. As Pole advanced towards them, paying cheerful greetings to various men and women around the different fires, he recognized Dan Willis, Abe Johnson, and several others.

A quiet whiskey-drunk, nearly empty flask on the ground in the light of the fire round which the men were seated. As he approached they all looked up. It seemed to suggest a moment on the part of Dan Willis, a tall man of thirty-five or thirty-six years of age, who wore long matted hair and had bushy eyebrows and a crow's-foot under each eye, taking up the flask, he rose and dropped it into his coat pocket, and spoke to the two men, who sat on either side of Abe Johnson.

"Come on," he growled. "I want to talk to you. I don't care whether you come or not, Abe!"

"Well, I'm out of it," replied Abe Johnson. "I've talked to you till I'm sick. You are too darned fond to have any sense."

"Well, it's just this, Abe," Pole leaned back till his feet rose from the ground, and he twisted his neck as his eyes followed the three men who, with their heads close together, had moved a little farther away. "Maybe you don't know it, Abe, but I need to be in the government revenue service, and in any way and another, that's neither here nor there, I drop on to underground information, an' I want to give you a tip. I want to start you in business. You'd admit, I reckon, that if them two men meet that will be apt to be bloodshed."

Drawn by J. E. M.

"Why, it's this here devilment that's brewin' betwixt Dan and Carson Dwight!"

Willis and the two men walked off together and stood behind one of the wagons. Their voices, muffled by the effects of whiskey, came back to the ears of the remaining two.

"Goin' out home to-night, Abe?" Baker asked.

"I want to, but I don't want to leave that damned fool here in the condition he's in. He'll either commit murder or git his own head shot off."

"That's exactly what I was thinkin' about," said Pole, sitting down on the ground carelessly and dragging his knees up in the embrace of his strong arms. "Look here, Abe, I'm here to tell you I sooner hate to see an unsuspecting neighbor like you walk into serious trouble, great big trouble, Abe—trouble of the sort that would make a man's wife an' children lie awake many a night."

"What the hell you mean?" Johnson asked, twisting up his ears.

"Why, it's this here devilment that's brewin' betwixt Dan an' Carson Dwight."

"Well, what's that to me?" Johnson asked.

"Well, it's just this, Abe," Pole leaned back till his feet rose from the ground, and he twisted his neck as his eyes followed the three men who, with their heads close together, had moved a little farther away. "Maybe you don't know it, Abe, but I need to be in the government revenue service, and in any way and another, that's neither here nor there, I drop on to underground information, an' I want to give you a tip. I want to start you in business. You'd admit, I reckon, that if them two men meet that will be apt to be bloodshed."

Johanson stared over the camp-fire sullenly. "If the feller hain't had the sense to git out o' town thar will be, an' p'haps 't' it," he said, with a dry chuckle.

"Well, thar's the difficulty," said Pole. "He hain't left town—an' what's worse than that his friends hain't been able to budge 'im from his seat in Blackburn's store, whar Dan couldn't miss 'im if he was blindfolded." He's heard threats, and he's as mad as a man as ever pulled hair."

"Well, what the devil—"

"Hold on, Abe. Now, I'll tell you whar you come in. My underground information is that the Grand Jury is hard at work to git the facts about that whitecap raid. The whole thing and same of leader and members of the gang has been kept close so far, but—"

"Well!" the half-defiant look in the face of Johanson gave way to one of growing alarm. "Well!" he repeated, but went no further.

"It's this way, Abe—Abe! I'm here as a friend, I reckon. You know, as well as I do, that if thar is blood shed to-night it will git into court, and a lot about the whitecap raid and matters even further back will see the light."

Pole's words had made a marked impression on the man to whom they had been so addressly directed. He frained forward nervously. "So you think—" and he hung fire again.

"Huh! I think you'd better git Dan Willis out o' this town, Abe, an' inside o' five minutes of you can do it."

Johanson drew a breath of evident relief. "I can do it, Pole, and I'll act by your advice," he said. "Thar's only one thing on earth that would terrify Dan towards home, but I happen to know what that is. He's billie's hot, but he ain't anxious to stir up the Grand Jury. I'll go see 'im now."

As Johanson moved away, Pole Baker rose and slouched off in the darkness in the direction of the straggling lights along the main street. At the gate he paused and waited, his eyes on the wagons and camp-fire he had just left. Suddenly he noticed something and chuckled. The horses passed between him and the fire—they were being led round in the hitched to the wagons. Pole chuckled again. "I'm not sech a dern fool as I do have fits," he said.

CHAPTER III

THE wide avenue which ran north and south and cut the town of Darkey into halves held the best and oldest residences. One side of the street caught the full rays of the morning sun, and the other, the standing red beams of the afternoon.

Henry Dwight, the wealthy sire of the young man with whom the foregoing chapters have principally dealt, lived in one of the moss and ivy green houses on the eastern side of the avenue. It was a red brick structure two and a half stories high, with a Colonial veranda, and had a square, white-windowed cupola as the apex of the sloating roof.

Henry Dwight was a grain and cotton merchant, a money-lender, and the president and chief stockholder of the Darkey Cotton Mills, whose great brick buildings and cottages for employees stood a mile or so to the west of the town. This morning, having written his daily letters, he was strolling in his grounds with a cigar. To any one who knew him well it would have been plain that his mind was disturbed.

Adjoining the Dwight homestead there was another ancestral home equally as spacious, and standing in quite as extensive grounds. It

was here that Major Warren lived, and it happened that he, too, was on his lawn just beyond the ramshackle intervening fence, the gate of which had fallen from its hinges and been taken away.

The Major was a short, slight old gentleman, quite a contrast to the John Bull type of his lanky, side-whiskered neighbor. He wore a dingy brown wig, and as he pattered about, raising a rose from the earth with his gold-headed ebony stick, or stooped to uproot an encroaching weed, his furtive glance was often levelled on old Dwight.

"I declare I might as well," he muttered, undecidedly. "What's the use making up your mind to a thing and letting it go for no sensible reason? He's taking a wrong view of it. I can tell that by the way he puffs at his cigar. Yes, I'll go."

The Major passed through the gateway and slowly drew near his preoccupied neighbor.

"Good morning, Henry," he said, as Dwight looked up. "If I'm any judge of your twists and turns you are not yet in a good humor."

"Good humor? no, sir, I'm not in a good humor. How could I be when that young scamp, the only heir to my name and effects—"

Dwight's spleen rose and choked out his words, and, red in the face, he stood panting in impatient rage.

"Well, it seems to me, while he's not my son," the Major began, "that you are—well, rather overbearing—I might say unforgiving. He's been sowing wild oats, but really, if I am any judge of young men, he is on a fair upward road—to do genuine manhood."

"Road to nothing," spluttered Dwight. "I gave him that big farm to see what he could do in its management. Never expected him to work a lick—just wanted to see if he could keep it on a paying basis; but that's an investment of dead capital. Then he took up the law. He did a little better at that along with Bill Garner to bran on. They he went into politics."

"And I heard you say myself, Henry," the Major ventured gently, "that you believed he was cut out for a future statesman."

"Yes, and like a blundered fool I hoped for it. I was so glad to see him really interested in it that I lay awake at night thinking of his success. I heard of his popularity on every hand. Men

came to me, and women too, telling me they loved him and were going to work for him against that jack-leg lawyer, Wiggin, and put him into office with a majority that would ring all over the State; and they meant it, I reckon; but what did he do? In his stubborn, bull-headed way he abused those mountain men who took the law in their hands for the public good, and turned them against him in droves, and all for a nigger—a lacy, trifling nigger boy, Warren—the son of your own slaves."

"Well, you see," Major Warren began, lamely, "Carson saw Pete the night he was whipped so severely and took pity on him. They played together when they were boys, as boys all over the South do, you know; and then, he saw Linda break down over it, and saw old Lewis crying for the first time in the old man's life. I was mad, Henry, myself, and you would have been if you had been there. I could have killed the men who did it, so I understand how Carson felt, and when he made the remark Wiggin is using to such deadly effect to his prospects, my heart warmed to the boy. If he doesn't succeed as a politician it will be because he is too genuine for a tricky career of that sort. His friends are trying to get him to make some statement that will reinstate him with the mountain

Illustration by W. H. Bennett

"Didn't the idiot wait in Blackburn's store for Dan Willis to come out and shoot the top of his head off?"

people who sympathized with the whitecaps, but he simply won't do it."

"Won't do it? I reckon not!" Dwight blurted out. "Didn't the fellow wait in Blacklock's store for that Willie to come and shoot the top of his head off? He sat there till past midnight, and wouldn't move an inch till actual proof had come that Willie had left town. Oh, I'm no fool. I know a thing or two. I've watched him and your daughter together. That's at the bottom of it. She sat down on him before she went off to Augusta, but her refusal didn't alter him. He knows Helen is daft about her old negro mammy, and in her absence he simply took her cause and is fighting mad about it—so mad that he is blind to his political ruin. That's what a man will do for a woman. They may she's about to become engaged down here. I hope she will, and that he will have pride enough when he hears of it to let another man do her fighting, and one with nothing to lose by it."

"She hasn't written me a thing about any engagement," the Major answered, with some animation; "but my sister highly approves of the match and writes that it is likely to happen. Mr. Sanders is a well-to-do, honorable man of good birth. She never seemed to get over her brother's tragic death. She loved poor Albert more than she ever did me or any one else."

"And I always thought that it was Carson's connection with your son in his disquieting mind that Helen smelt him. For all I know she may have thought Carson actually led Albert on and was partly the cause of his sad end."

"It may really be that way," the Major said, musingly. "They had now reached the porch in the rear of the house, and they went together into the great white hall. A colored maid, with a red turban like a turban round her head, was dusting the walnut railing of the stairs. Passing through the hall, the old gentleman went into the library, a great square room with many windows and tall, gilt-framed pier glass."

"Yes, it may be as your say," Dwight said, sharply; "and that is where, between you and Helen, I got mixed up. Why do you always take up for the scamp? It looks to me like you'd resent the way he's acted with your son after Albert's terrible end."

"There is a good deal more in the matter, Henry, than I ever told you about," the Major Warren's voice faltered against him, that is my secret trouble. I reckon if Helen was to discover the truth—all of it—she would never feel the same towards me. I think maybe I ought to tell you. It certainly will explain why I am so much interested in your boy."

They sat down, the owner of the house in a revolving chair at a long, carved mahogany table covered with books and papers, the visitor on a lounge near by.

"Well, it always has seemed odd to me," old Dwight said. "I couldn't exactly believe you wanted to bring him and Helen together, after your experience with that sort of man under your own roof."

"It is in this way," said the Major, awkwardly. "To begin with, I am sure, from all I've picked up, that it was not your son that was leading mine on to dissipation, but just the other way. Henry, I want to talk to you about it because it seems to me you are in the same position in regard to Carson that I was in regard to my poor boy, and I've prayed a thousand times for pardon for what I did in anger and haste. Henry, listen to me. If ever a man made a great mistake I did, and I'll bear the weight of it to my grave. You know how I worried about the way Albert was conducting himself. Time after time he made promises that he would turn over a new leaf, only to break them. Well, it was on the last trip—the fatal one to New York, where he had gone and thrown away so much money. I wrote him a severe letter, and in answer to it I got a polite one saying he was

sick and tired of the way he was doing, and begging me to try him once more and send him money to pay his way home. It was the same old promise, and I didn't have faith in him. I was cross, unfair, unjust, to my only son. I wrote and refused, telling him that I could not trust him any more. Well, inspired that letter, Henry—the devil whispered to me that I'd been indulgent to the poor boy's injury. Then came the news. When he was found dead in a small room on the top floor of that squalid hotel—dead by his own hand—my letter lay open beside him."

"Well, well, you couldn't help it," Dwight said good awkwardly, and he crossed his short, fat legs and reached for an open box of cigars. "You were trying to do your duty to the best of your ability."

"Yes, but my method, Henry, resulted in misery and grief to me and Helen that can never be cured. You see, it is because of that awful mistake that I take such an interest in Carson. I love him because Albert loved him, and because sometimes it seems to me that you go most too far in condemning him. Oh, he's different! Carson has changed wonderfully since Albert died. He doesn't drink to excess now, and Bill Garner says he has quit playing cards, having only one aim, and that to win this political race."

"Win the race?" Dwight snuffed. "He's already as dead as a salt mackerel—dead stiff and dark by his own bad-headed stupidity. I've always called down drinking and card playing, but I have known men to succeed in life who had such habits in moderation; but you nor I nor any one else ever saw a block-head succeed at anything. I tell you he'll never make a politician. Wiggin will beat the hind sight of him. Wiggin is simply making capital out of Carson's inability to control his temper and sympathies. Wiggin would have let that mob thrash his own father and mother rather than antagonize them and lose their votes. He knows Carson comes of fighting stock, and he will continue to egg him and others on, knowing that every row Carson has on that line will make a crowbar for him by the score."

When his visitor had gone, Dwight dropped his unfinished cigar and went slowly upstairs to his wife's room. At a wide window overlooking the flower-garden, on a couch, supported in a reclining position by several fluffy pillows, was Mrs. Dwight. She was, even in her past middle age, of an extremely delicate physique. Her hair was snowy white, her skin thin to transparency, her veins frail and blue.

"That was Major Warren, wasn't it?" she asked.

"Yes," Dwight answered, as he went to a little desk in one corner of the room and took a paper from a pigeon-hole and put it into his pocket.

"How did he happen to come over so early?"

"Because he wanted to, I reckon," Dwight started out, impatiently; and then a note of caution came into his voice as he remembered the warning of the family physician against causing the patient even the slightest worry.

"Somehow I fancied it was about Carson," Mrs. Dwight sighed. "I'm so worried about Carson's campaign that I imagine all sorts of trouble. I lay awake nearly all night thinking about one little thing. When he was in his room dressing the other day, I heard something fall to the floor. Hilks had taken him some hot water for shaving, and when she came back she told me he had dropped a revolver out of his pocket."

"You needn't let that bother you," Dwight said; "nearly all the young men carry them because they think it looks smart." "Well, my boy will never have any use for one," the invalid said. "He is not of a quarrelsome nature. It takes a good deal to make him angry, but when he gets so he is not easily controlled."

To be Continued.

THE SPOTS ON THE SUN

By JOHN KENDRICK BANGS

Twinkle, twinkle, little spot, how I wonder what you're set!—Old Poem

I wonder what those spots upon
Our ever-glorious, golden sun

May be?
It hath occurred perchance to me
The great and gorgeous orb of day
Hath caught the measles—no can say?

Perchance the spots are freckles for
Next minute me minus the cheeks,
Where yearly my Belinda goes
To gather them upon her nose.

A chap I know in Pittsburg, Pa.,
Asserts that they are sun-drops, and
Huge heaps of sand that have arise
From local whirling marts of biz.

Down Kingston way the folks assert
They're pretty sure they'll do no hurt,
Because they dream them like the lamb-
Likes jokes of Mister Sweetenham.

Ben Tilman, when I asked him what
He thought about the solar spot,

Refused to answer—sawed me back—
Because forthwith the spots were black!

A scholastic of highest class
Avores they're made of natural gas
Arising from the Verbi gize
Of hymn and of leveridge.

A very yellow journalist,
Who's something of a peevishist,
Asserts that like our filthy men
We also have a tainted sun.

Some people say—but I don't think—
They're drops of Presidential ink
That Theodore has fung so high
They're splattered all the blooming sky.

And so it goes—
Nobody knows
Just what those solar spots may be.
They may be fakes,
Or merely lakes,
The "Gift of Andrew Carnegie."

(Continued from page 737.)

dire threats of bombardment if an ancient American goat be not restored to its legal owner.

And mind, they're at me out of office hours as well as within them. If I permitted, their woes would fall into my soup at dinner; their shadowy sighs would stalk in my towered bedroom. But—Lord bless you—I closed my house door upon them long ago. I meet them now on the beach by the white-dome Sahnthouse. I bow to France and Germany, to Great Britain and Italy, Austria and Denmark; I kiss fellows, with pith helmets and vast side-plate mikes on fire. Great Britain wears gloves and uses a saddle from Piccadilly!

That our club was a dreadful failure wasn't surprise you; the smaller the colony, the more unamiable the men. They don't ever get a consul on this trip or you'll never stop him. That poor miserable club! There were questions of precedence and codes that made a coronation look like a kid's picnic.

Germany wouldn't sit in the same room with Servia—who had "done time" at home and was really a noted scoundrel. The trade of his country (the new half Portuguese and half Arab) didn't amount to a row of pins; but his flag made a bunch of money for him, with bogus "protection" on a huge scale. Then A declared he cheated him through his Jew grubstake broker, and left the clubhouse. And so it all fell to pieces. Women at the back of the trouble, of course.

I stroll home to a wined dinner (I'm used to anything now) at 7:30; play a game of billiards from 8 till 10, and then back to bed, past the vast dim-lit mosque, with its rustling palm gardens, to dream that the grateful President and enthusiastically cabinet proved my hand with emotion, and appointed me ambassador to the Court of St. James's!

Ruled Out

"When I rule the university
Shall have with my diploma, see
My rule the universe!" said he.
Alas! he'd no diploma.

J. ABRAHAM STRAWSON.

The Pace that Kills

"It's a new invention," remarked the minor-dweller. "This machine contains a small life-robot."

"Doesn't attract me," replied Speeder. "I never stop to pick up the things I kill!"

Fine

A Southern lawyer tells of a judge in Arkansas who had several "lives" with a lawyer retained by a woman who had instituted a breach-of-promise suit in the court presided over by the judge in question.

After each exchange of repartee between his honor and the imprudent counsel, the judge would say:

"Clerk, just enter another fine of \$10 against Mr. Mitchell for contempt of court."

When this sort of thing had proceeded further than counsel wished, he addressed his honor in this way:

"If your honor please, I am a good fellow, and as such, intend to obey the orders of the honorable court in this, as in all other instances. Now, your honor, it so happens that I have not about me the sum of \$30, for which I have been assessed for contempt. Therefore, I shall be compelled to borrow such sum from some friend; and I see no use present whose friendship I have enjoyed so much as your honor's. So I make no objection in approaching your honor for a loan to square my share assessed against me."

With just the faintest smile about his lips, his honor looked first at counsel and then at the clerk.

"Clerk," said he at last, "omit Mr. Mitchell's fine. The State is better able than I to lose \$30."

Hot Water Runs Before Your Match Goes Out

Gas burns only while hot water runs. Shutting off water stops off gas—no waste of gas—no limit to water supply.

The Humphrey Instantaneous Bath Water Heater

will last a lifetime. Can't get out of order. Can be installed wherever there is water and gas supply. Turn on gas and it is in the hottest and most satisfactory condition of hot water, we will send it to any housekeeper, freight prepaid.

On 30 Days' Free Home Test.

If it doesn't "make good," let it remain as arranged in our demonstration, return it and get your money back without fault or argument. For details see our pamphlet "The Hot Water Heater by Humphrey," sent free by mail. Humphrey can select best out of 100 after 30 Days' Home Test of our bath.

A MOTOR-TRACTOR TO DO THE WORK OF THIRTY-SIX HORSES

THIS MOTOR TRACTOR MAY BE USED FOR PLOWING, FOR HAULING A HARVESTING MACHINE AND REAPER, FOR DRIVING A THRESHING MASH, OR ANY OTHER FARMYARD MACHINE, OR CAN BE EMPLOYED TO CARRY TWO TONS IN A LOWRY BODY WHICH IS PLACED ON THE REAR PORTION OF THE MACHINE, AT THE SAME TIME HAULING A LOAD OF SIX TONS. DURING RECENT TRIALS IN BEDFORDSHIRE, ENGLAND, AN ACRE OF GROUND WHICH HAD BEEN RENDERED VERY ROUGH AND PLASTIC BY THE SEVERE FROSTS WAS PLOWED AND CULTIVATED IN ONE HOUR; THE AMOUNT OF WORK DONE BEING MORE THAN THE AVERAGE FOR A DAY'S WORK WITH A HORSE-DRAWN PLOUGH. IT PLOWED AT A SPEED OF $3\frac{1}{2}$ MILES PER HOUR, AND ON A HIGHWAY CAN DRAW 8 TONS 5 MILES PER HOUR.

CELEBRATING SHAKESPEARE'S BIRTHDAY AT STRATFORD-ON-AVON

THE CROWD AWAITING ADMISSION TO THE THEATRE DURING THE CELEBRATION. THE STREETS OF THE TOWN WERE DECORATED, AND SINGERS AND DANCERS IN APPROPRIATE COSTUMES PARADED THE HIGHWAYS.

The Whole—Family

Those who preach for American expansion in Latin America always have something to say about the ignorance among Americans of the customs, habits, and laws of the Latins, and cite this ignorance as one of the greatest reasons why American trade is not greater with the countries to the south. All this is very true, and few Americans understand the Latins thoroughly. Some of the encounters Americans have with the laws of foreign countries are sometimes amusing.

When Frank Steinhart, the American Consul-General at Havana, went to Porto Rico as a part of the American occupation, shortly after the Spanish war, he lived in San Juan. In the house next to the one in which he had his quarters there lived a native family. It was a large one, too—father, mother, half a dozen children, a couple of mother-in-law, and one or two others. There was one young scortista of eighteen, who was particularly attractive. Mr. Steinhart became acquainted with the entire family and grew to know them well.

One day it was announced that a circus was coming to San Juan. Now San Juan isn't such a big place, and they don't have circuses there so very often. Every one intended going, and Mr. Steinhart innocently asked the young lady to go with him, just as he would back in the States. She consented, and he agreed to call for her at a certain hour.

He went to her home at the proper time, and there he met with a surprise that caused him to clutch for his pocket-book. The entire family, from baby up to grandma, was waiting for him to come. All were dressed in their finest, and looking forward to a pleasant evening at the circus.

The unfortunate American was amazed, and he drew the young lady aside.

"Am I supposed to take the whole family to see this show?"

"Yes, indeed," the scortista replied.

"But why—in that customary?" he asked.

"Why, of course," she explained; "you see, I am only eighteen, and if you should take me away from my home to the circus alone my parents would have you arrested for abduction. This is the law. If I were twenty-three, of age, that is, it would be different, but being only eighteen your invitation includes the family. I couldn't go with you alone."

They went to the circus, at a cost of many pesos, and Mr. Steinhart realized that there after he would always ascertain a young lady's age before extending invitations of any sort.

She Was Here, Anyhow

THE negroes of the South, especially those of the old regime, have retained many original figures of speech. One of their peculiarities when accented as to their state of health is always to say "Thank God," whether "for better or for worse."

One of the best of these came to notice the other day.

"How y'all?" (you all) called one old negro to another across the street.

"Thank God, I ain't much, but I *ayars*," replied the other, who indeed seemed very much "hyar" as she pried the brown to the pavement.

The Long Wait

MISS NYE when a young man once made an engagement with a lady friend of his to take her driving of a Sunday afternoon. The appointed day came, but at the livery-stable all the horses were taken out save one old, shabby, exceedingly lame horse.

Mr. Nye hired the nag and drove to his friend's residence. The lady let him wait nearly an hour before she was ready, and then on viewing the disreputable outfit flatly refused to accompany Mr. Nye.

"Why," she exclaimed, severely, "that horse may die of age any moment."

"Madam," Mr. Nye replied, "when I arrived that horse was a practicing young stud."

Where Good Dogs Go

(Being certain Impressions of the Hereafter by Susan, et al. Five Years)

Mr old dog Shep, so kind and bold,
Is sick a d-d-r-f-u-l lot,
For all dogs' noses should be cold,
And his poor nose is hot,
He's tired all day and will not play,
And, oh! it makes me cry,
For des suppose that lost old nose
Should make dear Sheppie die!

(If old Shep goes away from me,
A orphan girl is what I'll be!)

He won't go with me when I drive,
He moves des like a snail,
And not a wootle wag's alive
In his big bushy tail; good dogs go—
He lies around upon the ground,
Des like a pile of log,
And when one cures, it's sad that there's
No heaven for a dog.

(At least that's what some folks say,
But I can't believe it's des that way.)

Those folks think that Shep won't be
In heaven when he's dead,
But this does not seem true to me,
For last night from my bed
Pa showed me far up high a star,
Des as the clock struck seven,
And now I know where good dogs go—
The Dog Star is their haven!
EAGLE HOOKER EATON.

Methods

HOMER-MAIR, ice-cream was a regular item on the bill of fare at Willie's house, and while he liked the cream he drew the line at turning the freezer. One day when his mother returned home she was agreeably surprised to find him working at the crank as if his life depended on it.

"I don't see how you got him to turn the ice-cream freezer," she said to her husband. "I offered him a dime to do it, and he just laughed at me."

"You didn't go about it the right way, my dear," replied her husband. "I let him a nickel he couldn't turn it for half an hour."

Trees that Yield Good Soap

CONSUL-GENERAL RICHARD GLENNER makes the following report from Frankfurt, Germany:

Mr. R. Lang, of this city, councillor of commerce and delegate to the government of Algeria, states that he has just returned from a commercial tour of study in Algeria, where he was called by that government. During his trip he met one of the largest land proprietors, M. S. Bertrand, chairman of the Algerian Agricultural Society at L'Arba, near Algiers, whose domain comprises many thousands hectares (hectares, 2.471 acres), which are planted with vines, oranges, olive and soap trees. He has succeeded, after numerous experiments, in cultivating a large plantation of soap-trees, from which he gathers several thousand tons of berries annually. The soap-tree resembles an apple-tree of medium growth. The fresh fruit is green, the interior of which, besides the kernel, contains a yellowish, gelatinous, sticky substance. The fruit used for making soap contains three times as much soap as the "peponia" wood. It was destined to be of great service to the cloth and linen manufacturers, and, above all, for domestic purposes, as it can be used to clean linen and silken fabrics and colored embroidery. The colors are in this way renovated, whereas the use of ordinary soap makes them run together.

Forestalled

Mrs. CRAWFORD. "Why was your husband more angry than usual when he came home so late?"

Mrs. CRAWFORD. "You see, dear, I woke up before he had time to set the clock back."

Model 69, With Top, \$1,325; Without Top, \$1,250

The noiseless herring-bone gear used on Pope-Waverley electric is one of the features which has made it the most popular carriage in the electric field, and the envy of manufacturers of other electric cars.

All our carriages are equipped with a series-wound motor which is self-regulating under various loads. It automatically adjusts the consumption of power to the load; thus, with a light load, it will consume a smaller amount of current. As the load increases, power sufficient for the demand is constantly absorbed, thus enabling the motor to take extreme overloads with high efficiency.

The Cruise of the *Shining Light*

By NORMAN DUNCAN

SOMEWHAT like Dickens, somewhat like Stevenson, somewhat like Barrie is Norman Duncan's remarkable new novel. And yet Mr. Duncan's story is absolutely unlike any of the stories of these great writers. It is so original as to be absolutely unique—a story of mystery, of love, of quaint humor and vigorous action. It is not a story of the sea.

It is a story full of real characters that will live—the boy Dannie, about whom a veil of mystery hangs and in whose love story the book ends—an old man, Nicholas Top, who brings the boy up to wear jewels and fine clothes, to be a gentleman after the rules of Lord Chesterfield, and to look down on his strange guardian—a girl, Judith, whom Dannie loves from childhood, and the story of whose first kiss is as tenderly and quaintly humorous as anything in modern literature.

A powerful story, a lovable story—a story that is full of fine, manly, religious feeling—a story that holds one as the great old-time novels hold, and demands more than a single reading.

THE COMPLETE WRITINGS OF Henry Fielding

Comprising the Original
Text of His Novels,
Plays, Poems, and
Miscellaneous Writings

HENRY FIELDING

*Edition de Luxe—Complete
in 16 Volumes—Limited to
1000 Numbered and Registered
Copies.* ❧ ❧ ❧ ❧

THIS is the first attempt to provide a complete and definitive edition of the writings of Fielding, "the father of the English novel" and the author of perhaps the most notable novel in English literature—*Tom Jones*. It also contains an *Essay on the Life, Genius, and Achievements of Fielding*, by the late William Ernest Henley; a valuable genealogical paper on *The Descent of Fielding*; a complete Bibliography of the First Editions of Fielding's Works; Lists of Characters prefixed to each novel, etc., etc. No pains nor expense has been spared to bring together every possible aid for an intelligent understanding of the famous author, his writings, and his times.

Every possible print and engraving bearing upon Fielding's life and work has been reproduced for this edition. There are caricatures by Hogarth, full-page illustrations from the paintings by Rowlandson, Corbould, Stothel, Buel, Hulett, Cruikshank, Rooker, and other of the great eighteenth and nineteenth century artists who have vied in illustrating Fielding. Through the courtesy of the British Museum, thirty of the quaint title-pages of the first editions of Fielding's works have been reproduced in facsimile. The illustrations comprise over 100 full-page plates and photogravures on Japan paper, including facsimiles and reproductions of old titles. Each volume is embellished with an engraved title-page after a design by Corbould.

The work is printed from a beautiful Roman type, specially cast for this edition. The press-work is the best that modern printing can produce, and every detail of manufacture is in keeping with the general high character of the work.

This de luxe edition, in 16 crown-octavo volumes, is limited to 1000 copies. It is printed on fine laid paper, with deckled edges, and watermarked with Fielding's name. The volumes are bound in rich red buckram, with paper labels, gilt tops, headbands, etc. The greater part of this limited edition has been disposed of. The remaining set will be sold uniformly at a price of \$40.00 per set while they last. Descriptive circular mailed on application.

OUR OFFER

On receipt of \$3.00 we will send you, all charges prepaid, THE COMPLETE WRITINGS OF HENRY FIELDING, in 16 volumes, limited de luxe edition. If you do not like the books when they reach you, send them back at our expense and we will return the \$3.00. If you do like them, send us \$3.00 per month until the price, \$40.00, is paid.

COMMENT

Ohio is Unharmonized Again

REPUBLICAN political harmony in Ohio is again upset, after bright prospects of reestablishment. For a few days it was understood that Senator FORAKER and all the Ohio Republicans concurred in hoping for the nomination of Secretary TART for President. Gladdened by the prospect of a happy union of rival interests and an equitable division of political assets, Senator DICK, as chairman of the Ohio Republican State Executive Committee, sent out a call to the members of the State central and executive committees, to the chairmen of the county committees, the elective State officers, and Republican Congressmen to assemble for a peace conference at Columbus on May 15. But hitches intervened. The FORAKER contingent was willing to endorse TART for Presidential candidate, but the TART party refused to reciprocate by endorsing FORAKER for Senator. Therefore on May 12 Senator FORAKER issued an announcement that he would not stand by any conclusion reached or arrangement made at the proposed Columbus peace conference, and that while he loved peace, since the friends of Secretary TART seemed indisposed to vouchsafe it to him, he thought the effort to achieve it had better be deferred until the next State convention. After the next November elections, Senator FORAKER said, he would ask the State Committee in issuing its call for the State convention "to provide that the delegates shall be elected from the various counties at primaries duly held under the statute in such case applicable, to the end that the voters themselves may have an opportunity to determine, as they should, what is to be done as to all matters in which they will at that time be interested." Meanwhile, the Senator said, he would not regard as binding on him or any of his friends any action taken by anybody not specifically authorized to settle questions for the Republicans of Ohio. Senator FORAKER having thus expounded his sentiments, Senator DICK issued an explanation that the proposed Columbus peace conference had not been intended to bind anybody or do more than promote an exchange of views and some resulting conclusion as to harmonious action. But since the purpose of the meeting had been misunderstood by some, and misrepresented by others, and no longer promised to promote party harmony, he called it off. Political conditions in Ohio are therefore restored to the status quo ante, and the Buckeye Republicans are again inharmonious, and apparently rather relieved at getting back into that unfettered state.

The Machine and Governor Hughes

In New York the eagerness of the Republican machine to put an apparent end to all discussions and to unite behind Governor HUGHES is illustrated by the action of the State Committee in endorsing the plans and policies of the Gov-

ernor. This is not to be taken as evidence that the machine men have been converted to the policies of the President and the Governor on the merits of the issues, but that they have come to the conclusion that party unity is necessary; that the rank and file of the party believe in and support Mr. ROOSEVELT and Mr. HUGHES, and that, as Mr. ONELL says, the boys are all eager "to climb on the band-wagon." This harmony has been generally received as a great gain for political virtue; but, in fact, it is never really such a gain when harmony is obtained for any reason other than the intellectual conviction of those who surrender their beliefs to the prevailing faction, or section, of a party. We are speaking mainly of a forced harmony, or a harmony brought about by considerations of policy, on questions of principle. Even a harmony resulting from the conviction of the boys who are naturally bad that, for a season at least, they had better be good is not matter for great rejoicing. It may safely be said, notwithstanding the action of the State Committee, that the "boys" in thinking and in manners remain what they were. They have not changed. We recall the fact that when ONELL was made Governor the saintly aspect of his promises led one distinguished independent newspaper to assert that he would be a better and more wholly virtuous Governor than ROOSEVELT had been; but it did not take the newspaper long to discover that ONELL's promises had not changed his character. How far ONELL's present sentiments remain those of the old Governor is shown by his resolution recommending Governor HUGHES as the Republican candidate for President in 1908, and naming him as New York's favorite son. As he scrambled on the band-wagon he could not refrain from an attempt to embarrass Governor HUGHES, to worry Mr. ROOSEVELT, and to discomfit Mr. WOOLBART.

The Next Issue

It is perfectly obvious that the real issue in the next Presidential contest will be, if it is not obscured by astute politicians, between our written Constitution and no Constitution at all. The only manner in which such manipulation can be successful will be through concealment of the true purpose of those who desire to put an end to the trammels of the written Constitution. There is, however, abundant evidence of the existence of a profound sentiment in the minds of many politicians, and of some others, that the Constitution is worn out. This feeling has been accentuated by the legislation, enacted and proposed, in some States that have made desperate efforts to satisfy Mr. ROOR's idea that their rights will be taken away from them if they do not employ them as the administration thinks that they ought to be employed. It is evidently thought to be perfectly safe for one who seeks the favor of the people at the polls to recommend unworthy conduct towards the fundamental law. The letter of Judge FARER lends strength to the suggestion that many men have concluded that the Constitution must no longer be permitted to stand in the way either of a large increase of the powers of the nation at the expense of the States, or of a comprehensive extension of national paternalism over the business and social relations of the country.

Indirect Attacks on the Constitution

It would be well if those who think that the Constitution should go would meet the issue fairly; but they show their own lack of confidence in their argument by devising pretences by means of which the Constitution may be abolished by indirection. Judge FARER suggests that the commerce clause be abandoned, and that those who desire not only national regulation, but national control of commerce, resort to the post-office and post-roads clause. This would be an indirect, and, therefore, not highly honorable, way to put completely under the power of the national government, directly or indirectly, all instrumentalities of production as well as of transportation. Judge FARER and others would destroy the Constitution by devious methods, as Mr. ROOR would destroy it by belittled constructions, and as Senator BREWSTER would destroy it by legislation. Here is undoubtedly a subject for serious debate. There is involved the proposed destruction of the Federal theory, and the proposed abandonment of the written Constitution. The only manly way to accomplish this end is by open discussion before the people whose law the Constitution is, and who alone possess

the power to amend or reject it. Why will not the foes of the Constitution come out into the open? If they will not, why do not the friends of the Constitution drag them out? At any rate, the real issue is this, and it has been made apparent by the recent attempts of certain speakers and writers to point out how their end may surreptitiously be gained even while they walk around the instrument with a hypocritical reverence for it in words and manner.

Direct Election of Senators

Senator BOURNE of Oregon is in the habit of saying that he was elected by the direct vote of the people of his State. He was chosen under the law which provides that candidates for United States Senator shall be voted for at State elections, and that the name of the candidate then receiving the largest number of popular votes shall be laid before the Legislature when the time for formally electing the Senator under the Federal law shall come. This law to enforce the will of the people is not singular. Other States have adopted similar statutes. In Rhode Island a political party is now undertaking to do what is sought to be accomplished in other States by law. The Rhode Island Democrats have taken steps to ascertain the popular favorite for Senator, and to secure the election of members of the Legislature who will vote for him. They called a convention for the 23d of May to determine upon a proper candidate for the Senate and to take the steps to secure the election of legislators who would support him. It is said that the man will be GORDON.

Marse Henry's Candidate—Who?

MARSE HENRY WATTERSON has a Democratic candidate for President. Qualifications, these: a good organization Democrat who supported the ticket in 1896; without entangling alliances with any of the money powers; without any antecedents which could drive away conservative Democrats; does not live east of the Alleghenies, nor north of the Potomac and the Ohio. These are negative qualifications—no more than the clothes of the man. If the man is the right man, the Democrat will not think much about his clothes. Whoever MARSE HENRY may have in mind, one preliminary conclusion that he has reached is important. He is in favor of having Mr. BRYAN exert himself to procure the nomination of some Democrat who has a chance of being elected. That much, in Colonel WATTERSON'S opinion, Mr. BRYAN owes to the South—the South which is disaffected to the proposed BRYAN remedies for national disorders, is a unit against government ownership and the initiative and referendum, and with one voice says, "Back to the Constitution."

Watterson's Republican Ticket

As to the Republican ticket, it is Colonel WATTERSON'S guess that it will be:

For President,
CHARLES E. HUGHES, of New York.
For Vice-President,
JOSEPH G. CANNON, of Illinois.

Back of this guess is the opinion that "the talk about a 'third term' being the purest nonsense . . . the best the President can hope for in the next convention . . . is a dog-fall." A dog-fall is one in which neither wrestler gains any advantage. The Colonel does not think the President will win with TAFT, nor that the "reactionary" element can nominate FORAKER or FURBERG. The convention, he guesses, will not want HUGHES, but will have to take him. This opinion lodged in MARSE HENRY'S mind about a year ago, and seems to have been strengthened by foreign travel and scrutiny of the United States from across the seas. It was communicated to mankind from Paris last month on the eve of its author's return to Kentucky.

The British Colonies Rebuffed

It seems to impartial onlookers that the British government went a little too far in rejecting the ultimate proposal of the colonial premiers, who had been patiently conferring in London, and who, while they received effusive hospitality, had as yet secured no substantial boon. Of course, even Mr. DEAKIN, Premier of the Australian commonwealth, could not expect, though he earnestly pressed it, the concession of a preferential tariff for the colonies in respect of food staples and the raw materials of manufacture

which are now on the free list, for he knew that it was as supporters of free trade in these articles that the Liberals had gained an overwhelming victory at the last general election. Something, however, the BANNERMAN government might do for the colonies without violating its promise that the cost of the necessities of life and industry should not be in the least augmented. There are a number of articles classified as luxuries, articles not produced in the United Kingdom, which are now subject to taxation under the British system of a tariff for revenue only, and which, as a matter of fact, are more or less heavily taxed. Among these articles may be mentioned tobacco, wines, tea, coffee, and sugar. Why, from the viewpoint of imperial federation, should not the excellent tea grown in northeastern India and in Ceylon receive a preference in the British market, as compared with the tea of China and Japan? Why should not a similar preference be given to colonial coffee? The berry might be produced in British Guiana, British Honduras, and Jamaica, and, if stimulated by a preference, the coffee industry of Ceylon might be revived, if a remedy could be discovered for the blight which annihilated the crops of that island some years ago. Excellent wine is made in Cape Colony, in Cyprus, and in Australia. At least as good tobacco can be produced in Jamaica and other islands of the British West Indies as is now procured from Porto Rico. As for sugar, a preference in the British market for the colonial output of that commodity would go far to restore all the British West Indies to prosperity, and there is no doubt that beet-root sugar could under such conditions be produced profitably in parts of Canada. Nevertheless, although all the colonial premiers assembled in London—with the single exception of General BORUA, the representative of the Transvaal colony—voted that the home government should be urged to grant the colonies a preferential tariff on imports which already paid duties, the request was rejected. Apparently Premier BANNERMAN and his colleagues did not want to establish even the semblance of a precedent, but, in our opinion, there is no analogy between luxuries not produced in the British Islands on the one hand and the necessities of life or the raw materials of manufacture on the other.

The Franco-Japanese Entente

France and the Japanese have come to an understanding, and French capital is to be furnished for the development of Japan. This means that French money is to do for the island empire what might have been done by its own money before the war with Russia. However sound Japan's credit before the war, and however greatly it might have been impaired during the last days of the fighting, the peace made at Portsmouth has placed Japan among the nations that may borrow on liberal terms and whose friendship is worth paying for. The nations in the East that are more or less accord with one another are France, Great Britain, Russia, and Japan, while Japan's influence is dominant on the continent among Asiatic people. These various arrangements, in some cases formulated in treaties, sometimes consisting of understandings, or *ententes*, leave out the United States and Germany. There is, however, a great difference in the feelings of the combined powers towards these two outsiders. Since California was kind enough to cease from troubling, the United States may be regarded as the common friend of all, while the Kaiser's Germany is more or less suspected. Each of them has been so long afraid of Germany that there is a disposition among them to gloat over her isolation. Even Russia has not been without an occasional moment of dread of the Kaiser. One thing more is on the surface. It may be that Asiatics will continue to dream of Asia for themselves, but it is less probable than it was not so long ago, for the union of all these powers makes inevitable for years to come the spread of European influence over the Orient. The *entente* with France is itself evidence that the Japanese, masterful as they have shown themselves to be, are still the pupils of Western civilization, as they are still the debtors of Western capitalists.

Taxation of Colleges

As a censorious remark was made in these columns on the fealty to ignorance displayed, unexpectedly to the outside world, by the Massachusetts Senate, it is only fair to inform

those who did not know that the proposition was defeated by the Massachusetts House of Representatives by a vote of more than one hundred and forty to fourteen. This affair is an illustration of the mental and moral size of some legislators of modern times. The people of Massachusetts do not desire to tax education, but some active and minute minds in the few college towns of the State are at the bottom of the ungenerous and unintellectual movement. These minds being aggressive and busy in politics, a Senator who has one college town in his district feels that he can better afford to vote in accordance with the desires of the active college town than to express the passivity of the twenty or twenty-five non-college towns of his district. On the other hand, the mere Representative, not having the fear of those who would wring money from the colleges for their own benefit, is free to express his own views and the views of his own people. The relief from the fear of the burden of taxation is great. It is one of the boasts of New England colleges and universities that no young man shall be turned away merely because he has no money. This is not only the boast, but, in one way or another, it is vindicated. But some poor young men are forced to do so much to pay their way that their pursuit of education is greatly hampered. There is no college in New England that has sufficient money for the poor men who desire its teaching. A large part of the money given to the college is directed by the donors to be used for specific purposes, to construct or maintain buildings for designated purposes. What colleges chiefly need in the way of money is for better instruction and for larger charities, to the end that the time of the poor boy, while he is in college, may be devoted to the getting of the education that he seeks. Taxation of college property would ruin the teaching and abridge the charities—that is, would impair the usefulness of the institutions that are doing most for the civilization of the future.

The Predatory Deer of New England

It was the law of Massachusetts until very recently that no one should be permitted to shoot deer in the State until 1908. There had been such a law in Vermont, but it was modified. Now Massachusetts has been forced to acknowledge that the law may be too kind to the deer. These apparently pleasing animals have come to the conclusion that the State is theirs. They have been lately taking to nosing and butting the human kind out of their way. One or two of them, not having learned a lesson from the early opposition of buffalo to the Union Pacific trains, undertook, during the winter, to obstruct the progress of some Massachusetts trains. They found, however, even the slowest and most ineffective trains too much for them. They have long been pursuing school children and others on the highway; they have invaded the barnyards and even the barns to steal the fodder of respectable domestic cattle; they have poked their noses into the windows of farmhouses; they have eaten the cabbages and other green goods of farmers; they have galloped over lawns and down the village street; they have injured the greens of golf-links with their sharp toes; and they have caused much anxiety to the timid who love the seclusion of the woods, and who want their solitude to be real. Now the Legislature has lifted off the law, so that deer may be shot in Massachusetts this year. When these reckless animals discover, then, a year before they expected, that man with a gun is a dangerous enemy to them, and that their pranks are to be abbreviated, they may think themselves for their own trouble.

Defects of Young America

This is what President FAIRBANKS of Brown University has to say of the rising generation in the United States:

The young people of to-day, as compared with those of fifty years ago, are chiefly deficient in power of sustained attention and original thinking. They cannot, or at least they usually do not, think as clearly, as patiently, and as repeatedly, as did their fathers. They do not as quickly distinguish the irrelevant from the pertinent, the kernel from the husk, as the men of the last generation. They have an amazing fund of information; they are wide readers of bright ephemeral literature; they have tasted every fruit on the great tree of knowledge; they know a thousand interesting scraps; they are more versatile and ingenious and attractive than any other of the recent generations. But they are quickly led astray by sophistry, and easily led to erroneous conviction when it conflicts with interest.

This is an interesting opinion from one who year after year

observes successive groups of young men, and naturally receives impressions about their mental quality. We don't know whether or not Dr. FAIRBANKS' impressions are sound. He did not have under observation the youths of fifty years ago, and if he had had, it is possible that he would not have thought them more eager thinkers than our young people. But there are a number of things that help the probability that what he says is true. Education seatters very much more than it did fifty years ago. The chief work of the colleges then was to strengthen and develop the powers of the mind by classical and mathematical studies. Now, though a considerable proportion of the college students go as far as their fathers did, or farther, in those studies, the colleges teach a thousand other things, and make a much greater effort than they used to make to equip their students with "useful information." Moreover, American life to-day is undoubtedly more distracting than it was fifty years ago. It is a much more stimulated life. There is more to learn, more to do; there are more choices to make, and it is somewhat harder for the young to take and hold a course. It is an unsettled and unclassified life, so full of possibilities that young heads are prone to swim at contemplation of it. All that is an embarrassment of riches, and is not going to last forever. We will come in due time to a sadder and more settled social condition, in which the careers of the young will be planned out for them earlier and more definitely than now, and the special preliminary training will, perhaps, begin sooner. And doubtless it will be increasingly thorough. Competition will settle that.

The Idiosyncrasy of the Cigarette

Cigarettes engage the attention of American State Legislatures so persistently that any fact not generally known about them is worth imparting. It is often said that they afford rather a mild form of smoking, and that the tobacco in them is mere tobacco, and mild at that, and incapable of such crimes as are charged against it. That is true, and some of the Western Legislatures seem a little crazy about cigarettes, which, indeed, do great mischief to some children, but are not nearly so dangerous to grown-ups as Western legislators seem to think. But cigarettes are not mere rolls of tobacco. They are not drugged with expensive poisons, as is absurdly charged, but they have a peculiarity. The combination of burning paper and tobacco makes a chemical compound which is neither tobacco smoke nor paper smoke, but has a name which chemists know and a smell which everybody knows. There is not much of the new compound, but in what there is of it lies the idiosyncrasy of the cigarette.

The Right of Inequality

Speaking at New Haven of the socialistic demands for reorganization of society and limitation of the right of private property, and of the limitation upon individual opportunity as illustrated by some trade-union regulations, Secretary ROSS said:

A common benefit of property and a common standard of exertion are liable to be substituted for all inequalities of fortune and achievement. After many centuries of struggle for the right of equality there is some reason to think that mankind is now entering upon a struggle for the right of inequality. It remains to be seen how democracy will work under these new conditions.

That is a novel and striking phrase—"the right of inequality." The right itself is one of the most precious ones imaginable, and almost as essential to human progress and happiness as air or water or fire.

Smoking Automobiles a Nuisance

Automobiles ought not to smoke. When they do smoke it means that the chauffeur is incompetent and needlessly preface in his use of lubricating oil. Smoking automobiles are public nuisances, especially in the streets of great cities, where they poison the air, to the detriment of the health and comfort of the population. In Paris they are no longer tolerated. New York, too, will doubtless wake up presently to the fact that the public ought no more to suffer from the ignorance or neglect of chauffeurs in the regulation of their machines than from their propensity to run too fast. When we come to that stage of advancement, the smoking automobile will be sent home by the first member of the traffic squad that sees it.

Senator Rayner on Bryan's Policies

In the course of a long interview with the *New York Herald*, Senator RAYNER, of Maryland, whose remarkable speech at the dinner of the National Democratic Club on JEFFERSON'S birthday is well remembered, discusses the principal features of WILLIAM J. BRYAN'S political programme, and in a most cogent way demonstrates their utter irreconcilability with the doctrine hitherto regarded as Jeffersonian and Democratic. What are the four planks which Mr. BRYAN has recently declared ought to be and must be inserted in the next Democratic platform? They are, first, ultimate ownership by the Federal government of all the interstate railroads of the United States. Second, the initiative and referendum. Third, Congress must have the right arbitrarily to fix the total product of every interstate corporation, public, quasi-public, or private, and to destroy its business if the volume of that business shall exceed the limit prescribed by Congress. Fourth, Congress must have ample power to prescribe the terms upon which all interstate commerce shall be conducted, and whenever Congress (which practically means the dominant party) covers the interstate transportation of a given product to be against public policy—as, for example, the transportation of the product of a factory which violates the provisions of the child-labor bill—it shall have the right absolutely to prohibit commercial intercourse between the States upon the interdicted article.

As to the referendum and the initiative, we have formerly pointed out that to incorporate those institutions in our Federal organic law would require a constitutional amendment, and that it is extremely improbable that legislatures or State conventions in three-fourths of the States would ever sanction as radical a departure from the fundamental principle of representative government. We disclaim, therefore, this proposal of Mr. BRYAN as impracticable, even if it were desirable. It is the extent of the implied powers that Mr. BRYAN attributes to Congress to which Senator RAYNER particularly objects. In a recently published article, entitled "A New Law Necessary," Mr. BRYAN laid down the following proposition: "While Congress has no power to interfere with State corporations, so long as they confine their operations to the State in which they originated, it is within the scope of the powers of Congress to prescribe the terms upon which a corporation organized in any State shall engage in interstate commerce." Mr. RAYNER contends that Mr. BRYAN might as well assert that while Congress has no power to interfere with individuals, so long as they confine their operations to their own State, it is within the scope of the powers of Congress to prescribe the terms upon which they shall engage in interstate commerce. We are reminded that the commerce-regulation clause in the Constitution does not speak of corporations, and there is no distinction between corporations and individuals thereunder: the distinction that Mr. BRYAN tries to draw between individuals and corporations in his lately published article is not one that is recognized under the commerce clause of the Federal Constitution. Mr. BRYAN'S proposition ascribes the principle that is embodied in the child-labor bill, which principle has already been pronounced unconstitutional by a Republican committee of the House of Representatives, and which, in Mr. RAYNER'S opinion, has not the faintest chance of being approved by the United States Supreme Court. The more closely Mr. BRYAN'S proposition is examined the more astounding it seems. It means that all commerce between the States, from its creation or inception to its destination, is subject to the control of Congress to such an extent that, practically, Congress can prohibit it by prescribing the terms upon which it shall be carried on. Mr. RAYNER tells us that he has made a synopsis of the Federal decisions concerning the commerce clause of the Constitution, and has been unable to find any authority for such an assertion of boundless Federal centralization. Nor, with the solitary exception of Mr. REYNOLDS, has he ever heard any Senator give utterance to an idea so far-reaching.

Another of Mr. BRYAN'S doubtful interpretations of the Federal Constitution is that Congress has power to pass a law that would make it unlawful for any corporation to hold the stock of another corporation. Not for a moment does the Maryland Senator deny that it is inexpedient that a corporation serving the public, such as a railroad, should hold stock in a competing company, but he finds it hard to believe that any Republican Senator, except Mr. REYNOLDS, would concur with Mr. BRYAN in thinking that Congress has the power to pass a law that if any corporation shall hold stock in any other corporation, the corporation so holding the stock, and authorized by the charter of the State that created it to hold it, may be prevented by a Federal law from engaging in interstate commerce. Mr. RAYNER insists that a general policy of this sort would be disastrous, because, in cases where there is no competition, it might be conducive to the public interests that stock of one railroad company should be held by another company. Moreover, he challenges Mr. BRYAN to exhibit a single judicial decision which has ever held that, under the clause to regulate commerce, Congress can place an embargo on the products

of every corporation that holds stock of any other American corporation, and declare the holding unlawful. The fact is recalled by the Senator from Maryland that this very point was decided against Mr. BRYAN'S contention in the Northern Securities Company case.

Mr. BRYAN'S doctrine, plainly stated, is that every commercial transaction between citizens of different States is under the Federal Constitution subject to review by Congress, and that the Federal government has the right, as is asserted in the child-labor bill (of which Mr. REYNOLDS is the author, and of which Mr. BRYAN has declared himself in favor), to supervise the manufacturing establishments of any State, and dictate the kind of labor they shall employ, if the goods that they manufacture are to be permitted to pass beyond the borders of the State that produces them. Mr. RAYNER, on his part, maintains that all the volume of that business shall exceed the limit prescribed by Congress. Fourth, Congress must have ample power to prescribe the terms upon which all interstate commerce shall be conducted, and whenever Congress (which practically means the dominant party) covers the interstate transportation of a given product to be against public policy—as, for example, the transportation of the product of a factory which violates the provisions of the child-labor bill—it shall have the right absolutely to prohibit commercial intercourse between the States upon the interdicted article.

In his recent advocacy of "interstate license," Mr. BRYAN has said that a Federal statute of a few lines would provide for an interstate license, and forbid an interstate corporation to do business outside the State of its origin, unless it secured such a license. A few more lines would set forth the conditions upon which the license may be secured, conditions which would make a private monopoly impossible. Mr. BRYAN proceeds to argue that if Congress can withdraw from a lottery company the right to use the mail or the express lines for the carrying of a lottery ticket, it can withdraw from a would-be monopoly the right to employ the railroads or mails or the telegraph lines to add to its conspiracy against the people. Mr. RAYNER replies that if any one would take the trouble to study the lottery decision referred to by Mr. BRYAN, he would see at a glance that it does not at all cover the proposition that Mr. BRYAN is contending for, the proposition, namely, that every corporation transacting interstate commerce, chartered by a State, is to be visited with forfeiture unless the corporation procures a Federal license, which license may define the total volume of products that a licensed corporation will be allowed to control. According to the amazing doctrine put forward by Mr. BRYAN, the Federal government is at liberty to determine what quantity of goods a given corporation shall have the right to make and sell, and if the quantity thus arbitrarily fixed be exceeded, the corporation's franchise shall be forfeited and its business virtually destroyed. It is scarcely credible that the author of such a theory should have been described by Senator REYNOLDS as a "CALICO" "State-rights man." It is Mr. RAYNER'S deliberate judgment, on the other hand, that if Mr. BRYAN'S doctrine should be embodied in the next Democratic platform, it would be necessary to change the name of the party and confer upon it the appellation "Federalist," after which the Democratic leaders should in solemn procession accompany the remains of Democracy to their last resting place. Nor should they omit to take such measures as would make known to posterity that, in the hour of Democracy's brightest hopes and most alluring prospects, she determined to "end her great historic career, threw herself upon the poisoned weapon of Federal centralization, and died of a self-inflicted wound."

On Writing Biography

A TALENT for writing biography is a rare and an august one. It betokens many virtues on the part of the writer, a power of projecting interest beyond oneself, personal modesty, reverence, insight. The very best biographies have unquestionably been autobiographies. Every man takes his own history seriously to heart, and if he be great enough to attain simplicity and sincerity, his record is bound to be of value. The resolute unwilling of any soul, even a MADE BARBERISCHOFF'S, has its scientific value and interest as truth. The success or failure of a biographer must depend on his power of penetration, his insight into what is significant and representative in a life, and his will to suppress himself, to write about his subject's life and not his own judgments. To write a biography truly successful, there should be some sort of temperamental affinity between the writer and the subject.

Mr. CHESTERSON'S *Life of Robert Browning* was a very arduous

ing, bright, paradoxical and clever bit of writing; but who fancied that ROMNEY BROWNSON'S life, in itself, was amusing, bright, paradoxical, and clever? Mr. CHURCHMAN'S life failed in that he presented himself to those looking for another, and a greater than he. SYDNEY COLVIN, a few years past, did a small life of LAWSON, which was a little masterpiece in its kind, and Mr. A. C. BROWN is past master of the craft. All his books, not definitely literary criticism, are history. *The Wreath of Erikar Hemul-tue*, *The House of Quirt*, and *The Thread of Gold* all present us with well-defined, if unknown, personalities. *The Life of Peter and The Life of Edward Fitzgerald* are as nearly perfect bits of biography as one could wish to see. Mr. BROWN is ransomed with exquisite perceptions, wide sympathies, and human reverence; and both these subjects, men of reflective rather than active gifts, men of subtle, delicate, and austere tastes, were specially congenial themes to him. Himself a scholar, an eclectic, an essayist given to far distinctions and slow reflection, none could have been so sure more fit to deal with those two kindred spirits, both of whom had resumed the cheap prizes and glaring crowns of easy and popular successes.

As a rule, the scholarly intelligence is not best suited to dealing with great primal forces and original genius, nor is the journalistic habit of mind most likely to deal wisely with grave poetry and autobiography. Perhaps all truly great men owe the world an autobiography.

Education and Self-control

The moral responsibility resting upon the educated man is always bound to be greater, by the mass of humankind, than upon the uneducated. His training is supposed to fit him peculiarly to assume civic burden, because of well-balanced judgment, and a perfect understanding of the results consequent upon his inability to carry out public services with signal devotion. To steel moralists there is no distinction between education of the mind and education of character; the two ideas seem synonymous. Yet, in the last analysis, was there ever, could there possibly be, a grosser fallacy? Education is self-control, or education in character—for character is essentially the result of self-control—is by no means dependent upon a primary integral efficiency of either the receptive or reasoning processes. It is concerned wholly and entirely with will, and will may be associated with the best degree of ignorance or of stupidity. A man's education or lack of education is not always responsible for his acts. Stronger than any uplift derived from a leading out of the mind are actual individual proclivities and the degree to which they are indulged. Curiously enough, the duty of self-control is one of the last things learned by the college student; and by many who graduate in good standing it is never learned at all.

The primary impulse to self-control comes most often from early childhood environment, especially when this environment is that of wholesome religious influence as exerted by parents. The kind of society that is merely a hollow sphere of goodness, and the perversion of note which peaks out indifference or laziness at its centre, can seldom or never be productive of good on the growing mind of the child, whose psychological insight into the deeper significance of the lives of his riders is scarcely paralleled by any perfection in the art of mental science to which his subsequent life as a student may lead him. Education in self-control, then, must be primarily a congenital affair, interested and perfected in the life of the adult by his recognition of the wise policy of restraint as affecting his best interests. There can be nothing morbid, nothing emotional, nothing intellectual about it. Moreover, self-control may be manifestly limited to a restraint over a single tendency to excess, or it may be normal and complete over all wayward tendencies save one, and that one be deep-seated and seemingly irresistible.

There is no denying that in these days of feverish anxiety for riches, the temptations held up before the mass of influence in business are especially strong, and many of them are ethically wrong in the beginning, but become so ere the unwariness has had a chance to sleep and consider. We may rely on the constancy (or inconsistency, if you please) of human nature, so that, in the long run, the result to the State or nation is scarcely likely to be a permanently damaging one. The outlook for business integrity and popular honesty is, we believe, quite as good as it ever was; and duplicity and dishonesty are not proportionately greater than they have always been in the history of the world as we know it.

Personal and Pertinent

THE recent death of DENIS KEARNEY recalls an incident in his cratered career, and also enables his old friends to remind themselves of Dr. Joyce, an Irish maker of pleasing verse, the author of "Deirdre" and "Hiland." KEARNEY made his Eastern tour in

1878, and more than once he incurred himself against the Chinese and the then laws of the country in Boston. He encountered much cynicism there if he formulated it so, but Boston turned out to hear him, no New York would turn out to look at a physical freak. There is that difference between the towns, for New York cannot spare the time to gratify its curiosity, if it has any, about a speechmaker whose shorted performance is no longer long. One day Dr. Joyce heard KEARNEY utter his sentiments, and as he walked away across the Common he turned into verse the purport of the speech of the "Stand Lons" center, and the verses, as nearly as we can recall them, after nearly twenty-nine years, were as follows:

"Bad luck to the law that restrains,
And the slimy assassins that plunder us;
We'll never cease to kick against their chains
Till hell freezes over and under us;
Bad luck to the church and the school;
To the priest and to all pious teachers;
To religion and order and rule,
And to everything decent besides."

Perhaps the moral is applicable now.

HARPER & BROTHERS lost a very old friend in CHARLES HAYNES HARWELL, who died in New York on May 12. The HARPERS have been publishers for him since 1844, longer ago than any one connected with the house can remember. His *Engineer's Pocket Book* (better known in real life as the *Harwell*) is now in its seventy-third edition, and had just been revised once more by its author.

Mr. HARWELL came often to see his publishers. "You want to be careful about this," he would say, "you know when you had the fire—" "What fire, Mr. HARWELL?" "Oh, that fire you had several years ago." It was in 1853 that the fire happened, but Mr. HARWELL was forty-four years old at the time, and to him it was a pretty recent fire, and had been troublesome. To have a mass of that sort about, cheerful in spirit, and active in the business of life, helps to make everybody feel young.

Mr. HARWELL was born on May 22, 1809, and very nearly reached his ninety-eighth birthday. As he had good health and kept himself busy up to the very end of his days, his life's work is extraordinary to contemplate. He commenced engineering in 1829. He was United States Naval Engineer from 1836 to 1851, and did work of remarkable originality and of great value to the government. Since 1851 he had practised engineering in New York. From 1854 to 1862 he acted as supervisor of steam-vessels for the underwriters of New York, and at the time of his death he was consulting engineer for the Board of Apportionment, and in charge of extensive work at Ellis Island.

Besides his *Engineer's Pocket Book*, he was the author of *Old New York* (HARPERS), a book of reminiscences of New York between 1810 and 1860. He is credited with saying that "a day of life in New York in 1830 was worth a week of it now," which was probably true, for the New York of 1830, when the Battery was still the resort of fashion and the Astor House was a building, and there was no transit problem, must have been one of the handiest and most delightful little cities in the world.

The other day, at the peace conference, Mr. STEAR brought up what seemed to be good news, as far as it went. He said that VON BISMARCK and KING EDWARD and a large number of other rulers of ancient kingdoms lost of comparatively new republics were in favor of peace. How far this was news at all, and how far it goes, may be judged from a conversation between the Emperor NAPOLEON and Prince HORTENLOUPE at the railway station in Munich in 1867. It was as if the French Emperor was passing hastily through from a visit of condolence to Austria, which had just been whipped by Prussia, to meet his own whipping at the hands of the same power. As Europe was thus rushing from war to war, one of the active principals in the serious bloodletting of his time said to another of the bloodletters that he "hoped peace would be preserved; mankind required peace [did he roll up his eyes?]." Then he gave an intimation. This was it: "The idea that the expansion and strengthening of one country is a menace to a neighboring state *est point de vue*. Certainly much depended on Prussia. Public opinion was easily exasperated in France, and the question was whether Prussia wished to expand still further the North German Confederation." There it is: "The world requires peace, but it is to have it my neighbor must not insist on growing too big." It will be recalled, too, that Mr. STEAR and, in a measure, Mr. JAMES RUSSELL had something to say about the evil influence of the press in stirring up strife and thus encouraging nations to fight with one another. This, too, is apparently an old complaint. The press was also talked about in this same conversation. The Emperor and the Prince did not call the newspapers "yellow," but they remarked that they were uninvited in endeavoring to put an end to war, said the Emperor, "the press must also be taken into account." To this Prince HORTENLOUPE replied, "the press is still very far from being civilized." And the Emperor responded in a way that would make even the *Texas* exhibit indignation—"Yes," said he, "with us, also, the press is not very civilized."

Correspondence

TAXATION OF PRIVILEGE

MANCHESTER FREE PRESS, ENGLAND.

30 CHANCERY STREET, LONDON, May 4, 1907.

To the Editor of *Harper's Weekly*:

SIR,—I have just read your column of the 4th, upon the new budget of the British Chancellor of the Exchequer, Mr. Asquith, noting especially the distinction which he proposes shall be made between "earned incomes and unearned incomes," and am tempted thereby to ask your permission to present a brief plea for an enlargement of this essential "distinction" which is possible to the "chancellor" of every state or local exchequer, at home as well as abroad, in his plan for the taxation of current incomes or accumulated fortunes. A basis of this argument is found in the proposed Presidential and Congressional plan of limiting fortunes and raising revenue by inheritance and income taxes, which, it is suggested, may be greatly improved by two simple modifications, viz.: (1) Let fortunes be taxed chiefly in the process of their accumulation, rather than at probate, and (2) let the income tax be limited to those incomes which are not only unearned, but which are non-unearned. Your consideration is invited to a few of the arguments upon these points.

It is substantially correct to say that wealth, as fast as produced, is divided into two parts; one part goes to wages of hand and brain, the other part goes to profits. The greater the part that goes to wages the smaller the part that goes to privilege and vice versa. The prime agency in determining how large shall be the part that goes to privilege is the private appropriation of ground rent, economic rent, in its various forms. The essence of privilege is the law given to one man in profit at another man's expense. A man gets rich, not out of his earnings, but out of his savings. If obliged to spend all his earnings it is not possible for him to accumulate riches. The poor man rebels, not because his rich neighbor can accumulate five hundred dollars to his one, but because, through the operation of this special privilege, it is at his, the poor man's, expense that the rich man's accumulation is made. Ex-Governor Long says that there will be discontent just as long as certain comforts and possessions are within the reach of one class and beyond the reach of another class. This discontent Archbishop O'Connell calls "The Tumbler of the Exchequer" that unprivileged men, whether unprivileged rich or unprivileged poor, have not far to look to find that discontent and envy start only where skill and enterprise leave off and special privilege begins. You are not enemies of Edison, nor Marconi, nor Roosevelt, nor railroad magnates, nor capitalists of industry; you gladly accord them princely rewards as public benefactors. It is only when the people are rallied upon to provide an Edison fortune for every city and town in the country through privileged exaction that your discontent is aroused. It is only when they are required to contribute upon an unprivileged scale fortune of three or four hundred million a privileged fortune of a thousand million, based upon economic rent, that the shoe begins to pinch. It is only when the ore baron, the coal baron, the oil baron, the railroad baron, and the land baron are privileged to get one hundred or a hundred dollars from their wages and add it to the monopoly price of coal and iron and air that men are swayed by the "tumbler of the exchequer."

Legislation has been law constituting criminal offenses. The air is charged with criminal prosecution and conviction where fortunes have been seized through violation of law. But it is not true that neither legislatures nor courts have seriously addressed themselves to stopping the continuous drain of wealth from the pockets of the producers into the coffers of the privileged? President Roosevelt in his last message rejoins upon Congress: "Let us not do what the next generation cannot undo. We have a right to the proper use of both the forests and the fuel during our lifetime, but we should not dispose of the birthright of our children." Mr. Bryan, in his production of a first Moral Awakening, quotes the declaration of the United States Supreme Court that "an unjust tax is hereby in form of law." Unjust fortunes are, we say, the fruit of unjust taxes, taxes which abstract from wages and make almost impossible the savings of labor while augmenting the fortunes of privilege; or, to be more exact, unjust fortunes are due to the absence of just taxes.

But, it is asked, what are you going to do about it? We say, there is just one punishment to fit the crime, to wit: the taxation of privileges. Tax the oil and the coal, the franchise, and all other forms of economic rent, at its fixed initial source, the land, which, without inequitable or despotic process, bears always the impact of its own market valuation. Tax not private ownership nor corporate franchise, but tax the privilege attached thereto. The colossal error of the century is the private appropriation, instead of the taxation, of rent. This it is that makes the shopping district of Boston a continuous battle field for the business interests of her people, and every battle a Waterloo.

For the prevention of unjust fortunes a national process is already provided. For an equitable reduction of accumulated fortunes artificial machinery remains to be invented. President Roosevelt in his message confesses that the question of an income tax is "very intricate, delicate, and troublesome." It would seem that the proposed disposition of fortunes by means of an inheritance Tax must prove awkward and of questionable justice, besides discouraging enterprise at its point of greatest efficiency, and in the midst of a beneficent career. It would discourage the accumulation of unprivileged fortunes, which are a blessing in proportion to their size.

It is a fundamental principle of economics that the expenditure,

enterprise, and activity of society express themselves in economic cost, the value of land. A tax upon rent subtracts nothing from wages, and however large that tax may be it cannot remain a burden upon the owner beyond a generation at most. Land value, otherwise perishable, is made imperishable by public conservation. Hence the idea that the whole tax, whether inheritance or income, be gradually transferred to this one base. Whether it shall be imposed lightly, as a life rate, or heavily, as a death rate, is merely a question of method. In either case it will soon cease to be a burden upon any one.

Unjust fortunes are made out of ground rent accumulated and compounded. They can be perpetuated only by the private appropriation of ground rent; cut off from ground rent, the public patrimony, they will quickly crumble and perish from the face of the earth.

Mr. Carnegie says: "Who made the 'wealth' of the Manhattan Island farm? The community, the population, the people. Then you tell me that wealth is sacred. I say that the community was the leading partner that made that wealth. It was hundreds of people settling up there, thousands of people settling around there, and here are these millionaires. They have toiled not, neither have they spun." Is it not sensible to make such cumulative fortunes as these the basis of life taxation?

Congressman Perkins, supporting his own tax measure, says of the man who gets rich of a Manhattan farm: "The State has been an essential partner in his success. . . . The State has the inherent right to levy upon it such a tax as may fairly represent what the people may have contributed toward the fortune." This is single tax pure and unadulterated.

President Roosevelt cannot eliminate "intrigue, delinquency, and troublesome" from his income tax until he learns to distinguish sharply between capital and privilege, between fortunes that are earned and those that are unearned.

Mayor Fitzgerald ran never provide for the greater needs of a greater Boston so long as he continues to ignore the forty million dollars of unearned and untaxed annual income in the City of Boston.

I am, sir,

C. B. PHILLIPSON,

FITCH, MASS. Single Tax League.

LINCOLN, ROOSEVELT, AND THE NEGRO

DUNSTON, CALIF., April 25, 1907.

To the Editor of *Harper's Weekly*:

SIR,—In contrast to the stand taken by President Roosevelt on the question of the appointment of negroes as postmasters and custom house collectors in the Southern States, note the following extracts from the words of Abraham Lincoln:

In one of his debates with Judge Douglas he says, as speaking of what he would do if he had unlimited power, "What next? Free them, and make them politically and socially our equals! My own feelings will not admit of this; and if mine would, we will know that those of the great mass of white people will not. Whether this feeling accords with justice and sound judgment is not the sole question. If indeed it is any part of it. A universal feeling, whether well or ill founded, cannot be safely disregarded. We cannot make them equals."

And again in 1860, after his election as President, but prior to his inauguration, Lincoln wrote to John A. Gilmer the following words:

"As to the use of patronage in the slave States, where there are few or no Republicans, I do not expect to inquire for the politics of the appointee, or whether he does or does not own slaves. I intend in that matter to accommodate the people in the several localities, if they themselves will allow me to accommodate them. In one word, I never have been, am not now, and probably never shall be in a mood of harassing people either North or South."

But perhaps it is the ambition of Theodore Roosevelt to go down to history as a greater friend to the negro than was Abraham Lincoln.

I am, sir,

A. H. DUNSTON.

It is very nearly half a century since Lincoln made the speech you quote from. A good deal has happened since then. Lincoln took the negro as he found him. A contemporary President must do the same. President Roosevelt has appointed very few negroes to office, and might with profit have omitted some of the negro appointments he has made. He has no more notion of social equality for negroes than Lincoln had.—KERRIN.

"MOLLYCODDLE"

ESSEX, PA., May 1, 1907.

To the Editor of *Harper's Weekly*:

SIR,—You use the word *Mollycoddle*. Will you kindly give meaning of word and its derivation.

I am, sir,

PAUL A. BENSON.

Derivation from *Moll* or *Molly*, and *coddle*. The *Century Dictionary* defines it as "one who lacks energy or resolution; an effeminate man." The word is familiar. Thackeray used it, and so did the President in a Harvard speech last February. The President is accused of regarding as mollycoddles all persons who decline in conviction as to the indisposability of intercollegiate football to successful education, but it may be that detractors have exaggerated his views.—KERRIN.

THE MURDER CHARGE AT A LABOR UNION'S DOOR

BY THE CONFESSION OF ONE OF ITS MEMBERS, THE WESTERN FEDERATION OF MINERS IS CHARGED WITH HAVING INSTIGATED TWENTY-SEVEN MURDERS, INCLUDING THE ASSASSINATION, IN 1905, OF FORMER GOVERNOR STEUNENBERG, OF IDAHO. FOR COMPLICITY IN THIS CRIME, W. D. HAYWOOD, OF THE FEDERATION'S "INNER CIRCLE," IS ON TRIAL FOR HIS LIFE

An attempt to learn the truth about the most serious charge that ever has been laid at the doors of organized labor is now being made at Boise City, Idaho. William D. Haywood, secretary-treasurer of the Western Federation of Miners, is on trial in the District Court, charged with the murder of Frank Steunenberg, former Governor of Idaho. Two other officers of the Federation are jointly accused, but they will be tried separately. One remarkable fact which provokes arguments for and against the organization is that the evidence upon which Haywood and his associates have been indicted is based upon the confession of a member of the Federation who is reported since to have lost his reason.

The three men charged with conspiracy and murder are Haywood, Charles H. Meyer, President of the Western Federation of Miners, and U. A. Pettibone, formerly a member of the supreme governing body of the organization. These three are men of unusual intelligence and high executive ability.

The principal accuser of the defendants is Harry Orchard, who has declared in a story of great detail that he committed this and twenty-six other murders under the direction of three men. Stephen Adams made a confession largely corroborating Orchard, but he has since repudiated it, saying that he told the story because he was afraid of being made a scapegoat. Another member of the Federation supposed to have been one of the so-called "inner circle" which directed the murderous plans, is L. J. Simpkins, who has been indicted, but is a fugitive.

According to Orchard's confession it was he who assassinated Steunenberg, besides committing twenty-six other murders by shooting, dynamiting, train-wrecking, etc., under direction of the defendants, but at times when Haywood, Meyer, and Pettibone were actually in another State. The prosecution has presented a list of fifty-one witnesses by whom it expects to prove the truth of Orchard's assertions.

Haywood and his associates declare that they welcome this trial because it will give them the opportunity to prove their innocence beyond doubt. The issue will be contested to the utmost limits of the law. The case against Haywood is admittedly the strongest that the prosecution has. Should this fall, it is likely that the proceedings against Meyer and Pettibone will be dropped. The State is represented by an array of eminent counsel. So is the defendant Haywood, and a great defense fund has been raised among labor organizations throughout the United States. It is known to run well up into the hundreds of thousands of dollars, and some estimates place it as high as \$1,000,000.

The facts directly

connected with the arrest of the three chiefs of the Federation are these: Frank Steunenberg, former Governor of Idaho, had been followed and watched for months by Harry Orchard, who sought to assassinate him. Twice Orchard tried to shoot his victim, but failed. One of these times was arranged, with diabolical ingenuity, for Christmas Eve, but as he was walking home that night with his son and his brother the plan miscarried. Then Orchard planted a bomb under the back gate of his victim's home. At six o'clock on the evening of December 30, 1905, Steunenberg started for home. Orchard, who had been on watch for hours, stealthily hurried ahead of him by another route. Waiting for the moment, the assassin saw the object of his vengeance approach. Even in the gloomy dusk there could be no mistaking that gigantic figure.

Orchard hurried along. At the Steunenberg gate he dropped an open newspaper. Stooping to pick it up, he quickly fastened to the gate the wire which led underground to a bottle of sulphuric acid inside the bomb. Orchard walked briskly away to a safe distance and turned to watch. Steunenberg pushed open the gate, the tap of the wire broke the bottle of sulphuric acid and set off the bomb. The explosion killed Steunenberg, tore him in pieces, James McFarland, an old detective who first gained fame by patient and fearless investigation which led to the hanging of eleven leaders of the Molly Maguires, a secret organization that murdered by wholesale and spread terror through the coal regions of Pennsylvania, was called out to Idaho and put to work on the case. He found the same plan he had used in the Molly Maguire cases thirty years ago—went to work as a miner and burned off the inner circle in the Western Federation of Miners. When the three came to stand trial, Orchard arrested, kept in solitary confinement with plenty of food and good cigars, but with nothing to read and no one to talk with him.

After a few days of this treatment Orchard began to show signs of breaking down. McFarland would not open his emotions by talking about his old mother at home in Pennsylvania, his early religious training, or the certainty of judgment day and future punishment, and urged him to repent of his sin. Orchard broke down and confessed. McFarland spent three days writing down his utterances. To read them requires seven hours. The confession is one of the most amazing documents in the history of crime. Neither the chronicles of the Medievals and Morgans nor the imaginations of Poe and Stevenson can furnish any parallel to this tale of slaughter planned with devilish ingenuity and wrought with earned brutality.

Such a confession as this will evidence usefulness as evidence un-

IS COLORADO IN AMERICA?

THESE are absolute facts and are not the only wrongs that have been perpetrated in Colorado in the name of law and order. It has been charged and never successfully denied that the corporations controlled \$15,000,000 towards the charges of the general Republican administration, but Governor Peabody has been unable to DELIVER THE GOODS.

THESE wrongs have not even been lawfully established, and before the courts in Colorado we would not have demonstrated the right to regulate our natural wealth. The right here as in all states is now being threatened through the action of the courts and will be established.

If we desire to save the mining industry and the livelihood of the Western Federation of Miners of Colorado it is our duty to demand and protect freedom, and demand it. We do demand. See Times at Mining Exchange, Denver, Colorado.

less corroborated by the testimony of unimpeached witnesses carrying to the minds of the jury conviction beyond a reasonable doubt. This corroboration the State promises it will furnish. The defense declares that corroboration is impossible, that Orchard is not only a trapped and self-accused murderer, but a person of unclouded mind who has tried to purchase his wretched life by dragging in accusations against innocent officials of a hated organization.

But before going into the details of the confession it is necessary to go back to the history of the Cœur d'Alene mining troubles in the late nineties. The miners went on strike, and non-union miners were brought in to take their places. A trainload of men, said to be strikers, dynamited the \$300,000 mill of the Blunk Hill and Sullivan mine at Wardner. Rioting, arson, and bloodshed followed. The militia of Idaho went off to the Spanish war. With improvised militia and regular troops of the United States army, chiefly negroes, Steunenberg, then Governor of Idaho, arrested the union labor leaders and eight hundred of their followers and confined them within barred wire stockades in the famous "hell pen" of the Cœur d'Alene. There were many charges that the troops outrageously abused the prisoners. Steunenberg, a plain, decent citizen, farmer and banker, who went into office as a friend of labor, retired at the end of his second term as governor an object of the execration of thousands of miners.

There were other hated men. After the Cœur d'Alene trouble came the famous Cripple Creek and Telluride strikes in Colorado, with accompaniments of assault, arson, dynamiting, and murder. Hundreds of the striking miners were deported by the troops. The struggle cost many lives and millions of dollars, and the strikers were defeated. Governor James H. Peabody, of Colorado; D. H. Moffat, a millionaire miner; and Justices Gilbert and Tiedhard of the Supreme Court, were sentenced to death, according to Orchard's

The Gateway at which Governor Steunenberg was blown to pieces

admitted it. Neville, fearing arrest, fled to Nevada. Orchard heard he might tell. A man named Napp was hired to poison Neville for \$10,000. Neville died.

Superintendent McCormick and Foreman Black, of the Vindicator Mine, were blown to pieces one night by a bomb on the sixth level. Orchard swore that he put the bomb there under orders, but by error missed putting it on the seventh level, where it would have killed fifteen or twenty non-union miners.

As an instance of the anger aroused among the Western Federation of Miners by Governor Steunenberg's action in dealing with the Cœur d'Alene troubles, the inflammatory poster reproduced on page 762 of this article was circulated throughout the Western mining region. Below the flag appeared these statements:

"These are absolute facts and are not the only outrages that have been perpetrated in Colorado in the name of law and order. It has been charged and never successfully denied that the corporations contributed \$15,000 towards the election of the present Republican administration, but Governor Peabody has been unable to deliver the goods."

"The unions have not been nor can they be abolished, and before the strikes in Colorado are settled, we will have demonstrated the

story. Many men of low note were also to be destroyed."

Orchard admitted that he killed the nineteen non-union miners who were blown to death as they stood on the railroad platform at Independence, Colorado. He swore that the plot was perfected by Haywood's rooms in Denver. To establish an alibi, Orchard left Independence the day before the killing in the company of a man named Neville.

Orchard made a pretense to climb back to Independence, and there he pulled the string that set off one hundred pounds of dynamite under the platform on which the victims were standing. Next day Neville received Orchard of the crime, and he admitted it. Neville, fearing arrest, fled to Nevada. Orchard heard he might tell. A man named Napp was hired to poison Neville for \$10,000. Neville died.

Superintendent McCormick and Foreman Black, of the Vindicator Mine, were blown to pieces one night by a bomb on the sixth level. Ser'y-Treas."

Merritt Wailey was murdered in Denver with a bomb intended for Chief-Justice Gilbert. Arthur W. Collins, manager of the Newburger Union Mine at Telluride, was shot in the back, through the window of his home. J. W. Barney, a shift boss; John Mahoney, a non-union miner at Telluride; and Martin Gikason, a mine manager at Cripple Creek, who dared to advocate non-union labor—all were assassinated. A mining engineer named Bradley was murdered while in San Francisco on his honeymoon. Orchard swears that this was all his work, under orders from Meyer and Haywood.

Three attempts were made to kill Governor Peabody, of Colorado. Once, Orchard says, he and Simpson planted a bomb for him in the street. It was to be touched off by a wire as Mr. Peabody passed the spot. A coal wagon backed on the wire just as Peabody came along and put it out of working order. Another time it was planned to shoot him in front of his home at night as he alighted from his carriage. As it happened, only the women of his family were in the carriage, and the Governor escaped. Another time it was planned to decoy him home from a meeting in an automobile and kill him on the way. A non mysteriously warned him one afternoon of this danger, and again he was saved.

Another assassination that failed, as has been indicated, was that planned for Chief-Justice Gilbert. He with Justice Goddard had attended the striking miners by decisions and strictures on the order. He usually crossed a vacant lot on his way to the court chambers. A bomb was planted and a satchel purse, with wires attached, was put on the ground. It was supposed that the chief justice would pick up the satchel and set off the bomb. Judge Gilbert saw a friend near by that morning and joined him instead of crossing the vacant lot. It was the first time in months that he had deviated from his custom. Another man came along, picked up the satchel, and was blown to bits. The explosives in the bomb were so arranged that when the satchel was picked up sulphuric acid would be spilled on them and set them off. Orchard says he set the bomb by orders.

Justice Goddard escaped assassination through the slip of a pin. No one knew anything about it until Orchard confessed. He said a screw-eye would be found in Justice Goddard's gate. Near by, he said, was a bomb. A wire was attached from the screw-eye to a bottle containing sulphuric acid. When the gate was opened the string was to pull the cork of the bottle and spill it over his giant cap. The bottle was planted five days before the time came to arrange the wire. The acid had eaten the pin, so that when Justice Goddard passed through his gate the pin and not the cork came out.

When Justice Goddard was informed of Orchard's confession he examined his gate and found the screw-eye. Then Adjutant-General Bulky Wells, of Colorado, scratched the earth until he found the wire and pin attached to the cork. Then he scraped the

A NEW LOCOMOTIVE THAT "WALKS" A WIRE

TO conceive of a locomotive that balances itself on a single rail as perfectly as a skater balances himself on a single skate, seems too great a task to require of the imagination. When one adds that this locomotive dips at the rate of 120 miles an hour, whether the road-bed be rough or smooth, climbs hills with ease and dashes safely around curves much sharper than those on ordinary railroads, the learner of such a recital of facts is apt to think that a Alucibanon is at large. To say that this locomotive needs no bridge, but runs lightly across ravines or rivers on a single line of wire cable, appears to add the crowning touch of incredulity.

Yet such a locomotive has been invented and has actually done these things. Its balance is maintained by the application of the principle that keeps a spinning top upright. In each engine there is a gyroscope apparatus, weighing only one-twentieth of the total load, which revolves constantly at a high rate of speed and thereby keeps the engine erect, no matter how sharp the curve nor how rough the road-bed.

The monorail locomotive, which seems sure to work a revolution in transportation, had its first public exhibition a short while ago in London, when the inventor, Louis Brennan, C. B., gave a practical demonstration of its ability before the Royal Society.

It may be fairly said that nothing was ever presented to the Society, which usually receives the first announcement of scientific discoveries in Great Britain, which aroused so much enthusiasm as the exhibition of the monorail engine. The demonstration of this great triumph of science, says the *Observer*, which was the only New York newspaper to publish the remarkable news, was made before a brilliant assembly gathered under the auspices of the Royal Society.

For more than two hours the leaders of the English scientific world listened to the exposition of a well-known principle of mechanics for the first time practically applied and watched a marvellous demonstration which seemed to set the laws of gravitation at defiance. At the close they acclaimed its discoverer or inventor as worthy to rank high upon the roll of honor which bears the names of Newton and Watt and Stephenson.

What they saw was this: A miniature railway-car or locomotive, standing entirely above a single rail with apparently nothing to balance it, ran about the hall, turned sharp corners at high

speed, crossed a single strand of wire cable in lieu of a bridge and climbed heavy inclines—all with perfect stability. It was sometimes loaded, sometimes empty. There was no attempt to balance the load; the vehicle itself did that instantly and automatically. Every attempt to maintain it resulted in a paradox. If the load were piled all upon one side it seemed inevitable that the vehicle would sag, if indeed it did not topple over. But no, the overloaded side automatically rose in proportion to the burden and the empty side was depressed. To the uninitiated the thing was uncanny, so Alice in Wonderland reality.

The creator of this new system of locomotion is Louis Brennan, C. B., the well-known inventor of the Hrennan torpedo. This invention, by the way, which is controlled by the British War Department, is the only device which has been successfully kept a government secret for any length of time. He told his audience very briefly to-night something about his long search for an ideal method of traction. He began studying the problem in Australia nearly thirty years ago. How to reduce friction was the chief task. It is well known that only about twelve per cent. of the power generated by a locomotive is actually used in drawing a train. The friction to be overcome is partly in the machinery and partly in the oscillation of the vehicles and the grinding of the wheels against the rails on either side. The most perfect road-bed and rails with an ordinary track will not reduce this beyond a certain point.

Mr. Brennan speedily realized, as every railway man and mechanic has done, that the ideal condition would be a train perfectly balanced upon a single rail. Given that, the possibilities of great speed with economy of power would be increased many fold. Until to-night's demonstration was made, the practical attainment of that ideal would have seemed outside the range of scientific attainment to even the eminent men who were included in the Royal Society's audience. Very early in his investigations Mr. Brennan began experimenting with the gyroscope—in other words, he began to study the ordinary spinning top with which every schoolboy is familiar. The principle of the spinning top is the secret of the seeming miracle which he showed.

The inventor's own description of the result of his labors is simple enough to any one's comprehension. He said:

"The characteristic feature of this system of transport is that

The Brennan Gyroscopic Locomotive maintaining its balance on a Wire which serves as a Bridge

THE MONORAIL PRINCIPLE OF THE DEVICE IN THE NAME AND THAT WHICH KEEPS A SPINNING TOP UPRIGHT. THE EXHIBITION OF THE LOCOMOTIVE BEFORE THE ROYAL SOCIETY IN LONDON MADE A SENSATION. IN THE PHOTOGRAPH MR. BRENNAN STANDS NEAR HIS MACHINE

The "Spinning-Top" Locomotive running on its Single Rail regardless of Grades and Curves

MR. BRENNAN IS CONFIDENT OF APPLYING HIS INVENTION TO PASSENGER TRAFFIC. HE PROPRIETES A HOTEL ON WHEELS, WITH ROOMS TWENTY FEET WIDE, WHICH WILL TRANSPORT PASSENGERS IN COMFORT AND SAFETY AT 150 MILES AN HOUR

each vehicle is capable of maintaining its balance upon an ordinary rail laid upon sleepers on the ground, whether it is standing still or moving in either direction at any rate of speed, notwithstanding that the centre of gravity is several feet above the rail and that wind pressure, shifting of load, centrifugal action or any combination of these forces may tend to upset it.

"Automatic stability mechanism of extreme simplicity carried by the vehicle itself radiates it with this power. The mechanism consists essentially of two flywheels rotated directly by electric motors in opposite directions at a very high velocity and mounted so that their gyrostatic action and stored-up energy can be utilized. These fly wheels are mounted on high-class bearings and are placed in evacuated cases, so that both air and journal friction is reduced to a minimum, and consequently the power required to keep them in rapid motion is very small.

"The storing energy in the fly-wheels, when resulting at full speed, is an great and the friction so small that if the driving current is cut off altogether they will run at sufficient velocity to impart stability to the vehicle for several hours, while it will take from two to three days before they come to rest. The stability mechanism occupies but little space and is conveniently placed in the cab at one end of the vehicle. Its weight is also small, about five per cent. of the total load being considered an ample allowance for the first vehicle.

"The road wheels are placed in a single row beneath the centre of the vehicles, instead of in two rows near the sides, as usual, and are carried on bogies or compound bogies which are not only pivoted to provide for horizontal curves on the track, but for vertical ones also. By this means the vehicles can run upon curves of even less radius than the length of the vehicle itself, or on crooked rails or rails laid over uneven ground, without danger of derailment.

"The motive power may be either steam, petrol, oil, gas or electricity, as considered most suitable for local conditions. In the first instance, however, it has been decided to use a petrol electric generating set, carried by the vehicle itself, for the supply of current to the road wheel motors and to the stability mechanism. Such a vehicle will have the great advantage of being always ready for immediate use, the gyro wheels being kept constantly running by current from a small accumulator while the engine is at rest. In order that the vehicle may be able to ascend steep inclines the wheels are all power-driven and change gears are provided for use in hilly country. It is also possible to run free wheel down-hill at a great velocity, so that a good average rate of speed can be attained.

"Everything points to great economy resulting from making the vehicles wider in proportion to their length than on ordinary railways, and it has therefore been decided to make the experimental wagon twelve feet wide, or one and a half times as wide as usual.

For civil work in the colonies the vehicles will probably be two or three times as wide, if not more. Brakes capable of being operated by pneumatic or manual power are provided for all the wheels.

"The rail, which is of curved top, only requires to be the same weight as one of the rails on an ordinary line in order to carry the same load on the same number of wheels in each case. The sleepers also only require to be one-half the usual length to give the same area of support to the vehicle.

"Flying lines of railway can be laid with great rapidity over uneven ground with slight expenditure of labor. Specially designed building vehicles are also planned on the non-trail principle and equipped with electric gear for handling the rails, being kept at the rail head for the purpose. It is confidently anticipated that working in this manner it will be possible to keep up with an army on the march and supply them with all their requirements.

"Bridges are of the simplest possible construction, a single wire hawser stretched across a ravine or river being all that is necessary for temporary work. These hawsers can be built up on the spot from separate wire-rope strands, so that the transportation of them becomes a easy matter. Strange to say, the lateral straying of the hawser does not disturb the balance of the vehicles, and the strongest winds will fail to blow them off. In other cases of bridge building a single row of piles with a rail on top supports, or a single girder carrying the rail may be conveniently used.

"The expenditure of fuel is considerably smaller than on ordinary lines, owing to the absence of flange friction on curves and to the vehicles running without oscillation or jolting. The speed can be from twice to three times that of ordinary railways, owing to the smoothness of running of the vehicles and to the total absence of lateral oscillation. Vehicles provided with their own motive power can go anywhere a single rail is laid, and besides carrying a substantial load themselves are also capable, on tolerably level country, of supplying current to other vehicles unsupplied with power-generating plants, thus running as trains.

"The Indian government has now voted \$25,000 for the construction of a full-sized vehicle, and the War Department will construct the necessary rail upon government land at Chatham near the inventor's home. His experiments have thus far been conducted upon the extensive grounds of Mr. Brennan's estate.

"The present model, which is upon a scale of one eighth, has been privately examined and tested during the last few weeks by the most eminent English experts, and their reports to the government have been uniformly eulogistic of the new system of transport. Some months more, of course, elapse before the line equipped with a car of much larger dimensions than the ordinary railway carriage is in operation. Mr. Brennan's confident dream is of a transcontinental line furnished with a travelling hotel with rooms fifteen or twenty feet wide that will carry passengers in perfect comfort and safety at a speed of 120 to 150 miles an hour.

THE WATERLOO AT FORT MYER

By ARTHUR SOMERS ROCHE

DRAWINGS BY G. E. CESARE

"If I had my way," said Frank Bradley, "we'd never teach them laps or Chinese anything more in our colleges. They're wise enough now, and when you go and plant our kind of knowledge on top of their natural deviltry you're only making trouble for yourself. You take that from me. I know. Derp! Why, what do you think of one Chink putting it all over a whole troop of our cavalry? Hah!"

"Too bad that mere type and ink cannot imitate the snort that Bradley uttered. His right fist clenched itself so hard that the knuckles showed like dots of white, and his big jaws snapped so that he involuntarily bit through his cigar. Then he shook his round, bristly head and began to grin a sheepish grin.

"Never thought of it this way before," he said. "If any of us could 'a' caught that Chink first off, we'd 'a' put a few fancy dents in his yellow hide; but he did play it on us all right. You see, I never intended to go a soldierin', but one time after I'd worked myself pretty nigh to death riding herd for old man Swan, and then blew in three months' pay in one night, I got a terrible grouse on and drifted into Fort Myer, and first thing you know I'm signed up as a trooper and wearing yellow stripes down

"For my part," says he, "I can't see nothing wrong with the Chink. He treats me like a gentleman, and I'm sure that I intend to return the courtesy. It ain't every white keeper of a canteen that'll hand out credit to the nation's preservers."

"What?" we yelled. "Is that Chink giving jawbone?"

"How else would I be smoking this good scogee, and this the sixth of the month?" sarcastically asked the old reprobate.

"So we figured that we could forego the pleasure of destroying this black-and-tan until a committee should investigate this phenomenon. We all wanted to be members of it, but we finally compromised. Bill Keverney offered to lick any gent that sought to deprive him of the honor, and I could lick Bill; so we were the committee."

"Next day we went down to John Chinaman's. Keverney wanted to go light at the start, but I persuaded him that the only way to do was to make a big splash, and inspire respect by the amount of stuff we took."

"Good morning, John," says I.

"Good-mornin', General," says John.

Drawn by G. E. Cesare

"Napoleon Bonaparte and Andrew Jackson each owed about four dollars for pies and tobacco when we left"

the outside o' my legs loaded o' chaparral. And right there is where I learned what a terrible thing it is to be afflicted with thirteen dollars a month. By the time a fellow had invested in a couple of drinks, taken in a show, paid his laundry bill, and got a few things to wear, there wasn't a whole bit left for riotous dissipation. So for about twenty-five days each month we chewed our thumbs in place of good Virginia leaf, and meditated on the error of our ways.

"Credit was a dead thing in all the canteens. Nix was the word handed out to any warrior of the hue who was so foolish as to try and get 'jawbone' for a modest plug of tobacco. Kipling has it right—the soldier is a hero until it begins to hurt people's pockets.

"So when we noticed that a blooming Chink had opened a little store, we heeled it with wrath. It bore our sorrow of the fitness of things to see the yellow gent sitting among untold luxuries in the shape of juicy pies, ripe oranges and bananas, and indecent quantities of tobacco.

"We thought some of rushing his place and putting him out of business. In fact, we had gone so far as to plan the whole affair, when old Dick Parks disturbed the sequence of things by letting into the gathering and asking the ways and wherefores. To our surprise, he didn't seem at all hit by our story of the injustice in the general distribution of the good things of this earth. He pulled out a long black cigar, lit it offensively, and gazed around upon us like a king on his throne.

"That 'general' kind o' made me hate to do it, but Keverney went at him hard."

"Jawbone!" he asks.

"Sure," says John. "Plenty gentlemen mucher jawbone."

"He knew the technical terms all right. So we jawboned him for about eight dollars' worth of stuff. Then he pulled out a little book for us to sign."

"What's this?" growls Keverney, beginning to look sore.

"You jawbone. You sign book. Allee sames know who charges."

"I took Keverney aside and reasoned with him. 'Bill,' says I,

"down this Chink book any different to you from any other Chink?"

"Course not," says he.

"Then," says I, "do you think that you look any different to him from Napoleon Bonaparte?"

"No," says Bill.

"Then sign the book," says I.

"And we both signed calmly and deliberately. Napoleon Bonaparte and Andrew Jackson each owed about four dollars for pies and tobacco and such stuff when we left. We could tell by the expression on John's face that, though he looked wise, he didn't have the faintest idea what we were writing. We looked for Parks's name in the book, but there was only one entry, and that was against the name, U. Will Nevergetit. It was a queer name, but it looked a whole lot like Parks's handwriting, and we weren't experts on handwriting.

Drawn by G. E. Canine

"He blew up to the post with his queue neatly coiled under a derby hat"

"We went back with our trophies, and passed the glad truth to the boys. Next day the rush began. John was satisfied with jawbone, as he told him that pay-day came the end of the month, and that he would get his then. He came from an older civilization, and I guess officers, as he thought us to be, don't bother to cheat the poor there—they just take it away from them. He had run a laundry somewhere, and had sold it out for this more profitable business. Many a time, as I hung him up for a couple of pies or a pound of candy, he would tell me that his trade more than exceeded his fondest hopes. He was backed, too, by some 't'inks in the city, and when, at the end of a week, he sent for more supplies, they were overjoyed. They thought it was a good game of get-rich-quick."

"I tried to get our friend to do our laundry, for there is nothing like making hay while the sun shines, but John was above that sort of thing now. Besides, he was swamped with business and didn't have time."

"So things went nicely on for almost a month. It was really sinful the accounts that Napoleon and Andrew Jackson, and the Onyon ran up with him. But they weren't a patch on the jawbone extended to Daniel Lambert. Any one who saw his cake bill would understand why he is fat. And we didn't neglect the heroes of the past. From Julius Caesar to Christopher Columbus all patronized John's canton."

"Along toward the end of the month, when we had been jawboning for three weeks, the first evidence of a growing mistrust was exhibited. I had charged a box of cigarettes to Search Me, and John leaned confidentially over his counter and asked, 'You jawbone alee time?'

"I could afford to get riled, and I did. I told him good and plenty what I thought of a Chink that had lost his faith in his fellow men. I told him that pay-day was the day after to-morrow. I apologized all right, so I got a box of cigars to show that there was no hard feeling. But I tipped the boys off, and next day came the final rush. We stocked up with enough baloney and fancy grub to keep us going a week. And every one told John that the next day was pay-day."

"It was, but we didn't visit John. We thought to ourselves, and put the thought in words to each other, 'What's the use in paying this heathen? Here, for the first time, we have a chance to keep our whole month's pay. Shall we surrender it to a yellow tradesman? Far be it from us.'"

"I guess John must have felt nervous when the next day passed

without any of us calling on him, but it couldn't have been a marker to the way he felt when a week had passed and no blue coats had settled their bills."

"Then he was mad. He blew up to the post with his queue neatly coiled under a derby hat, and American trousers crowding a silk kilt jacket for the place. The sentries jeered him, and the adjutant could do nothing for him. No one seemed to know of any new recruits by the names of Bonaparte, Jackson, or Caesar, and as for U. Will Nevergetit, why, they had to give it up. But the adjutant thought that the best thing to do would be to read the names at parade, and give John a chance to identify his delators."

"John was sure of one thing. All who had charged stuff with him were from H Troop. So to H Troop the list was read by the officer of the day. We were all there, all drowsed a little, and it was impossible for that Chink to pick any one out of the crowd as it would have been for us to pick him out of a hop-joint. Name after name was read off with the amounts, but no one responded. Search Me, His Onyon, and U. Will Nevergetit owed good solid sums, but no one cracked a smile. John stood there, looking like he had malaria, and couldn't tell who had signed those names. We stood it pretty well until we learned that Napoleon owed eighty-three dollars. We didn't lose our sober faces when we discovered that Andrew Jackson had been delinquent on pie and candy about one hundred and ten dollars' worth. But when Daniel Lambert's name was read we felt our breath. He owed two hundred and five dollars and some small change."

"John looked up to heaven, he spat upon the ground, and then he blessed, 'Daniel Lambert, him one damn thief!' Then we all collapsed. The paper dropped from the captain's hand, and he was almost weeping with laughter as he turned to John, and told him that he didn't believe that he could find his parties. And John went his way, a silent picture of the effects of the East knocking up against the West."

"Next day a recruiting party reported that his carden was closed and that our graft was as sure. And we all settled down to the old humdrum culture of paying our bills as we bought our stuff. H Troop was in wrong with every one who had stuff to sell, and the other companies were sure because we hadn't let them into the good thing."

"A couple of months after John's departure, another Chink opened a little laundry. Keeney and I went down, as before, but there was nothing doing in the jawbone line. But he told us his prices, and they certainly were cheap enough. We tried him, too, and he was the best ever as an antidote to earth on the floor. One day after we had been patronizing him a couple of months, he got an assistant. I thought that he resembled John, but decided that I was mistaken, for he was a curly devil, not at all like our good-natured friend."

"In fact, business grew so good that Sing Kee announced he was going to do general cleaning, and hired a couple of extra Chinks. So we began bringing our suits and coats down to him. It was (Continued on page 781.)

CHAPTER IV

THE young men in Carson Dwight's set had an odd sort of lounging-place. It was Keith Gordon's room above his father's bank in an old building which had withstood the shot and shell of the Civil War. "The Den," as it was called by its numerous haphazard occupants, was reached from the street on the outside by a narrow flight of worn-out and rickety stairs and a perilous little balcony or passage that clung to the brick wall twenty feet from the ground along the full length of the building. It was here, in one of the four beds, that Keith slept when there was room for him. After a big dance or a match game of baseball, when there were impetuous visitors from neighboring towns left over for various and sundry reasons, Keith had to seek the uncomfortable solitude of his father's home or go to the hotel.

Hill Garner, brainy as he was, while he was always welcome at his father's house a mile from town, seemed to love the company of this noisy set. Through the day it was said of him that he could read and saturate himself with more law than any man in the State, but at night his recreation was a cheap cigar, his old bulging carpet slippers, a cozy chair in Keith's room, and—who would think it!—the most thrilling Indian dime novel on the market. He could quote the French, German, Italian, and Spanish classics by the page in a strange, musical accent he had acquired without the aid of a master, or any sort of intercourse with foreigners. Yet he knew and loved all things pertaining to great art. His bellfellow was Bob Smith, the genial, dapper clerk at the Johnson House. If Bob had any quality that disturbed the surface of his uniform equanimity, it was his pride in Carson Dwight's friendship. He interlarded his talk always with what Carson had said or done, and Carson's candor for the Legislature had become his paramount interest in life. Indeed, it may as well be stated that the rest of the gang had espoused Dwight's political cause with equal enthusiasm.

It was the Sunday following the night Pole Baker had prevented the meeting between Dwight and Dan Willis, and most of the habitual loungers were present waiting for Mark—short for Markton—to black their boots, and depicting the turn of affairs which looked so bad for their favorite. Wade Tingle was slaving at one of the windows before a mirror in a cracked mahogany frame when they all recognized Carson's step on the balcony, and a moment later Dwight stood in the doorway.

"Hello, boys, how goes it?" asked Wade.

"Oh, we are all right, old man," Tingle replied, as he began to rub the lather into his face with his hand to soften his week-old beard before shaving. "How's the race?"

"It's all right, I guess," Dwight said, wearily, as he came in and sat down in a vacant chair against the window. "How goes it over in the mountains? I understand you've been there."

"Yes, trying to rake in some ads, stir up my local correspondents, and take subscriptions. As to your progress, old man, I'm sorry to say Wiggin's given it a sort of black eye. There was a meeting of farmers over in the Teeth at Miller's spring. I was blamed sorry you were not there. Wiggin made a speech. It was a corker—viewed as campaign material. That chap's failed at the law, but he's the sharpest, most unprincipled manipulator of men's emotions I ever ran across. He showed you up as Sam Jones does the ring-tailed monster of the Heaven box."

"What Carson said about Willis and Johnson's mob was his theme, of course," said Garner above the dog-eared pages of his dime thriller.

"That and ten thousand things Carson never dreamt of," returned Tingle. "Here's the way it went. The meeting was in a busharbor, and the farmers had their wives and children out for a picnic. A long-faced parson led in prayer, some of the old mads piped up into a song that would have ripped ribs in Hill Garner's muscular tympanum, and then a raw-boned ploughman from the Upper Teeth introduced the guest of honor. How they could have overlooked the editor of the greatest agricultural weekly that ever was printed and picked out that skunk was a riddle to me."

"Well, what did he say?" Garner asked as impatiently as if he were cross-examining a sensational witness of importance.

"What did he say?" Tingle laughed, as he wiped the lather from his face with a ragged towel and stood with it in his hand. "He began by saying that he had gone into the race to win, and that he was going to the Legislature as sure as the sun was on its way down in this country and on its way up in China. He said it was a scientific certainty, as easily demonstrated as two and two make four. Those hardy, bony-banded ones before him that day were not going to the polls and vote for a town dule who peried his hair in the middle, wore spike-toed shoes that glittered like a rascal's eye, and was the singular, the remotest set of young card-players and whiskey-drinkers that ever

blackened the morals of a town. He said that about 'the gang,' boys, and I didn't have a thing to shoot with. In fact, I had to sit there and take in more."

"What did he say about his platform?" Garner asked, with a heavy frown; "that's what I want to get at. You never can bust a politician by circulating the report that he drinks—that's what it takes to get them to vote."

"Oh, his platform seemed to be chiefly that he was out to save the common people from the eternal disgrace of voting for a man like Dwight. He certainly piled it on thick and heavy. It would have made Carson's own mother sick away in shame. Carson, Wiggin said, had loved niggers since he was knee-high to a duck, and had always contended that a negro owned by the aristocracy of the South was ahead of the white rascals; stock in the mountains who had never had that advantage. Carson was up in arms against the whitecaps that had come to Darley and whipped those lazy rooms, and was going to punish every man in the bunch to the full extent of the United States law. If he got into the Legislature, he intended to pass laws to make it a penitentiary offence for a white man to shove a nigger off the sidewalk. But he's not going to take his seat in the Capitol of Georgia, Wiggin said, with a yell—if Carson Dwight went to Atlanta it would not be on a free pass. And, boys, that crowd yelled till the day leaves overland clapped an encore. The men yelled and the women and children yelled."

"He's a contemptible rascal," Dwight said, angrily.

"Yes, but he's a slick politician among men of that sort," said Tingle. "He certainly knows how to talk and stir up strife."

CHAPTER V

THE Warren homestead was in a turmoil of excitement over Helen's return. All the ex-slaves of the family for miles around had assembled to celebrate the occasion in quite the anti-bellum fashion. The men and grown boys sat about the front lawn, some on the steps of the long veranda and talked of the day Helen was born, of her childhood, of her beauty and numerous conquests away from them, and of the bare possibility of her degrading to accept the hand of some one of her powerful and wealthy suitors.

In her own chamber, a great square room with many windows, Helen, a tall, graceful girl with light-brown eyes and almost golden hair, was receiving the women and girls. She had brought a present suitable for each of them, as they knew she would, and the general rejoicing was equal to that of an old-time Georgia Christmas.

"You are all here," Helen smiled, as she looked about the room, "except Mammy. Is she not well?"

"Yesum, she's well as common," Jennie, a housemaid, said; "as well as she's been since Pete had that terrible wid de White Caps. Missus, you gwine see er gr'e change in Mam' Linda when you do see 'er. Since dat night, while she seems strong in de body, she looks powerful queer in de face on eyes. Uncle Lewis is worried about 'er. She do set in er cottage do' on rock back an' fo' th all day long. You dear head 'bout dat whippin', ain't you, Missie?"

"Yes, my father wrote me about it," Helen replied, an expression of sympathetic pain on her well-featured face; "but he didn't tell me that he was taking it so hard."

"He hasn't tried," Ar knep bent down, whispering; "Jennie said, obversantly, 'Master knowed how much sto' you set by yo' old mammy. He was de maddest man you ever laid eyes on dat night, but he couldn't do nothin', for it was all over on de White Caps dese shandile back when dry come fum.'"

"Well, I wish Mam' Linda would come to see me," Helen said. "I'm anxious about her. If she isn't here soon I'll go to her house."

"She's comin' right on, Missie," another negro girl said, "but she told Uncle Lewis dat she was gwine fer wait till we all cleared out. She say you her baby, on she ain't gwine ter be bothered wid so many when she see you do fast time after an long."

"That's exactly like her," Helen smiled. "Well, you all must go now; and Jennie, tell her I am dying to see her."

The room was soon cleared of its clustering and laughing throng, and Linda, supported by her husband, a stalwart mulatto, came up from her cottage behind the house and went up to Helen's room. She was short, rather portly, about half white, and for that reason had a remarkably intelligent face which bore the marks of a strong character. Entering the room, after sharply enjoining her husband to wait for her in the hall, she went straight up to Helen and laid her hand on the young lady's head.

"So I got my baby back once mo'," she said, tenderly.

"Yes, I couldn't stay away, Mammy," Helen said, with an impulsive cry. "After all, she's the sweetest place on earth. But you musn't stand; get a chair."

The old woman obeyed slowly, placing it near that of her mistress

* Began in HARPER'S WEEKLY, Vol. LI, No. 3520.

and sitting down. "I'm glad you got back, honey," she said. "I loves all my white folks; but you is my baby, 'n I never could talk to de rest um lak f'kils ter you. Oh, honey, yo' old mammy has had lots en lots er trouble."

"I know, Mammy; father never war about it, and I've heard more sence I got here, I know how you love Peter."

Mammy Linda folded her arms on her breast and leaned forward till her elbows rested on her knees. Helen saw a wave of emotion shake her whole body as she straightened up and faced her with eyes that seemed melting in grief. "Honey," she said, "folks said when de law come en give we all freedom dat de good day was at hand. It was ter be a time er plenty en joy; but, honey, never will I see er slave did I had ter suffer what I'm goin' throo now. In de old time Master looked after us, de lash never was laid on de back er one o' his niggers. He honest white trash never dared to hit one of us; en yit, now, in dis day er glorious freedom, er whole gang come in de dead er night en tied my child wid ropes en turk turn about lashin' 'im. Honey, sometimes I think dey ain't no Gawd fer a person wid one streak er black blood in 'im. Ef dey is er Gawd fer seek en me, why do He let me pass throo what was put on me? I heard dat boy's screams half er mile, honey, en stood in de floor er my house unable ter move, listenin' en listenin' ter his screams en dat lash fallin' on 'im. Den dey let 'im loose, en he come runnin' erlong de street ter find me—ter find his mammy, honey—his mammy who couldn't do nothin' fer 'im. En dar right at my feet he fell over en er faint. I thought he was dead who, en I got down be-side 'im."

"And I wasn't here to comfort you," Helen said, in a tearful tone of self-reproach. "You were all alone in your great trouble."

"No, I wasn't, honey. Thank de lawd, dar is some er de right kind er white folks left. Marce Carson Dwight heard it all, en he come over en raised Peter up en turk 'im in an' laid 'im on de bed. He turk 'im up in his arms, honey, en set to work to bring 'im to. An' after de po' boy was easy en enleep en de doctor guse off, Marce Carson come ter me en turk my hand, 'Mam' Linda,' he said, en pale as ef he'd been sick er long time, 'dis night's work has give me some-ter think erbout. Dis naya't go on forever. Ef I go to de Legislature, I'll see dat dey gwine ter pass laws ter stop dis sort er thing."

"Carson said that?" Helen said, her glance averted.

"Yes, en he was dead in earnest, honey; he wasn't des talkin' ter comfort me. I know kase I done hear suppen else dat happened since den."

"What was that?" Helen asked.

"Why, dey say dat Marce Carson went straight down town en tried ter find somebody dat was in de mob. He heard dat Dan Willis was 'mongst 'em—you know who he is, honey. He's er bad, depraved white man. Well, Marce Carson spoke his mind 'bout 'im an' dared 'im out in de open. 'Ise' Lewis said dat Mr. Garner an' all Marce Carson's friends tried to stop 'im, kase it would go bad agin' 'im in de 'lection, but Marce Carson wouldn't take back er word, en was so mad he couldn't speak. En dat another hard thing, honey," Linda went on. "Des think, Marce Carson cayn't try to help er po' old woman like me widout ruinin' his own chances."

"It is as serious as that?" Helen asked, with deep concern.

"Yes, honey, he never kin win his race less en he act diffint. Dey say dat man Wiggins is laughin' fit ter kill hissef over de way he got de upper hold. I told Marce Carson des Cother day dat he musn't do dat way, but he laughed in my face in dis earnest way he always did have. 'Ef dey vote ergin me ter dat, Mam' Linda,' he say, 'deir voices won't be worth much.' Marce Carson is sho got high principle, honey. His pa think he ain't

worth much, but he's all right. You mark my words, he's gwine ter make a great big man—he gwine ter do dat because he's got er tender heart in 'im an' ain't afraid er anything on dis earth. He may lose dis er 'lection, but he'll not stop. I know young white men thoos en thoos, en I never seen er better one."

"Have you—have you seen him recently?" Helen asked, surprised at the catch in her voice.

"Oh yes, honey," the old woman said, plaintively: "seem lak he know 'im 'im sufferin', en he been comin' over often en talkin' ter me ex Lewis. Seem lak he's so sad, honey, here late. Ain't you used 'im yit, honey?"

"No, he hasn't been over," Helen replied, rather awkwardly. "He will come, though; he and I are good friends."

"You gwine find 'im changed er lot, honey," the old woman said. "You know, I don't believe he ever got over Marce Albert's death." He wasn't ter blame 'bout dat, honey, dough I do believe he feel dat way. Seem lak we never kin fetch up Marce Albert's name widout Marce Carson git sad. One night here late, when Lewis was talkin' 'bout yo' pa goun' off en fetchin' Marce Albert home, Marce Carson hang his head an' say, 'Mam' Linda, I wish dat these could be go over ergin. I would act so diffint. I never seed whar all dem serapes was leadin'. But it learn me a lesson, Mam' Linda."

"That's it," Helen said, as if to herself; "he survived. He has profited by the calamity, but my poor, dear Marce, who want no further, for her voice broke and her eyes filled with tears."

"Don't think erbout dat, honey," the old Linda said, consolingly. "You got yo' own great trouble lak I has, but you is at home wid we-all now, en you must not be sad."

"I don't intend to be, Mammy," Helen said, wiping her eyes on her handkerchief. "We are going to set to work to try to do something to keep Pete out of trouble. Father thinks it is his associates that are to blame. We must try to keep him away from bad company."

"Dat what I want ter do, honey," the old woman said, "en ef I des had some-ter fer send 'im so he could be away from dis town I'd be powerful glad."

CHAPTER VI

An Helen anticipated the young ladies of the town, her most intimate friends and school-mates, came in a body that afternoon to see her. The reception opened in the great parlor down stairs, but it was not many minutes before they all found themselves in Helen's chamber, fluttering about and chattering like doves in their spring plumes.

"There is no use putting it off longer," Ida Tarpley, Helen's cousin, laughed; "they are all bent on seeing you this afternoon."

"Oh," Helen protested, her color rising. "I don't like to exhibit my wardrobe as if I were a dressmaker, or a society woman who is hard up and trying to dispose of them."

"The idea of your not doing it, dear," Mary King, a little blonde, said, "when first one of us has seen a decent dress or hat since the summer visitors went away last fall."

"Leave it to me," Ida Tarpley laughed. "Get off the bed, you girls. I want something to lay them on. If it were only evening gowns, I'd make her put on that gown she wore at the Governor's ball. You remember what the 'Constitution' society reporter said about it. He said it was a 'poet's dream.' If I had one it would be in a dream."

Later in the afternoon the young ladies had all gone except Ida Tarpley, who lingered on the veranda.

"I'm glad the girls didn't have the bad taste to embarrass you by questioning you about Mr. Sanders," Ida said. "Of course it

Drawn by F. B. Mumma

A moment later Dwight stood in the doorway

is all over town. Uncle spoke of the possibility of it to some one and that put it afloat. I'm anxious to see him, Helen. I know he must be nice—everything, in fact, that a man ought to be, for you always had high ideals."

Helen flushed almost angrily, and she drew herself erect and stood quite rigid, looking at her cousin. "Ida," she said, "I don't like what you have just said."

"Oh, dearest, I'm sorry, but I thought—"

"That's the trouble about a small town," Helen went on. "People take such liberties with you, and about the most delicate things. Down in Augusta my friends never would think of saying I was actually engaged to a man till it was announced. But here at home it is in every mouth before they have even seen the gentleman in question."

"But you really have been receiving constant attentions from Mr. Sanders for more than a year, haven't you, dear?" Miss Tarpley asked, blandly.

"Yes, but what of that?" Helen retorted. "He and I are splendid friends. He has been very kind and thoughtful of my comfort and I do like him. He is noble, pure, and good. He extended the sweetest sympathy to me when I went down there under my great grief, and I never can forget it; but, nevertheless, I have not promised to marry him, Ida."

"Oh, I see; it is not actually settled yet," Miss Tarpley said.

"Well, I'm glad, I'm very, very glad."

"You are glad?" Helen asked, wonderingly.

"Yes, I am. I'm glad because I don't want you to go away off down there and marry a stranger in us all. I really hope something will break it up. I know Mr. Sanders must be crazy about you—any man would be who had a ghost of a chance of winning you—and I know your aunt has been doing all in her power to bring the match about—but I know you, dear, and I know you would not be happy."

"Why do you say that so—so positively?" Helen asked, coldly.

"Because," Ida said, impulsively, "I don't believe a girl of your disposition could ever love in the right way more than once, and—"

"And what?" Helen asked, her proud lips compressed, her eyes flashing defiantly.

"Well, I may be wrong, dear," Miss Tarpley went on, "but if you were not actually in love before you went to Augusta you were very near it."

"How absurd!" Helen exclaimed, with a little toss of her head.

"Do you remember the night we all drove in couples out to the Henderson party? I went with Mr. Carson, and Carson Dwight took you? Oh, Helen, I met you and Carson walking together in the moonlight under the apple-trees in the old meadow, and if ever

a pair of humans beings really loved each other you two must have done it that night. I saw it in his happy, triumphant face, and I saw it in the fact, Helen dear, that you allowed him to be with you so much when you knew others were waiting to see you."

Helen looked down; her face was obscured ever, her proud lip twitched. "Ida," she said, tremulously, "I don't want you ever again to mention Carson Dwight's name to me in—in that way. You have no right to."

"Yes, I have," Ida protested, firmly. "I have the right as a loyal friend to the best, most suffering, and noblest man I ever knew. You really cared very, very much for Carson, once, but after your great loss you never looked on him the same again."

"No, nor I never shall," Helen said, sharply. "I admire him and shall treat him as a good friend when we meet, but that will be the end of it. Whether I cared for him or not as young girls care for boys is neither here nor there."

"And all simply because he was a little wild at the time your poor brother—"

"Stop!" Helen said, "don't argue the matter. I can only now associate him with the darkest hour of my life. I'm tempted to tell you something, Ida," and Helen bowed her head for a moment and then went on in an unsteady voice. "When poor Albert's trunk was brought home it was my duty to post the things it contained in trunk. There I found some letters to him, and one dated only two days before Albert's death was from—"

from Carson Dwight. I read only a portion of it, but it revealed a page in poor Albert's life that I had never read—never dreamt could be possible."

"But Carson," Ida Tarpley exclaimed, "what did he have to do with that?"

Helen swallowed the lump in her throat, and with a cold, steel gleam in her eyes she said, bitterly:

"He could have held out his hand with the superior strength you think he has and drawn the poor boy back from the brink, but he didn't. The words he wrote about it were light, flippant, and heartless. He treated the whole awful situation as a joke, as if—as if he himself were familiar with such unresponsible things."

"Ah, I begin to understand it all now!" Ida sighed. "That letter, coupled with your brother's awful death, was such a terrible shock that you cannot feel the same towards Carson. But, oh, Helen, you would pity him if you knew him now as I do. He has never altered in his feelings towards you. In fact, it seems to me that he loves you even more deeply than ever. And, dear, if you had seen his patient efforts to make a better man of himself you'd think more kindly of him. You will understand him some day, but it may then be too late. I don't believe that

"I know young white men thou art thou, so I never seen or better one"

women have real sweethearts but once. You may marry the man you most want to take, but your heart will turn back to the other. You will remember, too, and bitterly, that you condemned him for a foolish fault which you ought to have pardoned."

"Do you think so, Ida?" Helen asked, her great brown eyes averted.

"Yes, and you'll remember, too, that while his other friends were trying to help him on, you turned against him. He's going to make a great and good man, Helen. I've known that for a long time. He is having his troubles, but even they will help him to be stronger in the end. His greatest trial is going on right now while folks are saying that you are going to marry another man. Pshaw! you may say what you like about Mr. Sanders' good qualities, but I know I shall not like him. He—he." Ida concluded, as she turned to go, "is a coward, and I'm dead against him."

Helen remained on the veranda, after her cousin had left, till it was twilight. She was about to go in, as it was near twilight, when she heard a growling voice down the street and saw old Uncle Lewis returning from town, driving his son, the troublesome Peter, before him.

"You go right then dat gate en back ter dat house, you black imp or 'surrection," he thundered, "or I'll tek er board en lambast de life out'n you. Here it is night-time en you ain't got no store-wood fer de kitchen, en beea lyin' round dem cotton-wagon raisin' no' rovers wid dem mountain white men."

"What's de matter, Uncle Lewis?" Helen asked, as the boy passed round the corner of the house and the old man, out of breath, passed at the steps.

"Oh, Missy, you don't know what me 'n' Linda got to bear up under. No, I don't know how ter manage dat boy. Linda right now is eat'n 'er head wid worry. Black n' white folks are tell'n 'bout an hour ago dat Pete en some no' terkin' s-liggers was down at de warehouse a-singin' some mountain white men. Buck heard Pete say dat Johnson en his gang couldn't whip him erkin' 'bout gittin' in trouble, en dey was in er luck of er big row dat de marshal busted it up. Black ain't no fond, fer a black man, Missy, en he tol' me 'n' Linda if we don't manage ter git Pete out'n de company he keeps dat dem white men will sho stratin' 'im up."

"Yes, something must be done, that's plain," said Helen, sympathetically. "I know Mam' Linda must be worrying, and I'll go down to see her this evening. It doesn't seem to me that a town like this is best for a boy like Pete. I'll speak to my father about it, Uncle Lewis. It won't do to have Mammy bothered like this. It will kill her. She is not strong enough to stand it."

"Oh, Missy," the old man said, "I wish you would try ter do some." He 'n' Linda is sho at de end er our rope."

"Well, I promise you I'll think about it, Uncle Lewis," Helen said, and, much relieved, the negro trusted homeward.

CHAPTER VII

One beautiful morning near the first of June, as Carson was strolling on the upper veranda at home waiting for the breakfast-bell, Keith Gordon came by on his horse on his way to town.

"I heard the news!" he called out, as he reined in at the gate and leaned on the neck of his mount.

"No. What's up?" Carson asked, and as he spoke he saw Helen Warren emerge from the front door of her father's house and step down among the dew wet rose-hedges that bordered the brick walk.

"Terrible enough in all reason," Keith replied. "There's been a terrible murder over near your farm. Abner Johnson, who led that mob, you know, and his wife were killed by some negro with an axe. The whole country is up in arms and crazy with excitement."

"Wait! I'll come right down," Carson said, and he disappeared into the house. And when he came out a moment later he found Helen on the sidewalk talking to Keith, and from her grave face he knew she had overheard what had been said.

"Isn't it awful?" she said to Carson, as he came out at the gate.

"Of course it is the continuation of the trouble here in town."

"How do they know a negro did it?" Carson asked, obeying the natural tendency of a lawyer to get at the facts.

"It seems," answered Gordon, "that Mrs. Johnson lived barely long enough, after the neighbors got there, to say that it was done by a yellow negro, as well as she could see in the darkness. In their fury the people are roughly handling every yellow negro in the neighborhood. They say the negroes are all hiding out in the woods and mountains."

Then the conversation paused, for old Uncle Lewis, who was at work with a pair of garden-shears behind some rose-hedges close by, uttered a groan, and, wide-eyed and startled, came towards them.

"It's awful, awful, awful!" they heard him say. "Oh, my Gawd, have mercy!"

"Why, Uncle Lewis, what's the matter?" Helen asked, in sudden concern and wonder over his manner and tone.

"Oh, Missy, Missy!" he groaned, as he shook his head despondently. "My boy over dar 'most 'ves right now. Oh, my Lawd, I know what dem white folks gwine ter say fust thing, kase Pete had no little sense ter—"

"Stop, Lewis!" Carson said, sharply. "Don't you be the first to implicate your own son."

"I ain't, master!" the old man groaned, "but I know dem folks done done it 'n' de die."

"I'm afraid you are right, Lewis," Keith said, sympathetically. "He may be absolutely innocent, but since his trouble with that mob Pete has really talked too much. Well, I must be going."

As Keith was riding away old Lewis, muttering swiftly to himself and groaning, turned towards the house.

"Where are you going?" Helen asked, still lingering beside Carson.

"I'm gwine ter try keep Linda fum hearin' it right now," he said. "If Pete git in it, Missy, it gwine ter kill yo' old mammy."

"I'm afraid it will," Helen said. "Do what you can, Uncle Lewis. I'll be down to see her in a moment."

As the old man tottered away Helen looked up and caught Carson's troubled glance.

"I wish I were a man," she said.

"Why?" he inquired.

"Because I'd take a strong stand here in the South for law and order at any cost. We have a good example of what our condition is in actual danger. Pete may really be innocent, and no doubt is, for I don't believe he would do a thing like that, so matter what the provocation, and yet he hasn't any sort of chance to prove it."

"You are right," Carson said. "At such a time they would kill him for nothing else than that he had dared to threaten Johnson, as he is known to be a negro."

Yes, justice administered to both races alike is at least the first step towards the solution of the problem."

"Fier, poor old Mammy!" sighed Helen. "Oh, it is awful to think of what she will suffer if—if—" Carson, do you really think Pete is in actual danger?"

He hesitated for a moment and then he met her stare frankly. "We may as well face the truth and be done with it," he said.

"No negro will be safe over there now, and Pete, I am sorry to say, is of all."

"If he is guilty he may run away," she said, short-sightedly.

"If he's guilty we won't want him to get away," Carson said, firmly. "But I really don't think he had anything to do with it."

Helen sighed. They had stepped back to the open gate and there they gazed side by side. "How discouraging life is!" she said.

"Carson, planning to get Pete over to your farm, where he would be out of the reach of disruptive associates, you and I were acting on our purest, noblest, impulses, and yet the outcome of our efforts may be the gravest disaster."

"Yes, it seems that way," he responded, gloomily, "but we must try to look on the bright side and hope for the best."

On parting with Helen, Carson went into the big old-fashioned dining-room, and hurriedly drinking a cup of coffee, he went down to his office. Along the main street, on the corners and in front of the stores, he found little groups of men with grave faces all discussing the tragedy. More than once in passing he heard Pete's name mentioned, and for fear of being questioned as to what he thought about it he hurried on. Carson was an early riser, and he found him at his desk writing letters.

"Carson, about it accounts," Garner said, "your man Friday seems to be in a ticklish place over there, innocent or not—that is, if he hasn't had the sense to skip out."

"Somehow I don't think he is guilty," Carson said, as he sank into his big chair. "He's not that stamp of negro."

"Well, I haven't made up my mind on that score," the other remarked. "Up to the time he left here he seemed really harmless enough, but we don't know what may have taken place since then between him and Johnson. Funny we didn't think of the danger of striking match to tinder like that. I admit I was in favor of sending him. Miss Helen was so pleased over it, too. I met her the other day at the post-office, and she was telling me with absolute delight that Pete was doing well over there, working like a good fellow and behaving himself. Now, I suppose the dear girl will be terribly upset."

"Carson, I wonder," said the mountain people, in tones of excitement, for acting rashly, and yet right here in this quiet town half the citizens have already made up their minds that Pete committed the crime. Think of it, Garner."

"Well, you see, it's pretty hard to imagine who else did it," Garner declared.

"I don't agree with you," said Carson, warmly, "when there are half a dozen more negroes who were whipped just as Pete was and who have horrible characters. There's Sam Dailow, the worst negro I ever saw, ex-convict, and as full of devilment as an egg is of meat. I saw him face the next day after he was whipped, and I never want to see it again. I'd hate to meet him in the dark named. He wasn't making open threats as Pete was, but I'll bet he would have handled Johnson or Willis roughly if he had met either of them alone."

"Will, we are not trying the case," Garner said, dryly. "If we are I don't know where the fees are to come from. Gitting money out of an imaginary case is too much like a lawyer's first year in the business."

To be Continued.

MOVING A NEWSPAPER IN A SINGLE NIGHT

By CHARLES A. SELDEN

THE recent move of the *Evening Post* to the seventh home that newspaper has occupied since its founding by Alexander Hamilton and several of his Federalist associates, one hundred and six years ago, is interesting for various reasons. There is the fact of the physical removal itself, which is the case of a newspaper is particularly remarkable, for in these days readers will accept nothing as a sufficient excuse for the mislaid of an edition, so the change of habitation, with all the shifting of heavy and complicated machinery, must, practically, be made overnight. Secondly, the new building probably contains more facilities for the orderly "getting-out" of a daily paper and more comfort and convenience for those engaged in the production than any structure devoted to the same purpose in the world. And, furthermore, the selection of the new site, on Vesey Street, not much more than a stone's throw from the *Evening Post's* old building, at Broadway and Fulton, is good evidence that "way down town" is still the proper location for New York newspapers, and will continue to be so for many years to come.

This new site, which comprises three lots on Vesey Street, just off of Broadway, has a depth of 100 feet, and frontage of 75 feet. Across the way is St. Paul's Churchyard, and in the rear is the old St. Peter's Church at Barclay Street, so that, front and rear, there is assurance of ample light in perpetuity, one of the greatest assets that a newspaper can have.

The building is of steel skeleton construction, with thirteen floors above ground and two basements. For its exclusive use the *Evening Post* has reserved the four top floors, a third of the street floor, and both basements.

Lefty piers of Indiana limestone, framing iron bay-windows, painted in bronze, form the front of the building, and the structure is surmounted by a copper mansard roof.

The new Home of the New York "Evening Post"

THE VIEW IS ACROSS ST. PAUL'S CHURCHYARD PRACTICALLY FROM THE SITE OF THE OLD STRUCTURE AT BROADWAY AND FULTON STREET

In the centre panels of the metal bay-windows over the second, third, fourth, fifth, and sixth floors on the front there are five different oval reliefs, as decorative, taken from the marks of well-known printers of the sixteenth and seventeenth centuries. The models for these were made by Miss Harriet Clark, sculptor. These printers' marks are as follows: Over the second floor, Elsevir of Amsterdam, 1629; over the third floor, Jacobus of Strasbourg, 1550; over the fourth floor, Nicolaus de Francœdia, 1510; over the fifth floor, Thomas Bruinen of Paris, 1575; and over the sixth floor, Aldus of Venice, 1540.

Also on the front of the building, in niches at the tenth-floor level, are four monumental statues of freedom, typifying in a way the four periods of publicity. The first, or most easterly, of these represents the first period, when news was carried entirely by the spoken word, and is a male figure leaning forward, listening. The second figure represents an early period of the written word, and is a monk or illuminator. These first two figures are by Eodile Humboldt Kohn, the sculptor.

The third figure represents the dissemination of news through printing, and is that of a printer of the period of Gutenberg, who stands with his hand resting on the top of a primitive printing-press. A figure meant to indicate the potentialities of the newspaper is the fourth one, which is designed as that of an editor, in modern garb (wearing a long, loose coat), holding a pen in one hand and a sheet of paper in the other, while one foot rests upon a pile of papers. These two figures are by the sculptor Gut-zon Burgheim.

In the four figures, which are nearly two feet high, the composition has been treated in such a way as to "carry" at a long distance, and the drapery has been kept very simple, so that the main effect is that of a decorative figure attached directly to the building and forming a part of it, rather than a distinct or separate

The Library

The Trustees' Room

statue. No attempt at portraiture has been made. In discussing a newspaper and its building it is customary to talk of "traditions" and "atmosphere" supposed to be attached to a home long occupied. The *Evening Post* surrendered nothing of this by moving. The serenity of the Vesey Street structure is more than offset, so far as atmosphere is concerned, by the library, which is a storehouse of the memorabilia of *Evening Post* traditions (that how nothing of their flavor by being, at last, properly housed and made readily available for the inspiration of and enjoyment by the newspaper workers of the present and coming generations. On the walls between the bookshelves and on the supporting columns are many pictures of ancient New York streets, framed copies of old editions printed in the days when it was customary to put back reviews on the front page, and autograph letters from such great Americans as Patrick Henry and Alexander Hamilton.

About the library on three sides are the rooms of the several editors of the newspaper and of the *Yorkian*, and opening from the library on the north side is the "city room," where the news is received and prepared for publication.

On the top floor is the main composing room, where the linotype machines are used and the newspaper forms are made up. It is of the same size as a hand-composing room for the setting of advertisements, just beneath it. Especially notable is the amount of natural light enjoyed by the compositors, which is admitted to their workmen not only through the three big dormer-windows

in front and many ordinary windows on the side and in the rear, but also, and chiefly, through three saw-tooth skylights in the roof, facing north, which extend from side to side of the structure. Adjoining the main composing room are the stereotype department on one side and rooms for the proof-readers on the other.

In order to get sufficient cold water for use in the stereotyping department, and also for other manufacturing purposes, an artesian well was bored to a depth of 650 feet in the rock underneath the building, and an ample supply of satisfactory water has been procured by this means. This water is pumped up by an air-compressor into a tank on the roof, only large enough to hold a sufficient supply to keep a constant change of cold water available for the objects noted.

The press-room, equipped with the latest appliances for the gaining of minutes and fractions of minutes in running off an edition, is in the lower basement, surrounded by a balcony, to which sight-seers are always welcome. The business departments have their quarters on the main and the sixth floors.

The last thing has been done for the comfort of the employees. On the eleventh floor, for instance, there is an excellent restaurant and kitchen. There are also "rest rooms," and the stereotypers, who have to heat the breast of the heat in the making of a newspaper, have shower-baths.

Four elevators, express and local, serve the tenants, and the stairs are of metal and marble.

ASIA'S FLOOD OF JAPANESE BEER

HOW will the people of the Far East be affected by the millions of gallons of beer they are drinking every year, and the still greater number of gallons they will soon absorb? The facts at hand furnish a grave problem for ethnologists, and a report made by Henry K. Miller, United States consul general for Japan, contains figures showing the growth of the beer-drinking habit in that empire which will startle Prohibitionists. Incidentally, Mr. Miller's report disposes of the twaddle of the complacent glib-tongued who say that the Japanese are the most temperate people in the world. They are all very fond of their "birds." The consul-general traces the growth of the beer production in Japan from a mere trickle in 1885 to a river of one million gallons in 1904, and to a foaming torrent of six million gallons in 1906, which now bids fair to swell, burst all bounds, and irrigate Korea and China, especially in Manchuria.

Although the first Japanese brewery was established by foreigners in Yokohama, in 1855, and the master brewers in this one and its later rivals have always been Germans, the prospect is that hereafter the entire management will be in the hands of the Japanese. In this as in all other businesses, trades, manufactures, and the learned professions, the Japanese are eagerly riding themselves of foreign guidance, in the belief that they now know all that is necessary to be known about everything.

The oldest brewery, Mr. Miller writes, has now been sold by its foreign proprietors to a Japanese company for \$1,600,000. This is not surprising when one learns that the latest dividend was at the rate of twenty per cent. per annum.

The consul-general's figures show not only how rapidly the consumption of beer has increased in Japan, but how swiftly the flood has gushed out among neighboring thirty lands.

"In 1905," he writes, "beer was exported to the value of \$688,723, while in 1906 22,988 dozen pint bottles, with a value of

\$15,797, 655,224 quart bottles, worth \$239,325, and 64,538 casks, worth \$26,090, making a total of \$781,828, were exported. China has always taken the bulk of the exports, although Korea has been consuming an increasing quantity year by year, in 1905 taking a value of \$191,583, as against \$15,463 in 1900.

"The greater part of the export to China goes to Manchuria, comparatively little entering northern and central China. The establishing of foreign breweries at Shanghai and in northern China, such as the brewing company at Kiaochow, has interfered and will continue to interfere somewhat with the sale of Japanese beers in their local districts, but in Korea and Manchuria there is an opportunity which the Japanese are not slow to grasp. The relatively low price of the leverage, the scarcity of the market, and cheap transportation, and the fact that the Japanese already in these districts will use and introduce among the native element a demand for the commodity, give Japan every advantage over foreign competition. Further, there is in contemplation the establishing of a branch brewery in Manchuria. Branch breweries for Tairen (Dahly) and Korea are also contemplated, to be started in 1907.

"The value of advertising is well understood, few native products having been better brought to the notice of the public than these. There are few places in Japan where beer cannot be had, for while it will never entirely supplant the national beverage, sake, it is winning a very important position. The bottled beer is sold at retail at sixty cents per dozen for the pints and \$1.15 for the quarts, but is seldom retailed from the rack."

"Ship me somewhere east of Suez" will have to be rewritten, for it is not the white man in the East who will raise a thirst, but the eager and capacious son of the soil. How will the bewitching of Asia affect the Asiatic? Will he become still more drowsy and apathetic? Will he develop pugnacity? The problem is fascinating.

COUNTING CHINA'S MILLIONS

By E. H. CLEMENT

WE have seen no attempt to frame a graphic conception of the stupendous aggregate of China's millions half so successful as that of our veteran American Baptist missionary, the Rev. Dr. William Ashmore (now living at Wollaston, Massachusetts). It was first worked out during his residence at Swatow, China, in 1868, and printed there, but it will serve exceedingly well at the present moment when in various relations, political, military, and social, as well as humanitarian and religious, the world's attention is being concentrated upon China. Dr. Ashmore's method is to imagine the population of 460,000,000 on the march in review. Before he gets through, the reader's head fairly aches and reels at the passing of the interminable multitude.

The authorities differ on the population of China. The old official census of 1812 made it 300,000,000. A late statement based on partial returns puts it at 352,000,000; but it is often quoted in round numbers at 400,000,000. Dr. Ashmore takes the lowest of all these figures in the calculations that follow. For a basis of comparison he adopts the census of the nation of 6,000,000 which passed before Moses, "field-marshal of the Living God," on its march from one country to another by the way of the Red Sea, the wilderness of Paran, and the river Jordan. That payment of the tribes of Israel has inspired literature and all the arts from that day to this, has been celebrated in legend and music, and yet no adequate conception has probably ever been formed of the stupendous catalogue. But that was 6,000,000 as against the 360,000,000 of Chinese which Dr. Ashmore arrays. To help us form the picture he calls to mind the review of the United Armies of the Union at Washington after the Civil War. Anybody privileged to possess a seat for that pageant has talked of it ever since. For witnessing the review of China's hundreds of millions Dr. Ashmore wishes us to get ready our tents. "Make them good and strong, able to endure pelting storms and changes of season, for it is no holiday's work you are settled down to."

Twelve hours a day is long marching, but he proposes keeping the vast army of living men, women, and children going at that rate. Furthermore, he makes them march in close order; and not only that, but in "lock-step," allowing but a foot and a half to each person instead of the two and a half feet to each man allowed in military close-order marching. Twenty miles a day is good work for a column on the march, and at that rate each million will require fourteen days in passing.

And now with all things ready the grand old missionary starts the columns and review on the first day of June. He marshals the Chinese by their great provinces. First comes CHIH, the capital province of the empire, about the size of the State of Illinois. In that space is packed a population of 27,300,000. They will reach 7602 miles, nearly, and the line will stretch from the steps of the Capitol at Washington, across the continent, and far away into the middle of the Pacific Ocean, and will require 397 days in passing.

"You see you are in for it," says Dr. Ashmore, "you thought you would sit it out on that line if it took all summer, but summer comes and summer goes and there you are still; lay in a stock of coal, for winter will be upon you before a quarter of them have gone by; autumn passes, winter passes, spring passes, and you are well into the heat of a second summer before you have seen the last of that column, and that is only one column."

Next he belies on the river Shantung, with its population of 29,558,764, reaching in procession 8250 miles, and taking 411 days to pass. Next Shensi, with its population of 14,804,210; Honan, with 23,657,171, making a column 6534 miles long, and requiring 326 days to pass; Kiangsu, with a population of 27,843,201, enough to stock an empire of itself as large as Japan, France or Germany. This Kiangsu division of the procession will reach 10,750 miles, and will require 537 days to pass. While the Kiangses above are passing, you will have kept two Merry Christmases and seventy-seven Sundays. Then comes Szechuan, another equally large empire within the empire, and then Kiangsi with a line 6547 miles long; Chekiang, one more a division large enough to set up one of the great powers of Europe, with its 20,256,724 people in a line. Now Fukien, a comparatively small population from a hilly region of only about 15,000,000. Next the great national province of Hupeh, with its population, 27,276,600, stretching back 7775 miles; yonder comes the yellow imperial banner of Hunan, a file of 18,652,267 human beings; Kwangtung next, with its 20,000,000; Kwangsi, Yunnan, and Kweichow, three of the smallest of them all, with only about 10,000,000 among them; after that Szechuen, one of the great provinces, with another 25,000,000 of people; the end is now drawing near; Shensi with 10,000,000, Kiangsu with 27,000,000, and reaching over 4000 miles, close up the column. This procession has been over thirteen years in passing.

Dr. Ashmore has succeeded in this sketch in conveying to the Western mind at last some idea of the populousness of one of the great Asiatic "red-races." He had himself learned to appreciate it, passing among them a score of years in the prime of his life, studying their languages and their psychology, and possessing their confidence and their friendship. The root of the matter was deep in him, too, his heart continually yearning to bring them the advantages of modern civilization—not for his own glory, or the glory of his church, but for the brotherhood of man. The other day the doctor was all ready to set out anew for the field of his arduous life's work, inspired by the more recent openings of the way; but at the last moment the doctors forbade the journey. Still, his spirit, ever young and eager, flies to and abides with these huddled myriads he depicts so powerfully. The picture reminds one of De Quincey's opinion-vision of the reddest hosts of Heaven's amphitheatre shouting their hail-hails, in tiers upon tiers of the reformed, and of those other hosts of equal vastness where "unsavelling regret," "unsavelling regret," sweeps to and fro in storms of wailing.

The Murder Charge at a Labor Union's Door

(Continued from page 765.)

ground with great caution, and found the bomb exactly where Orchard said it was, and exactly of the description Orchard had given. The plan to kill H. H. Moffat was to drop a bomb from a window as he walked along the street. The plan was foiled by Mr. Moffat's sudden departure for Europe.

The most notable attempt at train-work was on the night of November 14, 1905, when a train carrying fourteen hundred and about 200 men and women to a ball in Victor, Colorado, from Cripple Creek, nearly plunged over the curve on a 300-foot embankment. A rail had been loosened. A friend of the engineer did not want his life lost, and warning was given to him to crawl along that part of the road. He did so, and probably saved a score of lives.

There has been no sign of trouble for or about the court-room in which Haywood's trial is being carried on, although many persons, remembering the turbulence of the first of these days, have predicted violent demonstrations by Haywood's sympathizers. But there is a squad of special policemen on guard at the court-house, the militia are ready to respond instantly to any call, and the city of Idaho up to the time of this writing has remained as tranquil as a country rhumyland.

Much difficulty has been experienced in finding twelve jurors to try Haywood. None of the talismen summoned by Sheriff Shad Hoshing has seemed averse to capital punishment or to circumstantial evidence, but, although the jury has been filled again and again, the attorneys on either side have managed, on one excuse or another, to empty the chairs. The trend of the questions addressed to the talismen indicates that much of the corroborative of Orchard's remarkable confession will depend upon circumstantial evidence.

Impossible

THE GERMAN's meagerness for humor is more proverbial than his aversion to ventilation, though perhaps less real. A year or so ago an American student in Berlin was attending a lecture in a room dreadfully close. To keep awake he began whispering to a German at his side the story of Mark Twain about the man who lived all his life in a chronic fear of fresh air. The relatives of this man, as is well known, decided after his death to have his remains cremated; and the climax of the story occurs when the undertaker, opening the door of the oven to see whether incineration was complete, was appalled to hear the corpse speak out and request him to close the door and shut off the draught.

The American sprayed the joke as effectively as he could. But never a smile was to be seen. His German friend remained for several moments in a perplexed study. Then he leaned over to the American and said: "But how could that be? The man was dead!"

"Antiques" Abroad

THE season for the annual influx of American into Europe is approaching, and in anticipation of a busy season, the "antique" dealers, according to the reports of the American consular representatives, are making preparations to part with their valuable and "ancient" wares at the usual sacrifice prices.

All through the winter the manufacturers of antiques have been kept busy to fill the orders from America. The aging season is soon on, and when the goods are offered for sale they will be sufficiently battered, scratched, or frayed, as the case may be. Many old pieces of furniture of the various epochs—Renaissance, Louis Quatorze, Empire, Regence, etc.—are far inferior into decay that but a square foot of the original material remains in a fair state of preservation, have been bought up and rebuilt along old lines, and will be sold for the genuine old piece. Besides these rebuilt articles, most dealers carry in stock

a line of cheap imitations, absolutely counterfeit, which will be unloaded on the moneyed but ignorant American tourist. Even the deception of fairly expert collectors is not safe, and even when a genuine antique is secured, the price charged is out of all proportion to its value—that is, the same thing could be bought in the small towns or in the country for less than half what the city dealers get. The interior of the countries and the out-of-the-way towns are the sources of his supply of genuine antiques, and his price is advanced at least 100 per cent. This should be a hint to those who really desire to secure genuine antique at reasonable prices.

Bruges seems to be the particular Mecca of the euro-walker from America, and has the reputation of being both "easy" and rich in finds. The visitors do not seem to remember that for years past the dealers have investigated every hole and corner, and have acquired everything even worthy of antiquity, but jump at everything offered. Dealers are active in putting their wares in the way of travelers, and have agencies at such places as Bruges, or send their goods to local dealers to be sold on commission. All American travelers are regarded or reputed to be millionaires, and pay several times the sum for which a European would secure the identical article.

A visit to the workshops of antique dealers will show them pounding modern brass to represent the old-time article. Fragments of a few years back which has become worn-out or decayed is made over into pieces representing the old Flemish type, and the imitation is likely to deceive the ordinary collector.

Many tricks are employed by dealers in these fake antiques, a favorite one being to supply some small shop, eight-stone, or crafts with an "old" painting. The place selected is always unpretentious and the painting is hung in a dark corner. If a spider will be so kind as to spin a few cobwebs over it, so much the better. It is usually in places of this sort that "great finds" picked up for a "song" are made.

The facts of the case are, that if American tourists want genuine antiques, they can get them, if they know what they are getting, but will have to pay what is certainly a good price; and that if they purchase articles at a low price it is a practical certainty that they will secure something which is actually not worth carrying from the shop.

In an East Side Kindergarten

LITTLE SOLLY (his head poked by intellectual air as he leans on the black-board a neck of a milkmaid and rattle), "One—two—three—three cows!"

TEACHER, "Yes, and what else?"

LITTLE SOLLY (in triumphant haste), "And no lady!"

TEACHER, "How many altogether?"

LITTLE SOLLY, "One—two—three—two (kicks and sweeps his right foot up and down his left leg.)—One—two—three—three— (pauses in a desperate effort to count a little further, then gasps) "O-o-o-o-o-o-o-o-o-o, teacher, I don't know how to add up cows and ladies!"

To Cheer Mosquitophobes

UNITED STATES CONSUL-GENERAL W. H. MICHAEL sends from Calcutta news to cheer the hearts of mosquitophobes.

"Citronella oil," he writes, "is distilled from grass grown in Ceylon, with an estimated 60,000 acres now in cultivation. Two crops are grown in a year, and the harvests occur in July or August and in December. The average yield of oil to the acre of grass is from 300 to 400 ounces in the summer, and about half that in winter. The record year of exports was 1900, when they amounted to 1,500,000 pounds. It is inferior to lemon-grass oil, and has been used in adulterating the latter in foreign laboratories.

"A supply of Indian lemon-grass roots and

seeds will be sent to the Agricultural Department at Washington, which is already interested in experimentation with essential oil grasses."

The Early Bird

BIANCO HENWORTH, of Connecticut, is noted for his funny stories, and his latest is said to be about an old reprobate who decided to repent, and amounted to every one that whether strong he had done should be made right. So a man whom he had cheated out of a large sum of money went around at midnight to demand it.

"But what did you come at this hour for, and wake me up? Why don't you till tomorrow?" said the old miser, crossly.

"I came now," replied the man, "to avoid the rain."

To Save Miners' Lives

RECENT successful experiments have been conducted in a Yorkshire mine with two kinds of artificial breathing apparatus to enable miners to work in irrespirable air after an explosion. A portion of the mine had been provided with the conditions existing after an explosion. Four men were equipped with the contrivances and remained in the place several hours engaged in such work as would be necessary after an explosion. It is believed that these devices would enable a corps of trained men to enter a mine filled with foul air, to restore the ventilation, and to save many lives.

Ambiguous

AT the death of a much-loved pastor some years ago, the vestry of a prominent New York church resolved to place a tablet to his memory in the vestibule of the church. In due time the tablet appeared in its place, where it still remains. It has caused not a few smiles; for, after reciting a list of the deceased pastor's virtues and labors, it closes with the question:

"Now the people of God have rest."

FOR THE NURSERY—FOR THE TABLE.

For all ages, in all climates, under all conditions, Pears' Baby Food, Condensed Milk and Sterilized Cream, Egg-cream, Malt & Cereal, etc., are of proven merit. Superior to any other.

THE BEST WORK LOZENGES FOR CHILDREN AND ADULTS' VERIFICATION COMBIS. 15 cents a box.

ADVERTISEMENTS

Pears'

The public's choice since 1789.

"Your cheeks are peaches," he cried.

"No, they are Pears," she replied.

Pears' Soap brings the color of health to the skin.

It is the finest toilet soap in all the world.

JAPAN'S AMBASSADOR OF PEACE

GENERAL BARON TAMEMOTO KUROKI, THE HERO OF LAO-TANG AND OF MUKDEN, WEARER OF THE FIRST-CLASS ORDER OF THE RISING SUN AND THE GOLDEN KITE, IS VISITING THIS COUNTRY AS THE GUEST OF THE UNITED STATES. IN THE PHOTOGRAPH, TAKEN DURING THE GENERAL'S STAY IN WASHINGTON, THE DISTINGUISHED JAPANESE MAY BE SEEN IN THE CENTER OF THE GROUP, WEARING A GOLF CAP. AT HIS LEFT, IN THE FOLLOWING ORDER, ARE GENERAL MASAHIDE, U. S. A., GENERAL WOOD, U. S. A. (FORMER MILITARY ATTACHE AT TOKYO), AND CAPTAIN TANAKA (ADJUTANT TO GENERAL KUROKI)

ON THE MARTYRDOM OF ENGLISH

EXTRACTS FROM "A REPORT ON THE EXAMINATIONS IN ENGLISH FOR ADMISSION TO HARVARD COLLEGE"

A QUESTION that has puzzled editors for many years is answered, at least in part, in "A Report on the Examinations in English for Admission to Harvard College," now published by Messrs. C. N. Greenough, F. W. C. Hervey, and C. R. Sitter, instructors in English at Harvard College.

Most of the young men who apply for employment as reporters or editors are graduates of colleges or universities, and desperate chief editors have long torn their scurvy hair and wondered where and how these polished youths have learned to maltreat the poor old English language so diabolically. Now the secret is out. "Prep," school is the place.

This, at least, is the conclusion that one draws from reading the awful masses of words perpetrated by carefully tutored boys seeking admission at Harvard. A single official warning is published that "no candidate will be accepted in English whose work is seriously faulty in spelling, grammar, punctuation, or division into paragraphs." Yet the martyrdom of the language goes on. Some of the tortures inflicted upon it are more ingenious than any invented by the Grand Inquisitor.

Here are a few gems of thought from ambitious sub-freshmen: "One brother is an optimus and the other a pessimus." "There Shylack had come to get his forfeit of a pound of flesh in perfectly good faith, but got the raw end of the deal." "Shylack was so blinded to his thirst for revenge that he bit off his own nose."

Of course, it is a trifle exacting to expect high standing in English from busy young gentlemen whose energies are chiefly employed in running, jumping, swimming, rowing, field and track games, baseball, and football; yet one wonders how even they can invent such brainstern efforts as these:

"Macbeth, the villainous King of Scotland."

"The plot is the Comm in Vlee and Temptation trying to beat Chastity."

"Macbeth was an able general, and did not have any traits to kill any one."

"The tables are turned, Antonio having the Jew at his complete mercy."

"Gareth was the youngest son of King Lot and Queen Belladonna."

"I like Shakespeare very well, and have read most of his Waverley Novels."

Indeed! Wasn't it Bacon who wrote Sir Walter's stories? Here is rare news:

"Addison passed his early life in the place in which he was born. It was situated a little way from Harvard College on what was then called Tory's Row. He was educated by a private tutor, and, at the age of sixteen, entered Harvard College. He had no rooms at the College, but lived at his own home. The beauty of the country around his place afforded him many topics for his books."

"Addison was a student-loving boy."

"Now I was enthused by the pleasures I found in 'The Lady of the Lake,'"

"Imagine how severe a blow feels when your only amiability is abridged in a manner so Jewish was taken."

"I have read from several different authors, fictional and otherwise."

"The 'Antecent' was full of fresh ideas, and, in the main, little states of pleasant answers."

"Although his last points are showed up rather plainly, he has some good ones."

"His younger brother was kind of jealous of Godfrey's life."

"If any real good apology could be made for this first murder, all the others would fall in line."

"I got an outline of the story and saw the plot as big as a side of a house."

"Scott's poems appeal to me, because they are quite probable, good rhythm and sound plot."

"The Club served to make the acquaintanceship with one another, also to bring them together closely and to punish each other's faults."

"They are ahead of them a woman whom Lord Mordock says is crazy; that she wanders about through the forest; that it would be better for the neighborhood if she were killed."

"In spite of Johnson's rough, rude ways, and although he ate like a pig, he had many friends."

"Addison's first work was a poem in which he compared Wellington to the Guardian Angel, because of his role on the battle of Waterloo."

"Godfrey Cass was called away from a nice time where his loved Nancy was together with the doctor by Niles Marner, who had found Godfrey's daughter in his home instead of his gold."

What is the remedy for this chaotic condition? The authors of the pamphlet do not pretend to answer with finality. But whoever reads their report will agree that it would pay teachers to devote time and effort to such primitive studies as spelling and parsing and the rudiments of grammar, even at the expense of such luxuries as "language lessons" and other modish follies which are supposed to lead along the royal road to good English.

A Substitute

BEING very close-fisted, Mason had never allowed himself the costly habit of smoking. He always felt himself a loser when any one treated to cigars. But on one occasion, when the party he was with entered a stationery and cigar store, he made up his mind to have his share of the treat.

"Won't you have a smoke this time?" asked the dealer.

"No, thank you," replied Mason; "but if you don't mind, I believe I'll take a pencil."

Army War College Ready for Occupancy

IT LITTLE more than three years since President Roosevelt laid its corner-stone, the War College of the United States Army has been finished. General Mackenzie, Chief of Engineers, has notified the Secretary of War that the new building is ready for occupancy.

The War College is the most striking feature of a great military improvement scheme. It occupies a prominent site in the Washington Barracks reservation, overlooking the Potomac. To this college will come the picked men of the army, to receive instruction in the broader and more advanced problems of warfare. At one end of the building stands the statue of Frederick the Great, presented to the United States by Emperor William.

In architecture and in construction the War College is a remarkable creation. The cost was nearly \$700,000, and the entire work was done by day labor under the supervision of Major John S. Sewell, of the Engineer Corps. The building is in the form of a cross, with a dome at the intersection. The whole is after the Roman basilica style. Brick and Indiana limestone form the exterior walls, and the roof is dark slate. Unmistakably dignified characterizes the architectural design. In front and at each end is an entrance pavilion, noble above and massive piers and Ionic columns beneath. On the front, flanking the central pavilion, are pilasters several feet lower than the main columns.

Inside, on the main floor, is a lecture-room that will seat 225 men. The plan of the interior is very similar to that of many modern university buildings. The distinct feature is a central rotunda.

"The MASTER'S BEST"

Club Cocktails

The Best that Anyone can Serve

Thousands have discarded the idea of making their own cocktails—all will after giving the CLUB COCKTAILS a fair trial. Scientifically blended from the choicest old liquors and mellowed with age make them the perfect cocktails they are. The following label appears on every bottle.

Guaranteed under the National Pure Food and Drugs Act, approved June 30th, 1906. Serial No. 1707.

The Engine ready to be tested on its Treadmill

A MILE A MINUTE WITHOUT MOVING AN INCH

PUTTING A MODERN LOCOMOTIVE THROUGH ITS PACES ON A TREADMILL

IN the old days when an engine was built it was the custom to test her by sending her out on the road. Rudyard Kipling once wrote a story describing how a great locomotive was tried out. This was true at that time. It was usual then to take the engine, hitch a lot of heavy freight-cars to her, and send her out over the line, on levels and tangents, on curves and grades, until she showed exactly what was in her for those purposes. But nowadays the railroad men want to know more, and they want to know it before they entrust a scheduled passenger or freight train to her merces; so they put the engine on a treadmill. The first thing they do with her then is to allow her wheels to revolve to capacity, for in that the maximum speed is figured. Then she is coupled to an arrangement with a dial attachment, for the purpose of testing her pulling power. By a backward pull the engineer makes her draw the equivalent of everything from a baggage-car to a mile-long freight-train.

Now she is to all intents and purposes racing over the railroads, the track clear and the way straight; now she is striking the grade on the other side of a large town, and panting like a human being in distress. Stronger and stronger grows that backward pull until No. 0000 finds herself slowing up. After a time she is required to start or try to start again, with every known condition against her, every brake, bar, lock, and lever set wrong. This is to learn her starting power—a most important thing in railroading.

All the time the engine was pulling and hauling, racing and checking, her steam-gauges and water-gauges had been telling little stories of their own, and these stories were listened to with interest. They were telling about the pressure of the steam in the boiler, with the amount of water and coal used. They were saying whether the amount of fuel was producing the maximum of steam or whether there was a mistake somewhere. They were telling as plainly as the words will whether the boiler was large enough for the grate or the grate too large for the boiler.

Nowadays, with an engine on the treadmill, these skilled men can learn exactly what every part of the machine is doing, and see to the part that fails in its share. It means another trip to the construction department and the supplying of new parts.

Speed and pull and pressure and effectiveness of parts do not end the tests of No. 0000. Another important and interesting thing is determined while she is on the treadmill, and that is her best load. It is strange, but true, that engines for some reason are never exactly alike. They may be of the same type, parts made from the same pattern may go into them, and the same workmen may construct them on the same plan; but just the same, they differ. Old engineers will tell you of that, and therefore there must be a test for each engine.

Once the test was to hitch on cars to an engine "until the laid down and cried," as they said; that is, till she couldn't pull another car over the line marked out. Nowadays they never do that, but by a scientific arrangement of pulleys, levers and wheels, strike the golden mean between too much weight and too little—the exact point where the machine can do its best work, in the shortest time, under the most adverse conditions.

The principle is the same as in the case of a bod-carrier who overloads himself for a climb up a ladder, and is therefore wearied by a single trip, while the man who loads light makes many trips, with a minimum of effort, and therefore accomplishes more. The

modern railroad superintendent wants to get the most bricks over his division every day.

The proposition of putting a locomotive on a treadmill and running it at full speed just to find out what it can do is a little startling. The demands made upon locomotives to-day have materially changed the conditions of former years. Longer cars, heavier trains, higher speed, and longer runs are all factors which must be dealt with. Nothing short of the most accurate knowledge obtainable regarding every element of design and its effect on the operation of the machine as a whole meets the needs of the man who builds a locomotive.

There are certain qualities of a locomotive which can only be determined by actual trial in service; for instance, the starting power. Other qualities cannot be well determined when the machine is in service, because when running at high speed conditions cannot be kept uniform for a long enough period of time. If the test were started on a level straight track a curve or a hill would be reached before the running conditions had become sufficiently established to measure. The difficulty of conducting a test at high speed can hardly be appreciated. Some of the men making the test are often required to ride in a small box secured to the outside of the engine near the cowcatcher, where the noise, dust, and jar are frightful.

The testing-machine itself is nothing but a huge treadmill. The locomotive stands still when being tested, while its driving wheels are spinning around as fast as if it were pulling a train at full speed. The driving-wheels do not rest upon the tracks, but upon large, heavy wheels which can revolve and so allow the locomotive drivers to turn, without moving the locomotive either forward or backward. The coupler of the locomotive, which under operating conditions would be attached to the train, is secured to a mighty scale, especially arranged to weigh the pull exerted in drawing a train. It would seem easy work for a great locomotive, with its drivers resting on large steel wheels, to spin them around at almost any speed, but it is possible under these conditions to make it do as much work as if it were pulling a heavy freight-train up a hill. It is as easy to make the locomotive work in the testing plant as it is to make a horse or dog work on a treadmill.

With the apparatus as arranged it is possible to measure the speed at which the wheels are travelling in miles per hour, the pull exerted to haul the train, the pressure of steam in the boiler, the coal and water used, as well as other quantities necessary to make the test-record complete. Many of the measurements are automatically recorded as the test progresses, so that when it is finished its history is complete and ready for examination.

One of the most interesting things the test-plant determines is the best load for each different type of locomotive. It used to be the custom to make a freight-train as large as an engine could handle, on the theory that in this way it did the greatest amount of work. This method has been superseded, for it has been proved that an engine could actually do more if it were not so heavily loaded.

Trains are made up now on a basis which loads the locomotive to its capacity of greatest usefulness, considering the grades, curves, and weather. As a result there are fewer breakdowns, fewer delays due to trains being stalled, and better satisfaction all around.

The Bachelor's Script

By Reginald Wright Knoffman

LIFE'S little ironies generally wear petticoats.

Politics is a masculine game, but the first loss was a woman.

The woman who is no spring chicken will usually lay for you.

Love laughs at locksmiths, but the goldsmith is a serious matter.

The husband's day: eight hours for sleep, eight hours for work, and eight hours for explanations.

On the Rocks

DOYLE'S GOAT. "What kind of a hat is that you've just eaten?"

LUCILLE'S GOAT. "Parmaaaaaa!"

His Plea

JUDGE. "Prisoner, have you anything to say to the court before sentence is pronounced?"

PRISONER. "I beg the court to consider the youthfulness of my attorney."

A Loud Habit

A WELL-KNOWN comedian met a fellow actor the other day in Herald Square.

"Hello, Jack!" he said. "Anything to do this evening?"

"Nothing special," replied the other.

"Well, let's go up to the Hotel Astor and hear the newly rich eat soup."

How They Do It

FIRST LITTLE GIRL. "When you grow up are you going to advertise for a husband?"

SECOND LITTLE GIRL. "No; I'm going to be a widow. They don't have to."

The Automaid

"How many servants does Mrs. Randall keep?"

"None. She is one of those 'self-maid' women."

Both Out and In

THE NEEDY ONE. "I say, old man, could you lend me a dollar for a day or two?"

THE OTHER ONE. "My dear fellow, the dollar I lend is out at present, and I've several names down for it when it comes back."

Catalogue Price

"Do you think Dauber's picture worth catalogue price?"

"It's still a quarter, isn't it?"

Saving His Life

THE MAN IN. "Hey! I'm drowning. Jump in and pull me out!"

THE MAN ON THE PIER. "I can't swim."

THE MAN IN. "Well, jump in and let me stand on you, you blithering idiot!"

Often Enough

RICH ARMY. "You only visit me when you want money."

SPENDTHRIFT. "Well, I couldn't come much oftener, could I?"

THE INCOMPARABLE
WHITE

THE CAR FOR SERVICE

PERFECT SCORE IN THE HARRISBURG ENDURANCE RUN

In the Harrisburg Endurance Run, May 6th and 7th, the contestants were obliged to travel on the fastest schedule of any touring contest ever held in this country. In addition to the penalties inflicted for being late at controls, every adjustment or replacement was penalized, and observers were carried on each car. The second day's run was under such severe road and weather conditions that less than one-half of the 31 contestants even finished before the controls closed.

The Model "G," 30 horse-power White Steamer went through the run, as the Philadelphia Press expressed it, "Without a semblance of trouble." The Harrisburg Patriot remarked that, "Its run was as perfect as could be." The Philadelphia North American, speaking of the work of Walter C. White, who drove the car, said: "More than any other contestant, he lived up to the spirit as well as the strict letter of the rules."

The Cruise of the *Shining Light*

By NORMAN DUNCAN

Author of "Dr. Luke of the Labrador," etc.

NORMAN DUNCAN

EVERY now and then, as the years go, there is born a big book—a book everybody talks about in feeling words. Now, all unheralded, comes *The Cruise of the "Shining Light,"* by Norman Duncan, which, through its very force and simplicity, wins this universal chorus of praise from every state without one discordant note.

Hear what some of the reviewers say:

"Nicholas Top is a character that Dickens and Stevenson might have envied. He will take his place as one of the most likable 'damned rascals' in modern fiction."—*N. Y. Globe*.

"No modern novel has so gripped me in years. If readers of fiction have not lost a taste for 'style' in writing, poetry in description, and lifelike characterization, *The Cruise of the 'Shining Light'* should take rank at once as the finest novel of recent years."—Henry C. Shelley, Literary Editor, *Boston Herald*.

"Every page has character, and every stage of the love affair of Dannie Callaway and pretty little Judith is romance pure and simple."—*N. Y. World*.

"Those who are looking for novelty need look no further than *The Cruise of the 'Shining Light.'* One of the most thoroughly original romances. . . Both thrilling and satisfactory."—*Chicago Record-Herald*.

"Duncan's people have a way of winning you over."—*N. Y. Evening Sun*.

"A book of charm and sympathy."—*Albany Argus*.

Beauties of the Orient

You may have traveled through France, Italy and all Europe, to Cuba, Florida and California, and glorious trips they were—but have you seen

Japan and China?

With every rock and corner permeated with the mysticism of their centuries-old civilization—with their old customs, beautiful gardens, cities, shrines and temples, they offer an endless variety of unique attractions.

Your trip will be a delightful one if made on the mammoth Steamship "Minnesota" following the mild Japan Current from Seattle to the Orient. Illustrated folder descriptive of trip mailed on request. Address any representative of the GREAT NORTHERN RAILWAY, NORTHERN PACIFIC RAILWAY, or

Great Northern Steamship Co.

Sampson Rock of Wall Street

By EDWIN LEFÈVRE

Author of "Wall Street Stories," "The Golden Flood"

IN Wall Street Mr. Lefèvre has found all that goes to the making of the most exciting kind of astory of love and adventure. There are an American girl and American millions to be won, and the hero makes a daring fight for them.

Illustrated. Price, \$1.50

HARPER & BROTHERS, Publishers, NEW YORK

HARPER'S For JUNE

THE PLACE IN OUR EARTH DISCOVERED FROM WHICH THE MOON WAS TORN

An intensely interesting article by Prof. PICKERING, of Harvard, who shows that the moon was once a part of our earth and was cast off into space from a point somewhere in the Pacific when the crust of the earth was cooling. His article is illustrated with many interesting photographs and diagrams.

EDWIN A. ABBEY'S SHAKESPEARE PAINTINGS

Mr. ABBEY has painted for HARPER'S MAGAZINE five remarkable pictures illustrating scenes in Shakespeare's "Henry IV." One of them, a picture of Falstaff, is reproduced in full color as a frontispiece of the June number.

LINCOLN AS I KNEW HIM

Col. Wm. H. CAHOON was President Lincoln's personal body-guard—and his friend as well. He was constantly with the President, and in these recollections he adds much new and valuable material to our knowledge of Lincoln the man, his habits, his humor, his opinions, his personal bravery, etc. He tells, among other things, of the attempt of a man, probably Surratt, to murder the President while he was at City Point with Grant.

AN ARTIST'S ADVENTURES IN TRIPOLI

Mr. CHARLES WALLINGTON PURGATOR, who likes to travel in places where other people do not go, writes of the romantic city of Tripoli and of the many interesting happenings during his stay there. He has made a number of striking paintings for his article, one of which is reproduced in color.

VIGNETTES OF THE ROAD

A series of graphic and striking paintings by Thornton Oakley picturing varied phases of life on the railroad, accompanied by a picturesque article descriptive of the romantic side of life of the workers on the road—the signal man, the engineer, etc., etc.

MR. HOWELLS AT DONCASTER AND DURHAM

Another of Mr. W. D. HOWELLS's delightful sketches of travel among the English towns, with charming drawings in tint by Ernest Haskell.

8 SHORT STORIES

In the selection of stories for any number of HARPER'S MAGAZINE the editors have always these things in mind: The stories must be, first of all, interesting; they must be well done—the best work of the great writers and the best work of new writers—and they must be of no one type, but of all types that are worthy. The stories are critically selected from thousands submitted to the magazine. They are the best published.

Look at the stories in the June number. "In the Garden of the King" is a poetic romance by AMELIE RIVER, a tale of kings and queens and noble knights. "Old Lash Bales' Escape" is an amusing story of an old man who, having worked hard all his life, finally relaxes and runs away. It is by MURIEL CAMPBELL DYAL, whose stories rank with the best. "The Intruder," by GEORGINA WOOD PARSONS, is a tale of a most unusual sort, a story in which a strong man and a strong love conquer where everything else has failed. Roy NUTCOM's "The Crown Painters" is a story of the real West—a story tinged with the affection of an old man for a little broken-down donkey. "Backwoods," by GAUCE ELLERY CHASTIN, is a subtle story of a woman who thought love less important than other things; and "A Failure," by JENNETTE LEE, is a striking study of married life with a most happy conclusion.

The child story of the number is by ANNIE HAMILTON DONNELL, who wrote "Rebecca Mary." It is called "The Step One," and is a touchingly real story of a very sad child. Another humorous story is "The Peripatetic Pappy," by S. T. STEER, a story of a man who tried to find a substitute for a dog he had lost and what came of it.

COMMENT

The Public Utilities Bill

THE Public Utilities bill, which was passed so quickly by both parties of the New York State Assembly, illustrates most emphatically the need of an opposition party. No matter what else may be said of this measure, it is one of the most radical pieces of legislation that have ever been passed through any English-speaking law-making body. It proposes that the State shall deal with capital in such manner that the money of investors is, in some forms and for some purposes, as much within the power of the State as if the State really owned it. Power of sequestration, penalties of forfeiture, obligations that have heretofore been unheard of, changes in the law of evidence, denials to individuals who incorporate of rights that have heretofore appeared unassailable—a measure involving all these has been passed without serious discussion. Outside of the Legislature there has been no debate. Before legislators counsel have made arguments, but not only has little or no effect been produced, but no effect was expected by those who ought to have deliberated. Speaker WANDERMAN is reported to have made a speech which illustrates the character of nearly all our legislative bodies. Having stated reasons against the measure, he said that they would all vote for it, nevertheless. Without discussing the merits of this measure, admitting, for the sake of the argument, that the chances are in its favor, it is too important a bill to be enacted under orders or under fear of a public sentiment to call which uninformed would be to employ a description at least mild. If legislatures have no more courage and independence than to legislate by command or through fear of public sentiment, it is high time to elect some real men to make laws, or to revert to the law-making practices of the fourteenth century, when the humble Commons used to petition the king to make laws to cure stated ills, the king responding or not replying as he saw fit. There are many modern instances of executives who manage their legislatures as completely as the Saxon king ordered about his Witan. It is time for the reappearance of debate in our legislative halls, and to that end a real opposition party is needed.

Democratic Candidates

Some Democrats are continuing to talk of GEORGE GRAY, of Delaware, and some of Governor JENNISON, of Minnesota, as the proper man to nominate for President in 1908. Without uttering a word of criticism concerning either of these gentlemen, we may suggest the wisdom of nominating some candidate who has had no part in any conflict which hitherto has divided the party into factions. Even if intraparty conflicts of the past have been settled, and are being covered by kindly nature with the moss of oblivion, that kind of moss is most easily torn away. A man may be brought to consent to the naming of an old enemy in the silver fight, for instance, but after the campaign opens some careless word may cause

him to reexamine the scars of the earlier conflict; the conclusion of that examination may be extremely bad for the cause. If the Democrats desire a candidate who will be exactly the opposite of the Republican candidate, who will unite the party on issues of the day, a man whose name will not suggest past internecine controversies or past defeats, they may, indeed, nominate GEORGE GRAY or Governor JENNISON, but it is clear to all men that they will surely attain their end if they nominate WISDOM WILSON.

Senator Foraker's Attitude

SENATOR FORAKER is determined that he will not submit to dictation. He seems to think that the Republican people of the State of Ohio alone can settle the question, if there be a question, between himself and the administration, whether the administration be represented by Mr. ROOSEVELT or by Mr. TAFT. Mr. FORAKER, in his day, has been accounted somewhat of a boss in Ohio politics, working his machine rather easily through Senator DWIN, who held the throttle. The State officers, Republicans, of course, and State-Committee-Chairman BROWN have declared in favor of Mr. TAFT, and Mr. BROWN has uttered some pituitary remarks to the effect that Mr. FORAKER will be denied the Senatorship if he does not conform to the plan of giving the Ohio delegation in the convention of 1908 to the Secretary of War. Mr. FORAKER has doubtless a difficult contest before him, and he is wise in postponing the real struggle for a year. He knows that Mr. TAFT's strength in Ohio depends upon Mr. ROOSEVELT's retention of his own popularity; moreover, that the choice of the office-seeking and patronage-dividing politicians to-day be one thing, or one man, and another thing and another man to-morrow. In a word, Mr. FORAKER has come to the conclusion that this year is a better one for ROOSEVELT candidates and ROOSEVELT policies than next year may be. In the mean time he is saying the right thing about machines and bosses and the habit of dictation, a subject upon which, as we know now better than at any other period of our history, men's views vary as times and seasons and events and circumstances vary.

Strikes and the Public

ONE of the evidences of our imperfect civilization has been the strike of longshoremen in New York city. The immediate cause of the strike is not of as much importance to the State as is the fact that the travelling public—importers of this country and exporters of foreign countries—have not only been inconvenienced, but have suffered serious loss by the disturbance of business due to the embolism of employers and employed over a private matter concerning their own relations with each other. Every one will admit that the law should prevent the evil results to the innocent third party, but no effective legal solution of the perplexing problem has been worked out by those to whom we intrust the making and the execution of law. As often as the experiment has been tried, the government has not succeeded in accomplishing any but temporary good by bringing about compromises between the principal parties. We seem to forget that there is law enough, if enforced, to protect all who are willing to work; but as to that, and as to need of more law to fix responsibility, we are confronted with the sad fact that those who are working our various governments are thinking more of "how many votes there are in it" than of how to do justice and bring about the peaceful reign of law over all classes, rich as well as poor, and employed as well as employer.

An Archaic Body

THE Louisville Board of Trade seemingly thinks that it is dwelling in another and a much different age. At a recent meeting there was a discussion by its members of the need of the State of Kentucky for more railroads, and yet Kentucky is a State that one would think, from its legislation, had a sufficiency of railroads. The Board of Trade thought that the counties and cities of the State would do well to offer pecuniary inducements to railroads to invade their territory and to commit further crimes against shippers, in lieu of taxes, which were to be remitted, for a time at least. The prevailing fashion in recent times, in Kentucky as elsewhere, has been different. The Louisville Board of Trade is going back to an earlier time when towns used to bond themselves, under the authority of the State law, in aid of railroads. Just now the State legislatures are travelling in quite another

direction. Railroads that used to be supposed to benefit the country are the objects of assault by the lawmakers, and during the past winter, acting under Federal influence, the States have been so violent as to suggest the suspicion that their politicians are playing an astute game, and are endeavoring to drive the railroads to petition the Federal government to take them under its control. It may be, however, that the Louisville Board of Trade is really speaking the mind of the people of the State, and that the politicians are frightened and seeking cover.

Railroad Men of the New School

MR. FINLEY, of the Southern Railroad, is making some good speeches. He is an excellent specimen of the new school of thoughtful railroad men, whose counsel ought to be heeded by all who are engaged in the task of making the new legislation in which so many minds are busily engaged. His recent remark that, in order to serve the public of his railroad, he consults their convenience, profit, and all their interests which are affected by his road, is an indication not only of his philosophy, but of the philosophy of most of the modern railroad men. The old "public-be-damned" day is long since passed. The natural progression of the relations between railroads and the communities they serve is about as follows: first, the railroads were hailed as the promoters, if not the creators, of prosperity; towns traced themselves, counties contributed, and many inducements were held out to secure their entering into the country; then it began to be believed that the managers of the roads were exploiting the country for their own profit, without regard to the good of the country through which the roads ran; this led to the doing of wrong by the roads, which was met by resentment on the part of the people; finally, the managers of the roads, learning wisdom from experience, realized that their real profit lay in consulting the welfare and in helping the prosperity of the people whom they served. This is a perfectly natural development of an economic law. The main difficulty at present is that legislators who are unwise enough to believe that statutes may change and improve the law of nature have not yet learned that the railroad managers are now governed by an economic law the free operation of which will benefit both the roads and the communities. In the end the economic law will prevail, but in the mean time the politicians will do their best to prevent its working out.

Binding Tighter

All our lives we have heard the pleasant story that at this or that dinner, wet or dry, good, bad, or indifferent, the ties between our country and some other country have been bound tighter. Just now the prandial promoter of good fellowship is busy tightening the bonds between this country and Japan. A little while ago the bond that called forth most eating and drinking was that between this country and Great Britain. In the present case, if we did not know better, we would be at liberty to suspect that the tie seemed so much in need of attention that it must have been pretty nearly wholly untied by the San Francisco School Board incident. The dinner to KIMURA in New York was the last serious bit of tightening; but notwithstanding it, and the assurances made at it by Admiral DREW and Secretary STANLEY, and KIMURA himself, it is certain that, for the moment at least, there is no real need of tightening. What may happen in the future depends not on dinners, but on the respective interests of the two nations. The way to keep peace with other nations is to treat them fairly. In international affairs justice is better than libations of wine. Judging from the speech made by the Emperor's representative at the Periodical Publishers' dinner at Albany, the other day, the feeling in Japan over the news of the now almost-forgotten action of the San Francisco School Board was one of the keenest sorrow and astonishment. The Japanese, he said, had been taught in their schools, and had imbibed from every side, the idea that the United States was the mother that had awakened them from their long slumber, and was it possible that the mother would thus insult and injure the grateful children? This is corroborative of much that we heard from Japan at the time of this most unfortunate incident. As the speaker said, the Japanese now know that the mother would do nothing of the sort. With the kind assistance of the Pacific coast it will be very easy, under these conditions, to maintain the peace.

Canada and Reciprocity

There are some commentators who believe that Canada does not desire reciprocity with this country, because Mr. LAURENCE's government does not appear to be overfriendly to us. Mr. LAURENCE himself, in a recent speech made in the presence of Mr. BRYCE, said that Canada was no longer thinking of reciprocity, and now his postal authorities are shutting out from the Dominion American newspapers unless they are prepaid and stamped. The Canadian newspapers do not like the application of a like arrangement which follows the refusal of the Dominion government to renew the old arrangement. There is, however, no reason to believe that because of this Canada would not like a real reciprocity with this country. These outbursts of ill-temper on her part are but manifestations of a natural resentment at our many refusals to treat with her on the theory that the shackles should be removed from the trade between the two countries. Every one who is familiar with the sentiment of the Canadian producer and merchant, excepting the manufacturers, knows the size of the grain of salt with which these chaffings of wrath must be taken.

The Duma Still Survives

On May 21 Premier STOLYEVIN called upon the Duma to record by vote its abhorrence of the revolutionary terrorism exemplified in the lately discovered plot to assassinate the Czar. As notice of his forthcoming demand had been given on the preceding day (Sunday), the Social Revolutionists, the Social Democrats, and a part of the so-called Group of Toil were careful not to be present when the Chamber met on Monday; and, consequently, the resolution demanded was passed by a unanimous vote. The incident proves that not only the Constitutional Democrats, Octobrists, and Moderates, who occupy the centre and right centre, but also the factions that sit on the left of the Chamber, are all, though not for the same reasons, desirous of keeping the second Duma alive as long as possible. The Reactionists, who sit on the extreme right, constitute the only party that wishes a speedy dissolution of the popular assembly; indeed, in its recent convention at Moscow, it addressed a petition to that effect to the Czar. It is obvious that with every week of the Duma's existence the more familiar with the methods of representative government the Russian people will become. That is why the Constitutional Democrats, who alone seem to take a statesmanlike view of the situation, are trying by compromise and conciliation to avoid a collision with the STOLYEVIN ministry. On the other side, Premier STOLYEVIN, who, although the revolutionists are said to have doomed him to death, seems to fair-minded onlookers a genuine patriot, appears almost equally anxious to continue the parliamentary experiment as long as possible. In spite of the assurances of the Minister of Finance that Russia is now self-supporting, the Premier knows that the figures of the budget for the next fiscal year are untrustworthy, and that the St. Petersburg government will need at no distant day to procure another foreign loan. Probably in Paris, and certainly in London or New York, such a loan would be unobtainable were it known that the Czar's intention, made known on October 30, 1905, to give his subjects representative institutions had been definitely renounced. Premier STOLYEVIN is undoubtedly right in assuming that if the Duma can be kept in existence five or six months Russia's credit on the exchanges of western Europe and the United States will be materially strengthened. That is the key to the mysteries of the Russian situation.

French Priests Who Would Abolish Calvary

A Paris despatch to the *San* gives the Parisian journal *Gil Blas* as authority for the assertion that three thousand French priests and curates have petitioned the Pope to permit the priests of the Roman Catholic Church to marry. *Gil Blas* itself strongly advocates the granting of the petition, and though, as an anticlerical paper, its influence with the Holy Father can hardly be great, its views, and the arguments with which it backs the petition, are of lively interest. Catholic bishops, it asserts, are being petitioned on this subject all over the world. As to the petition of the three thousand which it quotes from, it says the signers all are priests past the marrying age, who speak out of the fulness of experience. These petitioning priests declare, it says, that nineteen-twentieths of the French clergy and ninety-nine hun-

droit of the French laymen desire the abolition of celibacy. If that is true, compulsory clerical celibacy is out of date in France. *Gil Blas* declares that the abolition of it is essential to the renewal of Catholic life in France and to the preservation of religion and of the Church of France.

A Rule With Deep-down Roots

How serious that movement is in France, or how much credit is to be given to the statements of *Gil Blas*, we cannot tell, but the subject is one of great interest and importance, and upon which the minds of thoughtful persons are well used to dwell. Celibacy has for so many centuries been enjoined upon the Catholic clergy that it has come to be regarded as one of the fundamental and essential fixtures of that Church. Nevertheless, it is not a doctrine of religion, but merely a rule of discipline or policy, and it lies within the discretion of the authorities of the Church to abolish it. Its beginnings in the Christian priesthood date from the fourth century, but it has often since then occurred to the councils of the Roman Church. The Reformation brought it under discussion at the Council of Trent, in 1562, when it was retained in spite of the efforts of a strong party which included the Emperor, the King of France, and many of the electors and princes. Since then it has ruled unshaken in the Roman Catholic priesthood, though the Pope may grant permission to a priest to retire from the priesthood and marry. Some years ago it was reported that certain priests in South America had been permitted to marry, or were living in a quasi-married state, undisturbed by their superiors, and much discussion ensued about them. More than any other one thing, the celibacy of its clergy makes for strength in the organization of the Roman Catholic Church. People who argue that the abolition of celibacy is necessary to preserve religion, and the Church, in France doubtless consider that the Church of France and the cause of religion in that country would both be better off if the ecclesiastical organization were not so strong as it is, and therefore not so much feared as a powerful working machine with separate interests of its own, and policies to advance them.

Impoverished Oxford

LORD CROMBIE, Chancellor of the University of Oxford, has made an appeal on her behalf for \$1,250,000. Oxford is poor, and so is Cambridge, but Oxford is the poorer of the two. Oxford is so poor that without more income she must remain the teacher of the humanities and mathematics, as she has been, while even so she cannot do the familiar tasks as well as they used to be done. As to the new studies, especially the studies in science, her income is not large enough yet to permit her to undertake them. Lord Crombie says that a good deal more than \$1,250,000 is needed, but this amount represents an absolute and immediate need. The first response to the request is made by Mr. Astor—the London Astor—who gives \$50,000. It is a wonderful comment on the indifference of Englishmen that they have taken for so many centuries all that their universities have to give without making due pecuniary offering to relieve their needs. It is so different here, where the gifts to teaching come both from those who have been taught and those who wish that they had had the opportunity to be taught. Giving to education in this country has not been always wise, but it is growing wiser, while it has hardly begun in England. To name Oxford is to recall one of the most precious centres of light and learning, and of liberty, that men have ever possessed. And that this leader of religion and of thought, this inspiring maintainer of intellectual freedom, should be begging for the power that will keep her clad in the garments of the day speaks ill for the reverence and the thoughtfulness of the many rich among her army of living scholars.

Secretary Root at New Haven

On May 13, at Yale College, Secretary Root delivered the first of four lectures on the responsibilities of citizenship. It is very doubtful, he said, whether the higher academic education contributes much to capacity for political usefulness. As a rule, he thought, political wisdom in the best sense comes in life and not in study, and the tendency of highly educated men to neglect all political duties is unfortunately too general. The weight of his discourse was

directed to giving emphasis to the truth that it is a universal duty of citizenship to take part in government. That, he said, is a matter of peremptory obligation which cannot be avoided by any intelligent man who has any understanding of the conditions under which he lives. Mr. Root's own record qualifies him to speak such words as these with the better grace and the wider influence because he has so signally lived up to the standard they define. He is a wonderful public servant, diligent, able, patient, and resourceful, and useful to an extent that is very inadequately appreciated. Out of a dozen intelligent men gathered haphazard, ten are likely to agree that he is the fittest Republican of all to be President next time. But that he ever will be President few people believe, because he had other clients before he took the reins of the people of the United States.

Hopeful Signs in New York

In the third of his Yale lectures, delivered on May 20, Mr. Root, in telling about the mischiefs that result from the domination of political organizations which subsist by office-holding, used as his illustration the story of TAMMANY, and what was accomplished by taking the New York Street-Cleaning Bureau out of politics, and of the gradual demoralization of the street-cleaning service when it began once more to be used to help the ruling party. The Secretary might have found a brand-new and very amusing example of the conflict between working for a political organization and working for the public in the existing rumpus in the office of Borough-President AHEARN. There seems to be no fault to find with Mr. AHEARN or his lieutenants except that, being put into office by Tammany, they have administered their offices for the benefit of Tammany instead of for the benefit of the people of the city. There is nothing out of common about that. The interesting and unusual thing about the recent situation is that the mere sight of a cityful of disintegrating pavements and the mere sound of the howls of indignant citizens, combined with a prospect of prompt removal from office by the Governor, should have stirred Mr. AHEARN to take real measures of reform. No doubt the prospect of removal was the strongest reformatory influence, but if the visible consequences of bad work between elections are going to scare the city officials responsible for them out of fidelity to the organization into fidelity to the taxpayers, we may be coming to better municipal conditions.

Federal Government Has Improved

In the last of his four lectures, delivered on May 21, Mr. Root gave some reasons for believing that the moral sense of our nation had greatly improved and is still improving. He recalled out of history some items of our national discredit, "the shameful breach of the terms of BURGOYNE's surrender," the refusal of the States to give effect to the provisions of the treaty of peace with England for the protection of the loyalists, the distresses of Valley Forge, due to administrative incapacity, the humiliations of 1812, the Credit Mobilier scandals, and the BELKNAP scandal and the whiskey scandals of GRANT's time. Such things could not happen now, said Mr. Root. "The whole system of the Federal government has been lifted up to a higher plane of cleaner moral vision." Undoubtedly it has been raised. Yet not every reader will respond with entire confidence to Mr. Root's assertion that "It would not be possible now to elect such a man as AMOS BEAR Vice-President of the United States, or to leave in command of the army a man like WILKINSON." Some pretty queer people can still at times get a great many votes for high office in this country, and scare us into tremors of fear of what the voters may some day do in a Presidential election. But so far the majority of voters have seemed to know what they were about, as witness what the papers now report about the collapse of the HEARST-CUNNINGHAM coalition.

What a Molluscoidle Is, Maybe

This paper tried last week to help a correspondent to an understanding of the significance of the word "molluscoidle," recently popularized by the President. We gave the Century Dictionary's definition. Perhaps a more vivid conception of the idea sought to be conveyed by the President's word will be imparted if we define a molluscoidle, in language once attributed to an Assistant Secretary of the Navy, as a person with a chocolate-clear backbone.

The Economic Future of the South

THE most interesting incident of the week ending May 18 was the convention held in Philadelphia by the American Cotton-manufacturers' Association. Speeches were made by Vice-President FAIRBANKS and by many other men of national reputation. Among conspicuous representatives of the Southern States may be mentioned Mr. R. B. TAYLOR, of North Carolina; Mr. C. H. HASTAY and Mr. H. V. COOPER, of the same State; Mr. T. P. BENNETT and Mr. ELLISON A. SMITH, of South Carolina; Mr. C. CHAPPELLE, of Georgia; Mr. N. M. McALL, of Alabama; Mr. W. M. FINLEY, President of the Southern Railway; and Congressman BULLOCK, of Austin, Texas. The address which attracted most attention, however, was delivered by ex-Senator McLAUGHLIN, of South Carolina, because it was accepted as an authoritative forecast of the immense industrial development to which the Southern States may look forward during the next half-century, a forecast based not on hopes and dreams, but on statistical facts and legitimate deductions from them.

Mr. McLAUGHLIN began by pointing out that the South no longer depends entirely upon its cotton crop for its source of revenue. Even at the date of the last census the former slave States contributed some \$30,000,000 pounds to the total tobacco crop of the United States, compared at \$26,000,000 pounds. The single State of Louisiana yielded in 1892-3 about 300,000 bbls. of cane sugar, or nearly three times as much as all the British West Indies. The timber of the South has increased enormously in value within the past five years, and by the returns from this source of income alone many a planter has been rendered independent. In many sections formerly devoted exclusively to cotton, tobacco and timber now yield a revenue which has enabled the cultivator to tide over the spring and summer months. This, although the institution of slavery and the old systems of big plantations managed by overseers have almost wholly passed away, while the cost of labor and fertilizers has significantly increased. The Southern planter now has to deal with a generation of working-men whose sole idea seems to be to get the highest wages they can and furnish the smallest possible equivalent in labor. While taking into consideration, however, the general advance of prices in all lines of agrarian industry, Mr. McLAUGHLIN thinks it an exaggeration to say that today cotton is the cheapest standard product in the United States, and that the price of the raw staple, under legitimate economic conditions, should range from ten to twelve cents per pound. He maintains that at this price cotton should be the cheapest of all materials in the world. At the same time the ex-Senator from South Carolina pointed out that the Southern States had scarcely more than begun to reap the profit from their cotton crops which ultimately will be theirs. What they need for the full fruition of their opportunities is to manufacture their cotton in mills located near the cotton-fields, and to send, and the raw material, but the finished manufactured article abroad. He predicted that such a consummation is much less distant than is generally supposed; for this, among several reasons, that the electrical-power development now in progress in the South will, when completed, yield motor force enough to run every spindle from Virginia to Texas. Mr. McLAUGHLIN prophesies that when the mills shall have come to the cotton, as he believes they will have come within the next half-century, the South will enjoy as complete a monopoly in the manufacture of cotton fabrics as she now possesses in the production of raw cotton. Then, instead of ten cents, the Southern States will draw from the remainder of the world thirty, forty, and fifty cents per pound for the finished product, thus making the seeds of the rapid rich beyond the wildest dreams of the present inhabitants.

It is, of course, inadvisable not only that the mills should come to the cotton, in order to eliminate the cost of transporting the raw material to the seaboard, and thence across the Atlantic, but also that such improvements shall have been made by Southern cotton-mills in the processes of manufacture that their finished products can compete with the finest fabrics of Great Britain and Germany. At present our domestic output of cotton goods consists mainly of the coarsest and cheapest cloths, which are bulky in proportion to value, and the chief cost of which is derived from the material, and not from the labor and skill bestowed upon it. We cannot hope to excel Great Britain in the manufacture of the finest fabrics until we surpass, instead of lagging behind, that country in the invention of labor-saving machinery, and in the devising of methods of securing the best results from the smallest outlay of energy. Our cotton manufactures must also see to it that they equal, if they do not surpass, their German rivals in the preparation and successful application of delicate and lasting dyes to cotton goods. There are foreign markets of vast and continually expanding proportions to which, as yet, we have little or no access, except as regards the coarsest and cheapest kinds of manufactured cottons. When we consider how great a quantity of the crudest manufactured products we are able to dispose of in Manchuria and some portions of China, we may judge what it might mean for Southern cotton manufactures if, by the quality and price of the products of their

highest skill, they were able to undersell Great Britain and Germany as purveyors of the finer grades of cotton fabrics to the 400,000,000 denizens of China, and to the 300,000,000 inhabitants of India. It is not generally known that India, though operating 6,000,000 spindles of her own, imports more cotton goods than China, to which it takes from foreign manufacturers we participate at present to the extent of less than one-half of one per cent. There is no doubt that the Southern States possess in their broad belt of cotton-growing soil a means not only of supplying the national demand for cotton fabrics, but also of furnishing a surplus of finished products for foreign consumers, such as no other nation has now or can acquire. Those States have an almost unlimited water-supply, great deposits of coal within easy reach, and of the iron of which machinery is made. All that our Southern manufacturers require is to vie with their foreign competitors in respect of energy and skill. That they will not long fall short of their rivals in these particulars Mr. McLAUGHLIN is convinced. Hence the confidence with which he declares that there is no margin for decadence in his forecast of the future of the South. Thence, he told his Southern audience, is the real "promised land," the country favored by God and Nature with a monopoly of the only great agricultural product used everywhere by civilized man.

How to Choose Novels

It is the somewhat arid contention of a contemporary reader that the new best way to choose novels is to choose any at all; and the second-best way is never to read the novels of living authors. By this method one foregoes Mr. HAZARD and Mr. MONTAGNE, which he admits is a dreadful loss; but he insists that one escapes so much that is tawdry and vacant along with them that it seems worth-while. But if, for any reason, one feels obliged to read novels, he would have him first read the reviews, rarely avoid all those that receive laudatory notices, the best advice, of course, being always beneath the notice of real readers, and choose those that receive scant and derogatory reviews. He maintains that it is an exhilarating revelation to find how much really good stuff may be unearthed by this method, systematically carried out.

There is an insult humanity, as a whole, resents quite so much as a new idea, or even an old idea in an unfamiliar dress. If we were not so accustomed to hearing it quoted from *Hamlet*, and so accustomed, too, to taking all *Hamlet's* sayings for granted as having received the seal of the world's approval, we should resent the saying that there are more things in the world than are dreamed of in our philosophy. What we enjoy thinking is, as a rule, that we know all there is, have measured all the forces, and that the next step is easy and assured. Now these novels that are dismissed with a *smack* often have either a new idea or an old and worthy one in a new dress, or a rarefied atmosphere, or a popular philosophy in it.

A novel not so recent as it ought to be to be written about, but of singular merit, was recently unearthed by this method of looking up the disparaged tale. It was dismissed with a sentence by an established critic, who said that it was a great pity that the wit and skill of the author, familiarly known to us as the Duke of Devonshire, should have been submerged in a weak and painful mysticism. Dodo was, indeed, a very scathing, brilliant, and witty bit of social analysis. The Lord Archbishop's son, too, was very skillful in his management of dubious and candid aristocratic ladies and lords. Even those unaccustomed to consulting daily on easy terms with the English aristocracy, accessible as it is to-day, believed in his grand feud, and echoed the verdict of the foreign boarding-house keeper, who, conceding some special privilege to a literary man of repute, added afterwards to his wife, "Poor, common, low-down boarding-house keeper that I am, when I see it I know what it is." With so much to the good of the Duke of Devonshire in mind, it was natural to see how he would deal with weak and painful mysticism, and as usual the *smack* designated a book of unusual vitality and content. The weakness was a spiritual triumph. Although there was marrying in the book, it was not a final event of the "then they were happy" order. Indeed, the hero did not marry at all. He was known among all his friends as the person who had gotten so much joy out of living that every one in a difficulty turned to him. He was a man who had gone into the country to think, while most of those who go to cities do so to escape thought. He lived apparently with the visible, the tangible, expression of God in nature; not as it is worn and distorted by the disease of self-conscious separation in man, but as it exists in nature; and his isolation from men he chose not in a spirit of bitterness or idleness, but as a preparatory step to the final resting off of what is merely casual and temporal in a human being, that he may the more lightly step into the larger consciousness which has hitherto and created the self.

"I have pursued," says this hero, "the joys of living, not bently, sensual joys, for never have I had part in them, but the

clean, vital joy of living. And you tell me that there are vital pains of living, as clean and as essential as those joys. Well, let them come! I am ready . . . the huge body of pain and sorrow may come and lay on my chest like a nightmare. . . . If that is to be, if that is essential, I give it the same welcome as I have ever given to joy. It may frighten me not of existence, because the body is a poor sort of thing, and an ounce of lead or so will kill it. But whatever can happen cannot hurt me, this me. Do you tell me that a rifle-bullet or a hangman's noose can kill me? And can a frightful revelation of all the sorrow and its pain and its terror, and the prying of one creature on another, touch my belief that life is triumphant, and that joy is triumphant, and that joy is triumphant over pain?"

Now this, which is the hero's verdict upon life, is neither weak nor painful, nor is it new. It is a doctrine as old as PLATO's dialogues, and if only folk would read those often enough there would be no great necessity for the multiplication of modern novels. It is true that in *The Angel of Pain* an artist loses his eyesight, one man misses marrying the wife he had chosen, and the hero, who certainly lives and speaks KENNEDY CARPENTER'S philosophy, whether he be drawn from him or not, dies finally a painful and mysterious death. But in every case pain is but a means to fuller consciousness and higher virtue, and so loses its sting and becomes an angel of life.

Two more novels of real worth and contrast—*The Secretion Recently* and *The Far Horizon*—the one lyrical, rapturous, after the wind, and the other gray and quiet as a long northern twilight, were found by the same method of looking out the despaired and rejected.

One critic has denigrated that the hero of *The Far Horizon* was a bore and a prig. A man who could know intimately a beautiful and impulsive actress of questionable reputation and yet feel no impulse to hold any relation to her other than one on a highly exalted and spiritual plane, we are told, is an impossibility, and, if true, then the man is a bore and a prig. That is one view of life and one kind of knowledge of life. But there are many and many knowledges of life, and *The Far Horizon* is one and, to some folk, the more acceptable kind. "He that hath ears to hear" once again shall hear.

Senator Daniel

Virginia's Probable Candidate

(From the *Lynchburg News*)

VIRGINIA citizens can only contemplate with pleasure and satisfaction the favorable allusions so frequently made to their senior Senator in connection with the leadership of the national Democratic ticket for the 1908 campaign. Not only from all over the South, but from various parts of the North and West also, have proceeded handsome eulogiums of Senator DANIEL, together with earnest insistence that he would admirably fill the requirements of Presidential station.

The fact that this distinguished Virginia citizen occupies so large and so enviable a place in the national view brings the reminder that the result has not been brought about by any mere temporary breeze of happy political chance or good fortune. Senator DANIEL has earned the nation's esteem, confidence, and admiration. Pushing his way through the crowded paths of mere mediocrity in public life, he has taken the commanding position he now occupies by dint solely of his own innate worth and work and faithfulness to the demands of his high calling. He has risen to the heights because he deserves to rise. His name is honored throughout the land because it stands for immaculate integrity in public life combined with the genius of statesmanship and a lofty sense of conservation to duty, as one sees it through the eye of conscience and courage and exalted conservatism. His gifts of brilliant eloquence have not won him his present distinction. Doubtless they have proved helpful in an incidental fashion towards that end, but the fame of DANIEL the orator is to-day completely overshadowed by the prominence of DANIEL the accomplished, far-seeing, clear-sighted, and profoundly able statesman.

As attention has been turned Southward, therefore, in speculating upon the advisability of choosing a Democratic Presidential candidate, it ought to be an cause for wonder that DANIEL looms up as the one Southern man best suited and most available to take up the national leadership of his party. The fact, we repeat, is especially pleasing to his constituency throughout the State, and a source of inexpressible local pride and gratification to the people of his home city.

Personal and Pertinent

THE recent gift of \$1000 for the Firemen's Relief Fund by the Birmingham Typewriter Company followed a bad fire in the company's premises on Broadway, and was accompanied by a letter in which the company's vice-president, Mr. M. HARRIS, said that he had never before realized what the New York firemen had become so famous. To see the New York firemen at work in a bad fire in

one's own premises is an effective way to learn appreciation of their qualities, but we all know roughly what their merits are, and are reminded of them often enough by the fire stories in the newspapers to keep our impressions fresh. HARPER & BROTHERS have in preparation a book about the New York firemen which tells all about them, and how they live, and what they do. An interesting book it cannot help but be.

Why is it that they all call him "BULL," and that all the Yale men of his time, even those whose political and economic principles are usually correct and dominant, expect to vote for him if he shall be nominated? One day when he was holding court in Cincinnati, a Yale man of his time entered for the purpose of feasting his eyes on his Bigness, and to see how he did it. But the judge saw him too, and almost at once adjourned court for the day. An officer of the court was sent to invite the disappointed Yale man into the judge's room, where the disappointment was cleared away by the characteristic remark: "I'm glad to see you, Jim; I've adjourned court. I can't waste the day holding court when I can spend it with you." Perhaps some who read this will say that they don't wonder why Yale men, etc., etc., etc., while others may remark upon the baseness of Yale's political principles. Where, again, may say it is not a true story, and very likely it isn't.

Congressman BERTON, of Cleveland, who is led to believe that he ought to be the successor of Mr. FORAKER as Senator from Ohio, is a very long and a very amiable gentleman, a man of large intelligence, and a friend of the HARBESIDE boys, as they are still called in the northern part of the State of Ohio and at Williams College—a type of the highly respectable gentlemen who always go so well with blue broadcloth frock coats and boots. Mr. BERTON is a strong speaker and a sound thinker, and he usually wants the right thing even if he does give huge piles of the public money for their river and harbor improvements at which we used to spend so much, and concerning which we now say so little. Mr. BERTON has lent to the bills the weight of his own responsibility. He never belonged to the PLANK machine; he is an anti-imperialist; he is not much of a protectionist; he does not want to spend large sums of money for arms and munitions of war; and he is not a strenuous paternalist. If his principles be analyzed it would be difficult to understand why he is the ROOSEVELT leader in Ohio, and yet he is so rightfully, as he might rightfully be the anti-Roosevelt leader if Mr. FORAKER and Mr. DICK were for the President. Mr. BERTON is the kind of man whom people ask to "referee" things, whether it be a baseball game or a national fight in the ring. In Washington he is an omniscient quiet man—omniscient because he is spending his time finding out information that will be useful to him and harmful to his enemies when the debate begins. He is a most agreeable and interesting gentleman, but he is not around a great deal; the best time to have a chat with him is after he has had his breakfast at the Metropolitan Club. In his quiet way he has made a great deal of trouble in his time for the Cleveland Republican machine, and perhaps he is continuing to get on the State machine. To sum him up: he is one of the public men who get what the politicians have got to give them.

The PENNELL family of Cincinnati continues on a shaling way. Its most conspicuous representative of our time is ELLIOTT H. PENNELL, who is still young enough to enjoy the job which he has undertaken. That job is nothing more nor less than to give to Cincinnati a decent city government, and it is a much more difficult task than that which his uncle, Governor H. PENNELL, took upon himself in ARTHUR's reign, in endeavoring to pass the civil service reform bill. ELLIOTT PENNELL was graduated at Harvard, having gone to that institution amid the sighs and tears of his Presbyterian relatives, who thought that any one who could go to college, and who could even look at one in Princeton, was an utterly morally damaged article. The tradition is that a wise uncle, having obtained shrewd glimpses into the world, prevailed upon ELLIOTT's parents to tolerate the boy's desire for Harvard, by saying that the difference between the young sinners of the two institutions consisted in the length of their sinful moments, since the Harvard sinner sinned in Boston, and could go home the same night, while the Princeton sinner went to New York and the journey to and fro being longer, might not get back for a week. ELLIOTT PENNELL, to many men, is the brilliant general who leads the students of the Harvard and Princeton clubs; but in Cincinnati he publishes and edits the *Citizen's Bulletin* and works with great energy for decent things in government. He says, in his paper and elsewhere, that CHARLES F. TAPP, who seems to have deserted Senator FORAKER and Mr. COX, is the "chief obstacle to genuine reform in the city's government," doing his wicked work with his newspaper, the *Times Star*. So bad is this TAPP to Mr. PENNELL that he is inclined to shudder at the thought of WILLIAM's political association with his brother, but he intimates in the last issue of his paper that the bad gang cannot get back into power in Cincinnati even for hanging on to the skirts of the Secretary's splendidly virtuous general.

Correspondence

"HARPER'S WEEKLY" AND THE PRESIDENT

Washington, Wash., May 8, 1897

To the Editor of Harper's Weekly:

SIR,—I notice that a correspondent in the last number of the WEEKLY regrets your growing animosity toward Mr. Roosevelt. But will you permit me, a reader of your magazine, to express my great pleasure in meeting with a man who, while a constant stream of adulation flows from the mouths of so many others, dares to speak the truth about this favorite of fortune, and to paint his character in truthful colors; who is a manly yet respectful gross insult to the people in truth to facts upon those opposed to him and who schemes the apprehensions name of conspirator, and who points out in vigorous language the radical change which is being brought about in our system of government. The country is to be congratulated that it has one citizen at least who has the ability and courage to speak out.

I wish it might be agreeable to you to tell us what in your judgment ought to be done with the \$200,000 said to be remaining of the vast sum that was placed at Mr. Roosevelt's disposal for his election, and now presumably in the hands of Mr. Cortelyou. I say what ought to be done, not what will be done, for we all know that it will be expended for Mr. Roosevelt's benefit or that of his appointee to the Presidential office. I suggest this, seeing that for many years I have held a policy in the New York Mutual Company, and have seen my money fraudulently bestowed to aid the election of a man whom I was against, and whose influence over the country, and many of those people (so called), I regard as bad.

I am, sir, G. G.

To the Editor of Harper's Weekly:

Baltimore, Md., April 29, 1897.

I wish to say that the true spirit of your paper to the President is little short of abominable; if it were possible to belittle a man of his culture, you would have accomplished it. President Roosevelt has hardly made a movement for reform, for restraint of abuse of power, for checking the reckless advance of those who would handle the people for gain, but that you have by cartoon or veiled comment tried to "give him the laugh," as we Hoosiers say; and I am glad to be able to tell you that many as an Indian now reads your WEEKLY because of the half-century of splendid record back of it, while he counts the treatments of the Executive accorded him in your paper as unpardonable.

In reply to a recent article, you assert your friendship for the President. The wounds of a friend may be harmless, but it hardly seems friendly to hold up for ridicule a harmless foible of a great man, while denying the best mode of praise for splendid achievement, for courage of conviction, and for valor of execution—the absolute sincerity of purpose.

You probably feel that the wave of popular enthusiasm sweeping the country is frenzied and needs checking, but I would suggest that admiration of each quality of the President possesses will not harm his admirers. If he were in any way self-seeking or guiltness, if he failed to sincerely shoulder his responsibilities, if he lacked the iron determination to follow the right as revealed to him, your paper would have just cause to show his errors, though there could be no real harm, it seems to me, in your method of attack; as it is, the WEEKLY is beginning to be eyed with suspicion, and to be read with a feeling of deep indignation. Especially was this the case with your issue of the last week in April.

S. A. HILL.

To the Editor of Harper's Weekly:

Denver, Colo., May 8, 1897

SIR,—As an old subscriber in HARPER'S WEEKLY I desire to protest strongly against your present attitude towards the President of these United States. He is my President as well as our President, and it seems to me you are showing very little respect to his high office.

Though differing with HARPER'S sometimes, I have been proud of the WEEKLY as always independent and of high character, but your present course is very harmful and anything but patriotic. With a large unswerving body of followers in our midst, with the ever present unrest and differences between capital and labor, it would seem to be an American duty to show respect to the highest office in the land. Don't let us have any more cartoons.

I am, sir, S. S. MERRICK.

To the Editor of Harper's Weekly:

Concord, N. H., May 6, 1897

SIR,—I have admired much in President Roosevelt, because there has been much to praise in his several years as the nation's Chief Executive. There is, too, plenty of room for criticism for that part of him that has the appearance of "four-fifths" and I have read with interest what HARPER'S finds wrong in his administration.

Why should we consider the President in the light of a "third-term" candidate, though? I am confident this question receives greater attention from the American public than it deserves. Besides we shall have plenty of time to discuss the very numerous proposition, but at the proper time we will be governed by good common sense, and select a candidate for that exalted position from the large stock of hard-headed men in the country—many, I believe, superior in our present beliefs or apparently so. Personally I still like to see Senator La Follette, of Wisconsin, elected. He has tenacity of purpose unequalled.

I am reminded of a story which I think fits Mr. Roosevelt's case to a nicety.

There was once a man who owned both an intelligent dog and a very learned parrot. The dog was useful in chasing out a

neighbor's chickens, the master's "Sic 'em" being sufficient to rouse the animal from lethargy.

One day the parrot escaped to the back yard, and having learned from its owner the challenge, yelled to the dog, "Sic 'em." The dog looked at the feathered object and took after it. When the avian was over, the parrot looked at its soiled and ruffled plumage and said, "I know what the matter with me: I TALK too much."

I am, sir,

C. L. VANAMAKER.

PROTECTION FOR THE RAILROADS

Concord, N. H., April 29, 1897

To the Editor of Harper's Weekly:

SIR,—As a railroad man, now past threescore, I have devoted the larger part of my active life to the building of railroads, large and small, and I am their friend and not their enemy.

There can be no doubt, however, that they have not unwisely and improperly in some important instances, and continue to do so. In other respects, however, they appear to have been most generously, foolishly, and even culpably, dealt with; and continue to be so treated, and with a remarkable degree of faithfulness as well as folly.

I refer particularly here to the matter of "rate regulation," and that especially by the several States taking the matter in hand.

It has surprised me greatly that some of the great lawyers who have taken the rule of the railroads in their hands have not long since clearly seen that the law of the "common carrier," and the view under it that the railroads were the fully authorized and employed agents and servants of the state, as practically held and administered, carried with them, to all logical and reasonable minds, the fact of a corresponding duty and right of protection to these agents and their interests.

If I employ another to perform a service for me beyond my own means or powers, asking him to use his own means for the purpose, instead of mine, and claims the right to control his charges and income, it would surely seem that I am reasonably and morally bound to refrain from authorizing or employing another agent to do that same thing for me, over the same ground, and in a manner likely not only to injure but absolutely destroy the interests of my previous employee, and cause the loss of means of his living alongside of mine. It would seem, therefore, that the only fair course would be either to let the investor secure himself, as early as possible, against such loss, by making his charges all he could get, or "all that the traffic will bear"; or, if he is forbidden to do this, that the power undertaking to regulate, control, and limit his charges, and income should guarantee him some reasonable protection. I solicit your further reflection on this point.

I am well and easily aware that it would take great rare, caution, and wisdom to carry this view into practice; but I think it still both practical and practicable. We are now engaged in the work of railroad purposes is required to be paid for, when used or damaged by a railroad, and a railroad itself, as an equally valuable piece of property, be voluntarily damaged or destroyed by the public in its own real or fancied interest, without compensation, particularly when its right of self-protection or self-insurance is taken from it.

Under this view I long ago suggested to a member of the Legislature of the State in which I then resided—North Carolina—that he bring forward a bill or law embodying the principle of "protection alongside of regulation and control."

My main aim was still to be that it would greatly promote the building of the very class of railroads that the country most needs at present, viz., small laterals and branch roads, the means for which are abundant, but projects and investors are deterred (therefore) by the point hostility or unfriendly attitude of both the State and the larger and older roads.

In some respects, too, this applies to the reconstruction of larger lines.

My general idea is that regulation or control of rates should carry along with itself some sort and amount of protection, or security against needless, wanton, and malicious invasion and destruction of existing interests; no regulation without fair and decent protection should be the cry.

I do not by any means share the views of ex-President Cleveland as to the impossibility or absolute uselessness of protection, and this and many other respects; nor do I by any means agree with him as to the illiberal and folly of what he is pleased to term the "popular clamor," "frenzy," "driftivism," etc., on the subject. The people are rarely, if ever, wholly wrong in their complaints. Only are they mistaken sometimes as to where the shoe really pinches, or the cause of the trouble really lies.

The great offending of railroads has, I think, been caused by the fact that they have been left to take care of themselves,—made "outlaws" in fact. They have themselves rather liked, and enjoyed this state of things, and sought to promote and extend it by means of the "general railroad laws," and curtailment of legislative sessions in some of the States, in both length and frequency; both of which they and their attorneys secretly urged and carried out, as professions or indifference to them.

"Too much legislation" (it is) too much watching and guarding of public interest has been their cry.

Let all jobs in urging and maintaining wise, just, and equitable laws, a government with and under a Constitution, instead of lawlessness or despotism.

I am, sir, CHARLES H. SCOTT.

A NEGLECTED HISTORICAL TREASURE-TROVE

HOW MANY PERSONS WHO VISIT THE JAMESTOWN EXPOSITION KNOW ANYTHING ABOUT THE REAL JAMESTOWN WHERE AMERICAN CIVILIZATION HAD ITS BEGINNINGS, AND WHERE RELICS OF INESTIMABLE HISTORIC INTEREST ARE NOW RUTHLESSLY ABANDONED TO VANDALISM AND DECAY?

By BYRON R. NEWTON

MELANCHOLY, desolate old "James Town"! Buried beneath its ruins, and for two centuries forgotten by the great republic whose cradle it was, no doubt it is fitting that a world's fair should now be held to celebrate the three-hundredth anniversary of its founding. But of all the visitors who are thronging the shores of Hampton Roads, how many have visited, or even know the location of, the "ghost

town" where the famous old church appears in the midst of a clump of trees. Save what has recently been excavated, that is the only relic of Jamestown above ground.

Back of the tower and enclosed by a crumbling wall a few of the old tombstones, with their quaint inscriptions, have escaped the hands of vandals. Trees of a century's growth, in places, have forced their trunks up through the graves, and now hold the ancient slabs and headstones in the grasp of their massive roots.

Within the last decade the United States government and the Society for the Preservation of Virginia Antiquities have excavated many foundations of the principal buildings, bringing to light a great deal of valuable information about America's first metropolis. Besides the several thousand graves which are known to exist near the church, it was found in excavating that many persons of note had, in the early days, been buried beneath the floor of the structure. One of these tombs showed by the initial letters in the slab that the body of a knight had been laid to rest there. It is supposed to be the grave of Sir George Yeardly, one of the early governors of Virginia, who died in Jamestown in 1627. The richly carved slab placed over the grave of Lady Berkeley had been enveloped by the roots of a massive oak and lifted several feet above the ground, thus protecting this valuable relic for more than two centuries from destruction by human hands. Many of the progenitors of the famous old families of Virginia are buried there, victims of starvation, fever, or the tomahawk.

Unlike the first settlements on the Massachusetts coast, nearly twenty years later, Jamestown colony was largely composed of "persons of quality," many of them belonging to the nobility, and coming with special favors from the throne of England. With these came also adventurers and outcasts, and the life stories of some of these are outlined in the inscriptions still to be deciphered on the time-worn headstones. Here is one of them:

Here Lyeth William Sherwood that was born in the Parish of White Chappell, near London, a great Miner, Waiting a Joyful Resurrection.

Sinful William Sherwood doubtless survived to death or was slain by Indians, and found a resting place side by side with his titled neighbors in the overcrowded God's Acre near the old church. However, the ancient records of Jamestown show that he probably

"ONLY A FEW OF THE OLD TOMBSTONES HAVE ESCAPED THE VANDALS, AND THOSE OF A CENTURY'S GROWTH HAVE FORCED THEIR WAY UP THROUGH THE GRAVES"

Island" forty miles up the James River, where American civilization had its beginning in a hundred years of starvation, pestilence, misadventure, and despair?

Nowhere on American soil is there a spot so fundamentally and vitally sacred to our history and traditions, and nowhere a spot so ruthlessly and utterly abandoned to vandalism and decay. Nowhere in the annals of pioneer conquest is there such a story of human heroism in a prolonged and nerve-racking battle with death.

How many of us know about it? How many who visit the Jamestown Exposition know anything about the real Jamestown, beyond a misty recollection of the old aerial history—the story of "the starving time," of Captain John Smith and Pocahontas?

The most go to the island of Jamestown and stand among its crumbling headstones, feel the solemn, mysterious silence of the place first, then one will read and dream and understand.

Two hundred and eighty years ago, after a struggle of nearly a century, the old capital was abandoned and reestablished at Williamsburg, eight miles distant, and now the nearest point of human habitation. To reach old Jamestown one must follow a path through the forest, guided by the indifferent contours of an ancient road cluttered and obliterated by two hundred years' growth of oak, pine, and holly.

The first view one has of the island in emerging from the forest road is that of a partially washed peninsula curving outward into the wide expanse of the James. Crossing a decaying log bridge, you come upon a marsh traversed for a quarter of a mile by a rudely inclosed tangle, made entirely of the bricks and shingles of the ancient town. The road winds along overgrown mounds and depressions, when, at a sudden turn, the masonry tower of

A FRAGMENT OF ARMOR FOUND IN A KNIGHT'S TOMB DURING EXCAVATIONS ON THE SITE OF THE OLD CAPITAL—PERHAPS BELONGING
TO ONE OF VIRGINIA'S EARLY GOVERNORS

made some amends on American soil. From 1678 to 1680 he was attorney general, and was an adherent of Sir William Berkeley in Bacon's Rebellion.

The foundation walls of nearly all the public buildings have been uncovered and scores of interesting relics found. The spacious cellars of the "State House," "Country House," Governor's palace, besides the foundations of many residences, have been excavated from beneath ploughed fields and forest, giving evidence that they were constructed substantially, and some of them quite elaborately. The walls were built of bricks brought from England and Holland, and the roofs were generally of tile. Remains of immense chimneys, with jambs projecting three feet from the walls, are found to have existed in all of the more pretentious structures. Many fragments of glassware and china, together with household utensils of various kinds, guns of ancient pattern, cannon-balls, and a few pieces of gold and silver have been discovered beneath the ruins of nearly every building. The city was three times destroyed by fire within a century, and was laid waste during Bacon's revolution in 1676. It never fully recovered from this last stroke of ill fortune.

From 1607, the date of its founding, until the city was abandoned in 1609, when the capital was moved to Williamsburg, the death-rate in Jamestown was appalling. Between 1606 and 1610 it is recorded that out of 2540 persons who came over from England to Virginia, 1640 died. Between the latter date and 1625, out of 4749 colonists, 4480 succumbed. Up to 1627, out of a population of 8500 more than 7000 had been buried in the little graveyard near the banks of the James. Yet decade after decade shiploads of colonists were sent over by the King of England, and the Anglo-Saxon race was at last firmly rooted in the New World.

Curiously, indeed, has this spot, now but a sward of dismal marsh and wilderness, been styled "The Cradle of the American Republic," for here the cornerstones of all our institutions were laid. Here was held the first legislative assembly, here was erected the first English church, here was celebrated the first Christian marriage, and here, too, was laid the foundation of our common-school system,

with William and Mary College, following a few years later at Williamsburg, as the first step in our system of higher education. It is a matter of record, as well, that to Jamestown was brought the first African slave. It may not be said, however, that ancient Jamestown established the custom of paying public officials small salaries, as a resolution of the House of Burgesses in 1681 recites that the allowance of Governor Culpeper was about £150 pounds sterling, which, with the perquisite of 500 pounds sterling for house rent, reduced to present values, aggregated about \$50,000.

In 1698 the last destructive fire swept the town, and at a session of the Assembly held in some building unknown, in April, 1698, acts were passed establishing the capital at Williamsburg. From that time on the island became a place of grim memories only. The road to Williamsburg was overgrown in a few years, and the church and few other remaining buildings were burned by the Indians and crumbled into the earth. For more than two centuries it was looked upon as a place haunted by a thousand ghosts, and was rarely visited except by vandals and roving Indians. During the war of the Revolution ruins of its buildings were piled up for temporary defenses, and in the Civil War the Confederate troops erected earthworks there. Generation after generation of vandals and river thieves destroyed and carried away the elaborately carved tombstones, all of which had been imported from England. Only those which were too massive to be removed or broken and those held in the grasp of the roots of trees have been preserved. As if guarded by Providence, the huge tower of the old church has remained in fairly good state of preservation. The silver baptismal font used in it and from which Pocahontas was baptized was saved, and is now in use in Repton Church, one of the historic places in Williamsburg. A considerable portion of the site of the original city has been obliterated by encroachments of the James River. This, however, has been arrested by a strong sea-wall built by the United States government seven years ago. The island is now owned by private individuals, excepting twenty-five acres covering the site of the old town, which has been deeded to the Society for the Preservation of Virginia Antiquities.

THE PASSING OF THE OLD-FASHIONED GOLD-MINER, AND THE COMING OF THE DREDGE

THE individual miner, the picturesque prospector with pick and washing-pan, is being rapidly driven from his last stronghold, the Klondike, owing to the immense area of ground being acquired by dredging companies. The company alone has purchased nearly all the placer ground along the famous Bonanza, Eldorado, and Klondike creeks, and this, for various reasons, has practically depopulated these regions. Where formerly were the huge camps of hundreds of miners, a few men are now engaged in constructing or operating lodging outfits. The romantic pack-trains from Dawson are also a thing of the past, as there is now no demand for the provisions, clothing, and other supplies which they brought—an egg worth \$1, and bacon 85 a pound.

An electric dredge, capable of handling 2000 cubic yards of earth per day of twenty-hour hours, will only require about thirteen men to handle, at an approximate cost for labor of \$196 per day. Wages have gone down to the comparatively reasonable amounts of \$4 per day and board for laborers, and \$5 to \$7 per day and board for skilled mechanics.

One good feature in the changed conditions is that it enables owners of small claims, which were not sufficiently rich to pay for their working by the old method—shaving off the gravel by fire and washing in pans or rockers—to sell their claims at a good price to the dredge companies, and, if they desire, secure employment. Also many claims have been staked and sold to the companies which would not otherwise have been occupied.

There has been a steady decline in the output of gold from the Yukon territory since 1908, during which year high water mark was touched with \$22,275,000. Each succeeding year has seen a decline of from two to five million dollars, that region during 1906 producing but \$8,287,608. The total amount of gold shipped from Dawson during the last year was as follows: Canadian gold involved at the consulate, \$5,297,047; American gold similarly involved, \$35,520; American gold in transit for the United States, \$5,920,672; total, \$11,251,279. Thus American gold shipped through Dawson amounted to \$5,964,211; while Canadian gold shipped from Dawson aggregated \$5,297,067.

OUR NAVY AND JAPAN'S

By WALTER SCOTT MERIWETHER

PUTTING wholly aside that relation which proverbially exists between smoke and fire, this article assumes that there is no friction between the United States and Japan. But since there are many to assert that a conflict lies within the easy range of possibility, and as the navies of the two powers will in all certainty bear the initial brunt of such encounter, it may be interesting to cast up the relative naval strength of the two powers, and to see wherein the advantage might rest.

Just now this country has a preponderance of naval strength. But that strength is mostly assembled on this side of the world, and with most of the seven seas washing between it and the Mikado's far-away fleet. And contiguous to the mailed squadrons of the living Sun are those remote possessions of ours, the Philippines and the Hawaiian Islands.

"I had rather," said Napoleon, "see the English on the heights of Montmartre than occupying Malta." The English occupied Malta and he died a British captive at St. Helena.

In one respect the Philippines and the Hawaiian Islands are to this country to-day what Malta was then to France. And there is no well-informed military or navy officer who doubts but that Japan could now seize both, and possession of them would have an immeasurable advantage, as their loss would deprive this country of bases of supplies, coaling-stations, and that big dry dock which was recently lost to Manila, itself a great asset in war.

"There is he armed who hath his quarrel just," said the Elder Poet. "And four times he who gets his blow in fast," added the younger one.

More than four times armed would Japan be if she should seize the Philippines and the Hawaiian Islands; and at the present moment there is no doubt that she could easily take the two groups, were she so disposed. And in some circles there is no doubt but that she is being urged on to conflict with this country: urged on by European nations who would like nothing better than to see their two greatest successful rivals destroying themselves in war—one against the other.

Whichever way this talk of the vast depreciation of American securities and stocks and bonds? Ask London, ask Berlin.

The cables brought last week two interesting and informing paragraphs. One, which took a Berlin date, said that accredited emissaries of Japan had been given the freedom of the Krupp works at Essen—a privilege which seems to have been so rarely extended as to have caused the correspondent to immediately cable it to his paper. The despatch added that Japan had placed a large order with the Krupp's for numerous guns of various calibers.

The other cable was from a correspondent in the Far East, and which said that all men in Japanese armaments are working overtime, and that these are turning out more guns and munitions of war than had been done during the conflict with Russia. "So far," says the New York Herald, in editorial comment, "luck has smiled on the waiting throne of the dais, loaded in Japan, or elsewhere, and saved us from the ever-lurking bog concealed in the glad land of sailing, diplomatic gambles. But luck is, and always has been, a fickle jade—and our unprepared hour may soon be striking."

One thing is certain. If Japan means to force a war on this country, she must do it before the completion of the Panama Canal, for after that waterway is cut, she must needs be infinitely more powerful than she is at present to wage successful conflict with America.

But the completion of the canal is some years distant. To get back to the present. Owing to the fact that Japan made such short work of the Czar's war-ships, it is generally supposed that Japan has a very superior navy. The Mikado's navy is doubtless all right. But competent observers who followed the Russo-

Japanese war testify that it was not so much the excellence of Japanese preparedness, tactics, and gunnery that won, as it was the absence of these qualities on the Russian side.

"If Japan," said one of these to the writer, "ever goes against a first-rate naval power she will find the difference. It was not so much what the Japs did as what the Russians didn't do."

The table published on this page tells its own story of relative strength. Matched, ship for ship, America could look with utmost complacency upon the outcome. But there is a time-worn adage about being first on the spot with a superior force. In our Atlantic fleet we have now a battle-ship armada that could undoubtedly destroy all of Japan's navy were war declared to-morrow and this fleet in striking distance, with its bases of supplies and its coaling-stations handy. But does any one doubt that Japan would instantly seize these stations, were this fleet to be ordered to the East? Then the advantage would rest with her, and in a ratio that cannot be appreciated, three more Napoleon and Malta. What American President but who would rather see a Jap army encamped on the Potomac than to see the Mikado's flag waving over our Maline of the East? There could be no doubt of the fate of the one, but there would be serious doubts about the other.

All of Japan's naval forces, as all may know, are concentrated in or around the waters of Japan, and the foregoing table shows what that strength is. America's naval strength, on the other hand, is not straggled at all—weakness none the less. We have out there a division of armored cruisers—four of the best of their type and commanded by one of the most capable officers of the navy, Rear-Admiral Willard H. Brownson. But what

could four armored cruisers avail against the thirteen battle-ships and thirteen armored cruisers of Japan? We have also in these waters a division of protected cruisers—four of the best of their type. Our five destroyers would be pitted against fifty-three. We have no torpedo-boats in the East. Japan has seventy-nine. Nor have we any submarines now there. Japan has seven.

It was only a few days ago that the cables brought news of this

launching of a flotilla of new destroyers from Japanese ship-yards. The Japs entered the war against Russia with only nineteen of this type.

No one knows what else Japan is doing to increase her naval and military strength. This seems to have been merely an item that some alert correspondent sent to his paper. Great Britain as an ally of Japan naturally was the first to profit by the lessons of the war, and although the building of her Dreadnoughts was retarded as seriously as possible, news of the construction of that great vessel was in fact every admiralty office soon after the keel was laid. And while all of these were doing their utmost to find out what the new vessel would be, what would be her speed, displacement, guns, and armor, a Japanese Dreadnought, all unharmed, went overboard from a Japanese ship-yard. And no one knows how many more Japan has building or projected.

All other things aside, Japan is worthy of serious consideration. Less than half a century ago Japanese generals went clad in armor and armed only with fans, with which they waved their spear-armed bodies to combat.

New the Japs is hardly cold on the type which told of how this little nation, hardly considered in the rank of first-rate powers, had overthrown the great Northern Bear, the nation which had so long been feared by all of Europe and considered as being able to hold its own against the combined powers of the Old World.

Less than a score of years ago and printing-presses were practically unknown in Japan and books were a rarity. Last year the power of this country's prodigiously prepared armaments, and out more bodies than all of the press-works of England and America.

New the Japs is hardly cold on the type which told of how this little nation, hardly considered in the rank of first-rate powers, had overthrown the great Northern Bear, the nation which had so long been feared by all of Europe and considered as being able to hold its own against the combined powers of the Old World.

Less than a score of years ago and printing-presses were practically unknown in Japan and books were a rarity. Last year the power of this country's prodigiously prepared armaments, and out more bodies than all of the press-works of England and America.

WHEN Great Britain called together the stewards of her colonial dependencies for a conference at the Colonial Office, Lord Elgin read a telegram of welcome from the King in which His Majesty expressed the wish that the deliberations of the conference would result in decisions tending toward a closer union of the colonies with the mother country, and the consolidation of the Empire as a whole. Despite this amiable expectation, the conference is said to have resulted in little save dissension and antagonism. One of the delegates is quoted as characterizing the conference as "a failure from beginning to end." The

ministers pictured in the photograph, together with their official hosts, are placed as follows: In the back row, from left to right—Sir William Hamilton, Mr. Holderness, Sir William Lyne (Australian Minister for Trade and Customs), Mr. W. A. Robinson, in the middle row—Mr. Winston Churchill, Sir Francis Hopwood, General Botha (Transvaal), Sir J. Mackay, Mr. G. W. Johnson, Mr. E. W. Just, Hon. L. P. Brodeur, Sir Robert Bond (Newfoundland), front row—Mr. Asquith, Sir Joseph Ward (New Zealand), Sir Wilfrid Laurier (Canada), Lord Elgin, Mr. Alfred Deakin (Australia), Mr. E. R. Bosser (Natal), Mr. Lloyd-George.

THE RED DEATH AND THE BLACK

By JOSEPH KEATING

NO man goes more cheerfully on the way to death than the miner. One would think that the eternal darkness of the pit would make men miserable and morose. Instead, the men whose lives are spent in perpetual gloom are bright, light-hearted, and equinently content with their lot. In the winter time they see the light of heaven only on Sundays; for during the other days it is dark when they go to their work and dark when they return; that is, if they return; for from the moment they step into the cage that he to take them down into the black mine they put themselves within touch of death in a thousand ways.

What dark hole death may spring from, of course no one knows. The rope may break, let the cage fall a thousand feet down, and smash sixteen human beings into an unrecognizable mass. Or, while still merely at the beginning of the day's work, something might go wrong with the centre-ropes—this thing happens rather often—then the upcoming cage catches the down-going one, and the men and boys are ground very small.

As a man walks slowly along the tunnel to his work, perhaps a slight fidgetiness on the part of Nature loosens the stones in the roof. The stone that drops may seem to only touch the man's cap. But the touch is enough. His comrades carry him home on a rough stretcher of wood, with some tar-canvas over him. The poor mother and her children weep.

The dangers in the "face"—that is, at the actual work of cutting the coal—are so many that it would be quite impossible to mention all.

But the eminent danger is the Red Death! Scientists have long been at work trying to discover and eliminate this source of wholesale slaughter. They know that two things, and two things alone, are responsible: a large accumulation of gas and an exposed artificial light. As the work of breaking out the coal itself produces gas, that evil is inevitable; and as artificial light is necessary to do the work, why, that evil is also inevitable. Taken separately, these things do no harm. But the moment they come

together it is the signal that a few hundred simple souls are called by God.

Red Death fills the black roads. It flies raging, blazing, through the long galleries, seeking whom it may devour. It comes out of the darkness with a roar. Its fury shakes the earth. The roof trembles, breaks, and down comes the mountain in myriads of pieces. The dust mingles with the great flames; the volume of fire becomes too vast for the narrow tunnel. The side walls crumble, burst out, and give the black more room. The ground rocks under the men's feet: they totter and fall; and the appalling fire-torrent rushes over them.

Every man and boy in the pit cries out with terror. They know that the rolling thunder they hear is the roar of death. Even the horses—there may be three or four hundred of them—understand why the roads and walls are trembling. Then men, boys, and horses rush out. The only way to escape is where the light of day comes down the shaft.

This is far away from where they are, and they scream with the horror that is upon them.

Just as they turn the corner of their little gallery to get to the main artery they see the fire. It fills the whole road. It is a great river of red, blue, and green. The gases and dust of the roads give it many colors.

The men, the boys, the horses, rush on before it. It will overtake them. But they rush on, with the poor hope that they can outrun death.

The long, narrow tunnel becomes a jumble of human beings and animals. The men shout, the boys scream, the horses neigh and scream with terror, and trample on the weaker creatures. The dust rises in black clouds. By and by that dust will help to make the flames more fierce and strong. Then it will gain on the living mass rushing before it, and men, boys, and horses will be done, quiet, and the fire-dragon will pass over them.

Even if they escape this monster of Red Death, he has a follower

(Continued on page 817.)

WHY IT IS EASY TO STEAL HALF A MILLION DOLLARS

By RALPH H. GRAVES

IT is fortunate for the public that the really trustworthy chartered accountants of this country do their work with great thoroughness, skill, and honesty. In New York they daily are engaged in inspections that show no flaw, and the same may be said of them in other cities. However, confidence in the pick of the profession does not altogether dispel fears of those who are a discredit to it. The conscientious accountant will be the first to endorse the plea that all the men in his business should be compelled by law to attend to their contracts efficiently.

There has been no explanation to show how it was possible for a clerk to steal securities worth from \$200,000 to \$500,000 from a New York banking institution a short time ago. The question doubtless occurred to everybody who heard of this robbery, one of the most daring and remarkable crimes of recent years. Yet so one comes forward with an answer from Wall Street, where there must be many bankers and accountants able to settle the curiosity of the innocent, though rightfully interested, public.

A flaw, a vital fault, exists somewhere in the system that permits such a theft. That much is certain.

This fault is either the lack of what are called "audits," or in the laxity of those audits, which are the inspections of books and records made for the banks by expert accountants, either firms or individuals. It is an undeniable fact—the authority for this assertion is a skilled accountant for years employed by a firm of national reputation—that no theft of bonds or securities is possible without speedy detection if the audits are properly conducted. No bank or trust company can be victimized by methods such as were used in the recent case so long as careful expert accountants regularly and adequately audit the books. The thing is utterly absurd from the accountant's point of view.

Whether the trust company that was robbed engaged experts to make regular audits has not been divulged. If it did, the audits were faulty. If it did not, there is no reason for the directors to be surprised at the vanishing of \$500,000 or even more. Any one who believes otherwise is at liberty to accept the challenge of the reputable accountant, who, naturally without wishing his name to be disclosed, thus described what was the matter with the system of safeguards against theft of securities:

"In the first place, some of the banking concerns do not have audits by competent accountants at stated intervals. Either they are unwilling to pay the price, or they consider that occasional inspections by insiders are sufficient. A complete audit by a reputable firm of experts is costly. The sum each time may reach \$5000. For every full-fledged accountant the firm charges \$25 a day, and for the assistants, two or three of whom are under such accountant, \$5 a day. The depth of the inspection depends, of course, upon the number of men making it.

"Secondly, the business of expert accounting, except so far as the best firms are concerned, has undeveloped to such an extent since it became generally known in America, ten years ago, that even some of the recognized concerns no longer give the same attention to details they gave in the beginning: cheap help, to a large extent, has come to take the place of personal supervision by the men who built up the business, and there is a tendency to rush through jobs imperfectly, as the extent of the business increases.

"In order to understand that it is entirely impossible for a robbery of securities to take place in a bank and remain undetected by the expert auditors, it is necessary to know what they are expected to do. Besides seeing that the books are straight and the records complete, it is their duty, theoretically, to count every bond or other valuable paper in the possession of the bank. The institutions that hold back any information from the experts are too late to be considered, though there are instances of banks refusing to allow the men they employ to examine all the holdings, on the ground that some features of their business must be kept private. In almost all cases the special auditors have a free swing.

"If, then, every book and every bond is scrutinized, it is manifestly ridiculous to suppose that an employee could steal securities from the vaults throughout a period punctuated by an expert audit. Where there is a proper audit every three months, as is the case in many of the safest banks, the thief can operate for

two months and twenty-nine days without being caught—but that is all.

"How, you ask, can the stealing be perpetrated in an institution that employs a recognized firm of expert accountants to go over its books regularly? Well, as I said, the audit may be imperfect even then, for all the 'recognized' auditors are not good ones. There is no other explanation. The imperfection usually exists in the counting of the securities, not in the checking of accounts. It is easy to find errors in the books, difficult and tedious to find them in the bulky stacks of bonds held for trust funds down in the vaults. If the auditors are trying to rush through their work, as they are wont to do sometimes when the bank has a contract instead of paying the accounting firm by the day, the bond-counting is the field for haste. Inaccuracy is less easily noticed there.

"From the vaults the bank employees bring up to the auditing-room stack after stack of the securities. The only thorough way for the accountant to count them is to seal up each package after satisfying himself that the contents correspond with the record in the bank's books. If he does not do this the same lot of bonds may be brought to him more than once by the employee engaged in stealing. I have known of such a case. The accountant simply counted the bonds and sent the packages back to the vaults. The employee, it afterward developed, would bring the same bonds to be counted a second time, after a lapse of perhaps an hour. For instance, two estates in trust were in charge of the bank. The estate of A contained \$200,000 of securities of a certain railroad. The estate of B owned \$100,000 of the same bonds. The clerical employee had stolen the \$100,000; so he produced half of A's bonds in bringing to the accountant the holdings of B.

"In that instance the accountant did what they so often do when in haste to get through. He barely glanced at the securities to see what was their denomination and character, but did not go into such details as the numbers of the bonds. Had he returned them to the vault in a sealed package, however, it would have been impossible for the employee to produce a portion of them a second time without destroying the seal and announcing his fraud.

"At times experts of such flagrant inefficiency are employed that the thief does not even find a moderate amount of cleverness necessary. He learns that the periodic counting of bonds is a farce. All he has to do is to take the remote chance of some one's happening to look into the package he has robbed. Most likely he discovers, by watching the auditors once or twice, that they merely glance at the outside wrapper of a bundle and take for granted that it contains what is described in the figures written on the cover. If this is their habit the thief's path is easy.

"The long and short of it is that expert accounting is not regulated in this country as it should be; nor are all the banks compelled to order audits and make public the results. The last, of course, would not be a regulation of much value so long as the accounting business was imperfect. Hence it is apparent that the point at which reforms should begin is in the profession of the public accountant.

"While that profession has been important here for less than ten years, and has become, so far as many firms are concerned, less adequate than it was when first introduced, it has grown to a state near perfection in England. We could well learn a good lesson there. Principally would it seem to be wise for us to adopt the English law that makes the auditor legally responsible for a theft he fails to detect in the course of his inspection. In America, undoubtedly, he is morally responsible for a continuation of thefts over a long period of time, when his attention to duty would have put a stop to them in the beginning; but legally he is not regarded as negligent in the slightest degree.

"Should the Governor of New York persist in his reported intention of instituting a thorough investigation of the banks and trust companies he would, undoubtedly, pave the way for new laws controlling those concerns and the accountants. Incidentally, there is no question that the serious would disclose, if not bring to light, numerous instances of unsafe business methods, of lax care of properties held in trust, and probably of ethically culpable if not legally punishable relations between banks and other institutions in which the bank directors are interested."

CAPTAIN JOHN SMITH: AN APPRECIATION

By EARLE HOOKER EATON

OH, PRIMA, Smith, nerous the sea,
Three hundred years ago,
You came to found the F. F. V.,
And hit the pipe with La.
A doughty man o' splendid pith,
Till stricken by Death's evilie
You always were the same old Smith—
You never were a Ruykhe.

Let Dutch New-Yorkers swell with pride,
Because their line is old,
The Smiths one make them all unloide,
When Jamestown's tale is told.
The crown of precedence they do so,
Tis find in their clutch,
For in the point time, dear John,
A'm surely lost the Dutch.

Intimate with ruthless pen,
And shrewd, and cynic shrew,
Accuse you of romantic when
You wrote of your career.
Your glory now shall thus perich,
As Smiths will soon cast snub,
And send detractors off to join
The Annals Club.

About your honored name, I wot,
There cluster many myths,
But who will say that you were not
The dad of all our Smiths?
With brains and brain you led the way
And won undying fame,
And Smiths to millions strong to-day,
Now bear in full your name.

JAMES MONTGOMERY FLAGG

ON AND ABOUT A COLLEGE CAMPUS

By OSCAR VON ENGELN

ONE's earliest conceptions of a college campus are unusually vague in the extreme. Something is usually, perhaps, the dominant idea. But even these, in my case, received a distinct shock on the occasion of my first encounter with the reality in the shape of a Western State university. I don't mean that this very view was unsightly—far from it. Indeed, everything about the place was in the primmest train, and gave one the same impression aside by a House for Orphans—an affair with smooth lawns, formal flower-beds, sapling trees, gravel drives, and characterless brick buildings. If one has ever had occasion to compare a number of European and American landscape photographs, it must have been noted that the chief characteristic of our scenic art is the representation of Nature untrammelled. In our field and roadside pictures there lurks always a touch of her lawlessness—in the shrubbery at their borders, in the rail and stow leaves which girdle them, and in the copes which interpose the prospect. On the Continent, on the contrary, everything bespeaks domestication and this feeling can be detected at once by even the most unpractised eye in all the photographs which come from there. Thus, to be typical, the ideal American college should be located in a more or less gloriously untamed country.

And that is the charm of Cornell, whose recent Ezra Cornell Centennial celebration has brought her prominently into public view. From the first glimpse from the train windows of her gray towers and red-tiled roofs, peering out above the tree-tops, and crowning the summit of the hill on the far side of the valley, identifies her unmistakably. Beyond, in the blue distance, are other higher hills; adown the slope before us white water comes tumbling; while at our feet lies the placid reach of the inlet celebrated as the early spring practice course of the Cornell crew.

Suppose that you have contented your self with but a glimpse of the broad quadrangle, and are sitting out now to see, first, what awaits the Cornellian in his tramps' abode. All directions contain nothing but possibilities; but to the north there offers the fair bosom of Cayuga Lake, inviting you with fresh breezes and dancing, sunlit waves. The combination is irresistible; moreover, you are told that six miles away on the western shore you will come to Taughemock gorge, the end of whose mile-length is marked by Taughemock Falls.

Falling water has, since time immemorial, appealed to the human imagination; and therefore the public down the lake, first in the shadow, under the high cliffs of the west shore, and then past long reaches of open wooded slopes, is none doubly entranced by the goal in view. As you plunge into the cool glow of the gorge, doubly gratified after the water's glare, you follow the seaward marked, narrow, winding path which winds its way, here along a narrow shelf, with the rushing water below and a perpendicular wall 250 feet high above, or again climbing high up on some black talus slope. Thus the mile stretches out long, but finally the

path rounds a sharp turn, and before you, a rolling plain of white, is the full whose waters plunge straight down 216 feet.

The natives tell you proudly that it is "Higher 'n Niagara," for they have not built inequally wooden walls and platters for which to view the herds—on payment of a quarter, but now you pay for the sight by your previous scramble through the rapids, although a pleasure in itself, yet discourages the vast multitude of the unit. The reason, however, that this has not been made a commercial asset, with a consequent complete spoliation of their charm, is, no doubt, the multiplicity of similar gorges and cascades, though not so grand as this, throughout the region. The campus itself is bounded to the east and north by the Cayuga and the Fall Stream gorges respectively, and the course of each of these is a succession of indirectly preceding the present in geological time, also to the continental glacier swept over the northern part of the United States, the north and south valleys of this region, of which this is one, have the brunt of the destructive erosion accomplished by the glacier, and were thus overdeepened as much as 500 feet, their east and west tributaries coupled almost straight. These tributaries were left hanging high above the level of the valley, so that after the glacier's retreat they had to erode down the steep slope of the new valley wall of the latter in order to put their flow into Cayuga Lake. Enough time has elapsed since the first onset of the glaciers, to have such deep gorges in the solid rock. Again the varying hardness of the strata through which different streams have had to cut has given rise to a series of a descent of long which make each one a type in itself. Thus Taughemock falls strays down, while Fall Stream goes as far as to the south, making out a series of steps through the length of a two mile gorge, and in the pools below the rock of water there are trout, not many to be sure, yet much to feed an added thrill to the whole up the narrow length.

If now you have grown chilly of these shady retreats and climb to the summit of Eagle Hill point and from there looking in the midday sunlight of an early back the field yet termed "Candy" by. The vantage point is sufficient high to command all the country to the north and east, and in the broad outlook numerous gorges have been made noticeable cliffs in the north and one sees with its many slopes and outcrops of the surrounding hills. It is in deed, a fair country; there are clumps of forest, and ridges with their winding roads and groves between. Far to the right, gleams the lake and just above it you see once more the University's towers.

"Higher 'n Niagara"

TAUGHEMOCK FALLS—ONE OF THE MANY LARGE CATASTROPHES WHICH ARE A STRIKING TESTIMONY OF THE NON-MOUNTAINOUS COUNTRY ABOUT CORNELL

But will the campus itself fulfill the promise of its environment? For it is in the nooks and the corners, the walks and the portals of his college quadrangle that the student dreams. These make up the picture around which his memories cluster, and whose sight brings back all that is dear to him of college life. They spell to him the spirit of the place.

There can be but a suggestion for you of that which is Cornelia, of the witchery with which the scene you now view is most potently invested for every Cornellian. You are standing before my wrapped Melrose, one of the three esplanades of which you are also Morrill beyond, while White is behind you if dare not say which fate each contains, except to hint of the inextinguishable grime which many butterfly undergraduates have discovered in their sorrow in Morrill. It is after a fresh spring shower, and now that the last drops have splashed in the pools of the belvedere, with a pool which reflect the cleared blue of the sky above—the last of the afternoon strangers are coming forth and leisurely quitting the hill. It is the halcyon interval which comes with a day's work done.

Of such a tangibility are the associations which engender the spirit of the Cornell campus. Even the latest structures, which now complete the great quadrangle, have welded themselves unostentatiously to the whole, so that their newness is unfelt.

What, though, would these imposing edifice avail if there did not centre around them the life and activities of the undergraduate? Indeed, perhaps, to the student's heart is that merry memory which he knows as "Spring Day." Its manifestations are painted bright to the freshman by his upper-class associates from the very day of his entrance into University life. It has for its end the filling of the Athletic Council's coffers, and its form varies with the years; essentially it is a church fair transplanted to tents, and perhaps even greater utilities are perpetrated in its name than in that of its illustrious forbear. In this merry-making the whole University enters with an abandon not always evident when learning is the play. While the treasury of the Athletic Council, as replenished, pays the rest of her battles with other universities, there are sports at Cornell

A Typical American Campus

"THE LAST DROPS HAVE SPLASHED IN THE POOLS OF THE OLD BUILDING WALK, AND THE AFTERNOON STRANGERS ARE COMING FORTH."

the calm evening coolness pervades the atmosphere, and seemingly for a moment, the evening song:

"When the sun fades far away
In the embrace of the west,
And the voices of the day
Bummar low and sink to rest,
"Music with the twilight falls
(For the dreaming lake and dell,
'Tis an echo from the walls
Of our own, our fair Cornell."

Then the shadows creep up fast and one by one wrap the ivy-mantled walls in their embrace until we stand alone and lonely in the vastness of the great sky alone, and with the great breadth of the wide world around our feet.

which prosper with the aid of money-bags. Thus the campus witnesses a whole series of intercollegiate baseball games, wherein are executed many plays which would bring credit to the Varsity team.

In any characterization of the typical American college one must not omit to mention the customs which bind together its community as with golden strands. Young as she is, Cornell has her traditions, of which the "Senior Singing" is the most classical. To the senior who, in these final hours of his undergraduate days, is trying to live every minute they contain to its full measure, the campus speaks as with a living voice. Therefore it is with a mingled feeling of pain and joy that, on three or four evenings in the last weeks of the year, he forgets in the glimmering of the call of the chimes to retire as a class the college airs. From the steps of Northman for an hour the old songs are sung one after the other, spontaneously and full-throatedly, so that the echoes ring back from far across the quadrangle. The tree shadows lie softly on the grass, projected afar by the slanting rays of the sun just balancing above the summit of the verdant hillsides. Then as cold and sinks behind the ridge, and the singers,

A PROFITABLE INTERVIEW

By JOHN KENDRICK BANGS

Beyce won't talk politics. *Daily Newspaper*

"WHAT do you think of Panama?" said I to Mr. Beyce.
"I think," he answered coolly, and quickly as a trier,
"The skating in the Arctic Sea must be so very nice."

"A speaking of the fisheries" may up in Newfoundland.
What think you of that question?" and he answered, very bland,
"The oysters down in Tennessee are fat. I understand."

"What is your notion, Mr. Beyce," said I, "of old Japan.
And San Francisco trying hard to put her 'neath the sun?"
"I think," he said, "that Carnegie's a very pleasant man."

"Then there is Cuba," I went on. "Pray tell me what you think.
Should we take suffering Cuba in, or leave her on the brink?"
"Oh, as to that," he quickly said, "I very seldom drink."

"What do you think of Swedenborg and all his funny jokes?"
Do they compare," said I, "with those of Poesse's witty folks?"
"I always call for Hoffmanns," said he, "with antichrists."

"What think you of the President," said I, "his verse and rhime—
And is it really true that he has dined you Susan Jim?"
"I'm fond of Wagner," he replied, "but few can whistle him."

MAM' LINDA

A Novel

BY WILL N. HARBEN

ILLUSTRATED BY F. B. MASTERS

CHAPTER VIII

IMEDIATELY on parting with Carson, Helen went down to Linda's cottage. Lewis was leaning over the little low fence talking to a negro, who walked on as she drove away.

"Where is Mam' Linda?" she asked, guardedly.

"In de house, Missy," he answered, pulling off his old slouch-hat and wadding it tightly in his fingers. "She ain't heard nothin' yit. Ahm was des tellin' me er whole string er talk folks was havin' down on de street, but I told 'em not to let 'er hear it. Oh, Missy, if guine ter kill her. She can't stan' it. Des no longer's las' night she was settin' in dat do' talkin' 'bout how happy she was to hear Pete was doin' so well over on Marce Carson's place. She said she never would forget young master's kindness to er old nigger woman, er now—de old man agreed cut his hands in a pathetic gesture before him—"now you see what it come to."

"But nothing serious has really happened to him yet," Helen had started to say, when the old man stopped her.

"Hush, honey; she coudn't."

There was a sound of a footstep in the cottage, and then Linda appeared in the doorway and invited her mistress into the cottage, placing a chair for her and dusting the bottom of it with her apron.

"How do you feel this morning, Missamy?" Helen asked, as she sat down.

"I'm well enough in body, honey,"—the old woman's face was averted—"but dat ain't all ter a piason in dis life. Ef des my body was all I had, I wouldn't be so bad off, but let's my mind, honey. The worried 'bout my boy regin. I had bad dreams las' night, en tho' 'em all be seemed ter be in trouble. Den when I woke dis mornin' en tried ter think 'twas only des er dream, I ain't satisfied wid de way all of 'em act. Lewis look gu' on't de eyes, en everybody dat pass erlong, hatter stop en look Lewis off den de fust's er talk. I ain't no fool, honey. I notice things when dey ain't regular. Den here you come 'fo' yo' breakfast time. I've watched you, child, since you was in de cradle en know every bat er yo' sweet eyes. Oh, honey—"Linda suddenly sat down and covered her face with her hands, pressing them firmly in—"honey," she muttered, "suggen's gone wrong. I've knowed it all dis mornin', en I'm actually afraid ter ax you all ter tell me. I cern't think of but one thing. I'm so muddled up, en dat is dat my boy done thowed up his work en gone away off somers wid bad company; en yit, honey—"she now rocked herself back and forth as if in torture, and finished with a steady stare into Helen's face—"dat cern't be it. Dat ain't bad enough ter mek Lewis act like he is en—well, honey, you might as well come out wid it."

Helen sat pale and undecided, unable to formulate any adequate mode of procedure. At this picture Lewis leaned in the doorway, and as his wife's back was towards him he could not see her face.

"I want ter step down er minute, Linda," he said. "I'll be right back. I des want ter go ter de sto'. We're out er coffee, en—"

Linda suddenly turned her dark, agonized face upon him. "You are not goin' till you tell me what is gone wrong wid my child," she said. "What de matter wid Pete, Lewis?"

The old man's eyes wavered between those of his wife and Helen's.

"Why, Linda, you say—"he freely began. But she stopped him with a gesture at once impatient and full of fear.

"Tell me!" she said, firmly. "tell me!"

Lewis shuddered into the cottage and stood near her, a magnificent specimen of the husband of his race. Helen's eyes were blinded by tears she could not restrain. "Tain't nothin', Linda, 'pon my word, 'tain't nothin' but dis," he said, gently. "Dar's been trouble over near Marce Carson's farm, but not our none done say Pete was in it—and er end."

"What sort of trouble?" Linda pursued.

"Er man en his wife was killed over dar in bad last night."

"What man en woman?" Linda asked, her mouth falling open in suspense, her thick lip hanging.

"Ab Johnson en his wife."

Linda bowed forward, her hands locked like things of iron between her knees. "Who done it, Lewis—who killed 'em?" she asked.

"Nobody knows yit, Linda. Mrs. Johnson lived er little while a Begon in Harben's Weekly, Vol. LI, No. 3620.

after de folks come en found 'em, en she said it was er—de hell it was er youngish yaller nigger, en—en—" He went to her being at the end of his diplomacy, and simply stood before helplessly to telling his part in his hand. The man was still. Helen wondered if her own heart had stopped once a tense and strained was her emotion. Linda sat but found to a moment, then they saw her raise her hands to her head, put them there convulsively, and then she gasped.

"Miz Johnson said it was a yaller nigger!" she moaned. "Oh, my Gawd!"

"Yes, but what dat, woman?" Lewis demanded in some sharpness of tone. "Dar's coodlin's en coodlin's er yaller nigger over dar."

"They ain't none of 'em been whipped by de dail man 'fo' 'er boy," Linda was now staring straight at him. "Some of a never made no open threats but Pete. Dey'll kill 'em—"de dived, and her voice fell away into a prolonged sob—"en be no—dey'll hang my po' baby boy—hang 'em—hang 'em!" she suddenly rose to her full height and stood, glowing with her face dark and full of passion and grief combined. She put her hands and held them straight upward.

"I want ter curse Gawd," she cried. "You hear me? I ain't done nothin' ter deserve dis here thing. I've been er pious de—white folks, en my mammy en daddy was 'fo' me. I've not en done my duty ter dem what sinned me, en—en—en I face dis. I hear my child beggin' ter 'em to spare en let ter 'em. I hear 'em beggin' ter see his old mammy to dey kill en I see 'em draggin' 'em off wid er rope round 'em." With a shriek the woman fell face downward on the floor. As if under de influence of a terrible nightmare, Helen bent over her. She was insensible. Without a word Linda lifted her up in her arms and bore her to the bed in the corner.

"Dis guine ter kill yo' old mammy, honey," she whispered. "Dis ain't never guine ter fill up from under it—never it de will."

But Helen had dampened her handskerchief in some water was greatly atoning the dark fury with it. After a moment Linda drew a deep, shuddering breath and opened her eyes.

"Lewis," she said, "so try en find out all you kin. En pray his here en pray Gawd ter be merciful. I said I'll come in, I won't. He my main stay. I got ter trust 'im. 'fo' de fact me I'm lost. Oh, honey, yo' old mammy never got no more favors; stay here wid er pray, pray ter let de here eye be—Oh, Gawd, don't let 'em—don't let 'em! De po' boy didn't do it—he wouldn't harm a kitten—he talked too much 'fo' de mornin' under his whippers, but dat was all."

Motioning to Lewis to leave them alone, Helen sat down at the edge of the bed and put her arms round Linda's shoulders, her old woman rose and went to the door and stood it, but she came back and stood by Helen in the darkness that was now in the room.

"I want you ter git down here by my side en pray be—honey," she said. "Seven ter me but de Lord know ter what folks me den de do de black, anyway; en I want you."

"Im ter spare yo' till fust de Pete des dis time—des er end."

Knowing by the bed Helen covered her wet face with her hands. Linda knelt beside her, and Helen prayed aloud, her clear, sweet voice ringing through the still room.

CHAPTER IX

On Carson Dought's farm, as the place was not particularly kept, the negro lands lived in disarranged by negro women here and there about the fields or in the edge of the woods or surrounding the place. In one of those, at the owner's request, Pete had installed himself, his household effects consisting of a straw mattress thrown on the parsonage door, and a few cooking utensils for use over the big fireplace of the available chimney.

Here he was sleeping on the night of the tragedy which had stirred the countryside into a white heat of race hatred. He had spent the first half of the night at a negro dance two miles out at a farm, and was much elated by finding that he had attracted unusual attention and feminine favor, which was due to the fact that he was looked upon by the country blacks as enjoying one of the usual run—a town shaver with a glib tongue and many other accomplishments, and a negro, too, as Pete counted them, who stood high in the favor of his master, whose name carried weight over it was mentioned.

Shortly after dawn, Pete was still sleeping soundly, as was his habit after a night of pleasure, when his door was rudely shaken.

"Pete Warren, Pete Warren!" a voice called out, sharply, "wake up in da mornin', I tell you!"

There was no response—no sound from within the cabin except the deep breathing of the sleeper. The door was shaken again, and then, as it was not locked and slightly ajar, the little old negro man on the outside pushed the shutter open and entered, standing across the door to where Pete lay.

"Wake up here, you fool!" he said, as he bent and shook Pete roughly. "Wake up of you know what good for you."

Pete turned over, his snoring breaking into little gasps. He opened his eyes, stared doubtfully for an instant, and then his eyelids began to close drowsily.

"Lazy here!" he was roughly handled again by the black hand on his shoulder. "You young fool, you dance all night till you can't keep yo' eyes open in da daytime, but if you don't git er move on you an light out er dis cabin you'll dance yo' fast time wid nothin' under yo' feet but wind. It'll be long in da middle er you de frog."

"What dat—what dat you givin' me, Uncle Richmond?" Pete was now awake and sitting up on the mattress.

"Huh! I come ter tell you, boy, dat you 'bout ter git in trouble, er fer all I know de biggest you ever had in all yo' born days."

"Huh! you say I is, Uncle Richmond?" Pete exclaimed, in credulously. "What wrong wid me?"

The old man stepped back till he could look through the cabin door over the fields, upon which the first streaks of daylight were falling in grayish, misty patches.

"Pete," he said, "somewhile done slip in Ab Johnson's house er brain him on his wife wid er axe."

"Huh! you don't say!" Pete stared in sleepy astonishment. "When dat happen, Uncle Richmond?"

"Dis er hill white age, de old man said, 'Ham Black come er tell me. He say er better all hole out; it gwine ter be de big gest 'foulment ever heard of in dis mountain, but, Pete, you de main one ter look out.'"

"Me! Huh! what you say dat fer, Uncle Rich?"

"'Ce de dry gwine ter look fer you de too one, Pete. 'Ce're you been talkin' too much out yo' mouth 'bout dat whippa' Johnson done give you on Sam Dallow er de rise out in town dat night."

"Ham tol' me ter come warn you ter hide out, er dat quick. Ham say he know in reason you didn't do it, 'ce're he say yo' bark it was 'n yo' bite. Ham say he let 't was done by some sinner dat didn't talk so much. Ham say he mighty nigh sho' Sam Dallow done it, 'ce're Sam met Ab Johnson in de big road yesterday er sinner come on ter de sto' lookin' lak er devil in men's clothes."

But he didn't say nothin' er de axe. Look lak he was devin' fer, kidin' his time."

Pete got up and began to dress himself.

"I bet mysel' Sam done it," he said, reflectively. "He's er bad sinner, Uncle Richmond, er ever since Johnson er Dun Willis whipped dat round he's been talkin' er on growlin'."

But as you say, Uncle Rich, he didn't talk out again."

"Dat don't make no difference, boy. The old black man went on, seriously. "You git out'n here in er hurry er stick er trail fer dem woods. Even den I doubt of dat gwine ter save you. 'Ce're Dun Willis got er pair er bloodhounds dat could smell sinner tracks den er ten inch stone."

"Huh! I say, Uncle Richmond, you don't know me," Pete said.

"You don't know me of you 'bwe I'm gwine ter run him down white men. I ain't nigh dat. Ab Johnson's house—and even 'cross his line er fence, I promised Marcus Car-

son Bright not ter go nigh 'im; er—er I promised 'im ter let up on my gun, on I done dat, too. No, uth, Uncle Rich, you

git somebody else ter run yo' foot-race. I'm gwine ter cook my breakfast lak I always do, er den go out ter my sprouts dat has ter be grubbed."

"Look here, boy!" the old man's blue-black eyes glared as he stared at Pete—"I know yo' mammy er daddy er I like um. They good folks, er always was friendly ter me er I don't like ter see you in dis mess. I tell you I'm er old man. I know how white men set in er case like dis—dey don't have no pity er pity er pity. Dey will kill you sho'. Dey'd er been here 'fo' dis, but dey gittin' together. Listen! Hear dem hawes er yellin'—dat at Wilson's sto'. Dey will be here soon. I don't want ter stan' here er argue wid you. I ain't had nothin' ter do wid it, but dey would' nigh done er it onto me of dey found out I come here ter nash you. Herry up, boy!"

"I ain't gwine ter do it, Uncle Rich," Pete declared, firmly and with a grave face. "You are er old man, but you ain't givin' no good advice. Ef I run dey would say I was guilty sho', er den, er you say, de dogs could track me down, anyway."

The boy's logic seemed unassailable. The piercing eyes of the old man flickered. "Well," he said, "I done all I could; I'm gwine home now. Even now dey may know I come here at yo' early time er mix me in it. Good-by; I hope fer yo' old mammy's sake dat dey will let you off. I do sho'."

Left alone, Pete went out to the edge of the wood behind his cabin and gathered up some sticks, leaves, and pieces of bark til at had built from the decaying boughs of the trees a sort of den into the cabin and deposited them on the broad, stone hearth. Then he uncovered the coals he had the night before buried in the ashes, and made a fire for the preparation of his simple breakfast.

CHAPTER X

His breakfast over, Pete shouldered his grubbin'bag, an implement shaped like an adze, and made his way through the dewy undergrowth of the wood to an open field a eighth of a mile from his cabin. There he set to work as what was considered by farmers the hardest labor connected with the cultivation of the soil.

His back happened to be turned towards the store, hardly visible over the swelling ground in the distance, and so he failed to note the rapid approach across the shadow of two men till they were close upon him. One was Jeff Brainer, the sheriff of the county, a stalwart man of forty, in high top-boots, a leather belt holding a long revolver, a broad-brimmed hat, and coarse gray suit; his companion was a hastily deputized citizen armed with a double-barreled shotgun.

"Put down that bar, Pete!" the sheriff commanded sharply, as the negro turned with it in his hand. "Put it down! Drop it!"

"What I gwine put it down fer?" the negro asked in characteristic tone. "Huh! I got ter do my work."

"Drop it, and don't begin to give me your jaw," the sheriff said.

"You've got to come on with us. You are under arrest."

"What I under arrest fer?" Pete asked, still doggedly.

"You are accused of killing the Johnsons last night, and if you didn't do it you are in the tightest hole an innocent man ever got in. Kleg and I are going to do our best to put you in safety in the Gilmore jail so you can be tried fairly by law, but we've got to get a move on us. The whole section is up in arms, and we'll have hard work gettin' away with you. Come on. I won't rope you, but if you start to run we'll shoot you down like a rabbit, so don't you try it on."

"My Lawd, Mr. Brainer, I didn't kill dem folks," Pete said, pleadingly.

"Well, whether you did or not, they say you threatened to do it, and your life won't be worth a hill of beans if you're here. The only thing to do is to get you to the Gilmore jail. We might make it through the mountains if we are careful, but we've got to get horses. We can borrow some from John Parsons

Drawn by F. B. Hutton

"You'll dance yo' last time wid nothin' under yo' feet but wind"

down the road, if he hasn't gone crazy, like all the rest. Come

"I tell you, Mr. Brainer, I don't know er thing 'bout dis, but it looks ter me lak maybe Sam Dodder—"

"Don't make any statement to me," the officer said, humanely. "You are accused of a dirty job, lute, and it will take a dang good lawyer to save you from the halter even if we save you from this mob; but talkin' to me won't do no good. Me 'n' King here couldn't protect you from them men if they once saw you. I tell you, young man, all hell has broke loose. For twenty miles around no black skin will be safe, much less yours. Innocent or guilty, you've talked too much. Come on."

Without further protest, Pete dropped his bar and went with them, doggedly and with an overpowering and early sense of injury, walking between the two men.

lay, waiting between two trees. A narrow, private road, which they traversed without meeting any one, carried them to Parnassus's farmhouse, a one-story frame building with a porch and a roof that sloped back to a beam-toe shed in the rear. A wagon stood under the spreading branches of a big hick, near a bean-logged harrow nestled down by a stump of a tree, a chicken-coop, an old beehive, and a run-shackle buggy. No one was in sight. No living thing stirred about the place save the turkeys and ducks, and a barnyard dog barked from where a row of half-buried stones marked the mountain-side against the secret folds of the gravel walk from the gate to the stairs.

The sheriff drew the gate open and hailed lustily, according to country customs. After a pause, the sound of some one moving in the house reached their ears. A window curtain was drawn aside, and later a woman stood in the doorway and advanced warily to the edge of the porch. She was portly, red of complexion, about middle-aged, and dressed in checked gingham, the predominating color of which was blue.

"Well, I'll be switched!" she ejaculated. "What do you-uns want?"

"He's over in his hay-field, or was a minute ago. What you want with him?"

"We've got to borrow some horses. We want three—one for each. We're gona' try to dodge the mob. Mrs. Parsons, an' put this feller in jail whar he'll be safe."

* That boy!¹⁶ The woman came down the steps, rolling her sleeves up. "Why, that boy didn't kill them folks. I know that boy; he's the son of old Mammy Linda and Uncle Lewis Warren. Now, look here, Jeff Insulder, don't you and Bill King go and make fools of yourselves. That boy didn't no more do that nasty work than I did. It ain't in 'im. He ain't that look. I know stiggers as well as you or any one else."

"No, I didn't do it, Mrs. Parsons," Pete affirmed. "I didn't. I didn't!"

"I know you didn't," said the woman. "Wasn't I standin' here in the door this mornin' and saw him git up an' go to get his wash and cook his breakfast? Then I see 'im shoulder his grubbin' and go to the field to work. You officers may think I was knowin' it all, but no sinner didn't go 'd in stay around like that after killin' a man an' woman in cold blood. The sinner that did that was some scamp that's fur from the spot by this time and not a boy fetched up among good white folks like this one was, with the best old granny and dandy that ever had kinky hair."

"But witnesses say he threatened Abe Johnson a month ago," said the sheriff. "I have to do my duty. There never would be any justice if we overlooked a thing as pointed as that is."

"Threatened 'im?" the woman cried. "Well, what does that prove? A nigger will talk back an' act surly on his death-bed if he's mad. That's all they have of defendin' themselves. If that

he's mad. That's all they have to do dreamin' themselves. If Iote hadn't talked some after the las'in' he got from them men, that'd a' been some'n' wrote with him. Now, you let 'im loose. As shore as you start off with that bar he'll be lynched. The fact that you've got 'im in tow will be all them crazy men want. You couldn't get two miles in any direction from here without bein' stopped; they're as thick as fleas on all sides, an' every road is leadin' south."

"I'm sorry I can't take your advice, Mrs. Parsons," Bralder said, almost angrily. "I've got to do my duty, and I know what it is better than you do."

"If you don't off with that boy his blood will be on your head," the woman said, firmly. "Let alone not advised to hide out till this excitement is over, he might stand a chance to save his neck; but with you—why, you mought as well stand still and yell to 'em to come on."

"Well, we've got to get horses to go on with and yours are the best."

— Well, you want your be damned sugar to be warmed on my stick. — the woman said, sharply — I know what my duty lies. A woman with a thimbleful of brains don't have to listen to a long string o' testimony to know a murderer when she sees one; that boy's as harmless as a kitten, and you are tryin' your best to have him hanged —

Well, the law is on my side, and I can take the horses if I see fit in the furtherance of law an' order. If Dale was here he'd tell me to go ahead, an' so I'll have to do it, anyway. Well, I'll be on my way, an' I'll bridle the horses an' lead 'em out."

A queer look, half of anger, half of definite purpose, settled on the strong rugged face of the woman as she saw the shrill stalk off to the barnyard gate enter it, and let it close after him.

"Bill King," she said, drawing nearer the man left in charge of the headbanded prisoner, who now for the first time in the words of his defender had sensed his real danger—"Bill King, you haven't come in to lead that poor boy right to his death this way—over

don't look like that sort of a man." She suddenly swept her furtive eyes over the barnyard, evidently noting that she was now in the stable. "Xu, you haven't—for I haven't yet!—let you!" Suddenly, without warning even to the slightest glint of facial expression, she grasped the end of the string in her hand and whirled him round like a top.

"Run, boy!" she cried. "Run for the woods, and God be with you!" For an instant Pete stood as if rooted to the spot, and then as swift of foot as a young Indian, he darted through the trees and round the barnhouse, leaving the woman and King desperate for the possession of the gun. It fell in the ground, he grasped King around the waist and clung on to him with tenacity of a furious dog.

"There was a thunderous oath from the barnyard, and, rising a hand, the sheriff ran out.

"What the hell— Which way did he go?" he demanded.

But King, still in the tight embrace of his assailant, was too badly upset to reply. And it was not till Fraider had let her locked hands loose that he could stammer out, "Run! Run! Run!—into the woods!"

"An' we couldn't catch 'im to save us from—" Eddie said.

"Madam, I'll handle you for this. I'll push this one against you to the full limit of the law."

"You'll do nothing" of the kind," the woman said, "unless you want to make yourself the laughing stock of the whole nation. I shan't want I asked for all the good women of the country," she said, "an' when you run agin we'll beat you at the post. Law an' order's one thing, but officers' rights' mo' so. That's it is another. If the boy deserves a trial he deserves it. He's not 'a' stood one chance in ten million in your charge or 'a' knowed it."

At this juncture a man emerged from the close-growing willows across the road, a look of astonishment on his face. It was Mr. Parsons. "What's wrong here?" he asked.

"Go, nothin' much," Braddy answered, with a white heat of fury. "We stopped here with Pete Warren to borrow your horse to get 'im over the mountains to the Gilmore Jail, an' your wife grabbed Kiff's gun while I was in the stable an' used it against him."

"Great God! what's the matter with you?" Paterson thence at his wife, who, red-faced and dazed, stood rubbing a bruised spot on her wrist.

"Nathin's the matter with me," she retorted. "except I've a more sense than you men have an' know the boy didn't kill de girl."

"Well, I know he did!" Parsons thundered. "But he'll caught before night, anyway. He can't hide in them woods in the middle like a chicken and leave the road."

"Your wife 'loved' he'd be sure in the woods that it is
Glennville Jail," Huxley said, with another snarl.

"Well, he would, as for that," Parsons retorted. "If you think that army headed by the dead woman's daddy an' brother will halt at a penny bird-cage like that you don't know no. They smash it like an egg-shell. I reckon you fellows will pretend to fear the law. Well, I'll go down the road an' tell 'em what to do. There'll be a picnic some'n's nigh here in a powerful short time. We've got men enough to surround that whole mountain."

CHAPTER XI

[illegible]

Suddenly bending himself, and freder for the second and he had got, he sped onward again, choosing the valley rather than the steeper mountainside. Short's gun reports, born bluen, and the flash of the barrels now followed him. Suddenly he was in

...bearing mountain stream about twenty feet wide and not deeper than his waist, and in many places barely covering the bed.

crossed stones over which it ran. Here, as if an inspiration came, the remembrance from some story he had heard about a person once managing to elude the scent of bloodhounds by taking a water, and into the icy stream he plunged and more slowly and

But his reason told him this slow method really would not benefit him, for his pursuers would soon catch up and see him from the banks. He had waded on the stream about a mile when

he came to a spot where the stout branches of a sturdy tree hung down within his reach. The idea was worthy of a white man's brain, for, as he stood pulling on the bough to test its strength, he conceived the plan of getting out of the water there and climbing into the dense foliage above, where his pursuers might not think to look, and the hounds, bent on catching the scent where he had been, would speed onward, farther and farther away.

He drew the bough down till its leaves sank under the water, but it bore his weight well, and from it he clambered to the massive trunk and higher upward, till, in a fork of the tree, he rested, noticing with a thrill of joy that the bough had righted itself and hung as before above the surface of the stream. On came the dogs; he could not hear them now, for they made no sound, but he heard the heavy, maddened voices of men urging them on. On they came. The swift through undergrowth, the pitter, as of rain on dry leaves, the hurrying of gravel behind them—the snuffing and sneezing—that was the hounds. Closer and closer Pete begged the tree, fearfully breathing, fearing now that the water dripping from his clothing or the leaved leaves of the bough would betray his presence. But the hounds, one on either side of the stream, their noses to the earth, dashed on. Pete caught only a gleam of their sleek dark coats and they were gone. Behind them, panting, came a dozen men. In his fear of being seen Pete dared not even look. With closed eyes pressed against his wet coat-sleeve, he clung to his place, a hunted thing, neither fish, fowl, nor beast, and yet like them all.

"They will run 'em down!" he heard a man say. "They never fail. He thought he'd throw 'em off by taking to water. He didn't know we had one for each bank."

On ran the men, the sound of their progress becoming less and less audible as they receded. Was he safe now? Pete's slow intelligence answered no. He was now fully alone in his danger. He might stay there for a while, but not for long. Already, perhaps owing to his desperate running, he had an almost maddening thirst, a thirst which he there and then felt as a red stream on near tantalized. Should he descend, shake his throat, and attempt to regain his place

Drawn by F. B. Sturges.

"Well, I know he did!" Parsons thundered. "But he'll be caught before night, anyway!"

now added those of hunger. For hours he stood thus. He saw the light of day die out, first on the landscape, and later on the clear sky. Now, he told himself, under cover of night he would escape, but something happened to prevent the attempt. Through the darkness he saw the glitting lights of many pine torches. They passed by and far under the trees, sometimes quite near him, and as far as he could see up the mountainsides they flickered like the sinister night-eyes of his doom. He had stood till he felt as if he could do so no longer, and then he got down on the bough as before, and after hours of conscious hunger and thirst and cramping pains he slept again. Thus he passed that night, and when the golden rays of sunlight came piercing the mountain mist and flooding the landscape with its warm glory, Pete Warren, hearing the voices of sleepless ravens, more more numerous and harsh and pecked with hair, fearing them on all sides from far and near, he dared not stir. He remained perched in his leafy nook like some wild and yet half-knowing thing of primordial days, avoiding the darts and arrows of the high-checked straight haired men lurking beneath.

To be continued.

THE FIRST WOMEN DEPUTIES IN THE DIET OF FINLAND

NINETEEN WOMEN HAVE BEEN CHOSEN AS REPRESENTATIVES OF THE PEOPLE TO SIT IN THE FINNISH DIET, THE FIRST IN THE WORLD TO BE ELECTED DEPUTIES. UNFORTUNATELY, ONE OF THEM IS A COON.

WHAT DOES THE FUTURE HOLD FOR MEXICO?

By HENRY LITCHFIELD WEST

Commissioner of the District of Columbia

FROM 1827 to the present time, with the exception of an interregnum of four years, during which time the Constitution was amended by the elimination of the clause which forbade the reelection of a President, Porfirio Diaz has presided over the destinies of Mexico. In these three decades

a remarkable evolution of the Mexican people has occurred. From a volatile, revolution-loving race, which characteristics still pervade the republics of the Latin race in South America, the Mexicans have advanced into a condition of peaceful, settled activity. They are appreciating the value of the enormous resources which make Mexico the treasure-house of the world, and, apparently, they do not intend to jeopardize their remarkable development. If this be true, the first is one of vital interest to the people of the United States. From an international point of view it is essential that the country which borders us upon the south shall be stable and contented. From the financial and commercial standpoint, it is still more imperative that there shall be no disturbance. The republic of Mexico is to-day enjoying a prosperity hitherto unequalled. It becomes, then, a most important question to consider whether the equilibrium which has established this prosperity will continue. It is an inquiry which affects millions and millions of dollars of American capital and thousands upon thousands of American lives. The sensitiveness of the American mind upon this subject was fully demonstrated last September. An uprising of the Mexicans against Americans in Mexico was then predicted. The date fixed for the hostile demonstration was Mexico's Independence day. While those fully acquainted with the situation felt absolutely no concern, there was, nevertheless, a distinct sigh of relief both in Mexico and in this country when the fatal day passed without disaster.

Mexico's material advancement is in part due to the present era of world-wide commercial expansion, but still more is it to be attributed to the wise and vigorous rule of President Diaz. He is the architect, builder, and guardian of the republic. In the beginning, Diaz was Mexico and Mexico was Diaz. If this does not

continue to be true in the same literal and emphatic sense, Porfirio Diaz himself, with a patriotic determination to preserve his country after he shall have departed, is surrounded here with men who, having been educated and trained by him, are fully capable of continuing his policies and following the path

which his example has shown to be the toward stability and progress. In other words, he is leaving the future not a state which shall have a champion his conduct in the past. He is not beyond the all-time necessary span of time. Although vigorous, not actually and physically the time must be long postponed before the next succession of authority will be less an administrative success. What will happen then? Mexico's entire progress as well as the come involved in a eternal trouble she will receive the possibility of its progress? The answer seems to be that more or less that inquiry made long ago in Mexico, with considerable time spent in the capital city, may be summarized in the words whose discussion and lives are involved in the importance of the future. That might have happened if the rule of President Diaz be an unfortunate failure had been continued many more years, of course, a matter of conjecture. The probability is that the stability of Mexico would not have been achieved many years of two and three generations have, however, their coming also upon the people. The latter have learned the value of order and order. The success of the golden fruit of success, and they know that the harvest has ripened under the benevolent sunshine of good government. The men who are being trained by President Diaz are the men of the thirty who are already departed are educated, competent, wise, and brave-minded. Side by side the Central American

Porfirio Diaz

present Vice-President, for instance, has the respect of the new republic, while the members of the cabinet are men of considerable statesmanlike qualities. It is not without significance that the men have profited by the prevalent prosperity, and there are no contingent of the foundation upon which it has been erected. The

THE FIRST IMPORTANT EVENT OF THE SPRING RACING SEASON IN THE EAST, THE \$20,000 BROOKLYN HANDICAP, WAS WON AT THE GRAVESEND TRACK BY JAMES R. KEENE'S THREE-YEAR-OLD COLT "SUPERMAN." "BEACON LIGHT" WAS SECOND, AND "NEALIN" THIRD.

THE DISASTROUS RAILROAD WRECK IN SOUTHERN CALIFORNIA

THIRTY-FIVE PERSONS WERE KILLED AND MORE THAN A SCORE INJURED IN THE WRECK OF A SPECIAL TRAIN ON THE SOUTHERN PACIFIC RAILROAD AT BURNS, CALIFORNIA, SIXTY MILES NORTH OF SANTA BARBARA. THE SPECIAL WAS BEARING A PARTY OF MYSTIC ADHERENTS FROM A SESSION AT LOS ANGELES, WHEN IT WAS DERAILED AND DETROD WHILE RUNNING AT HIGH SPEED.

The Red Death and the Black

(Continued from page 201.)

more terrible than himself. For behind the flame comes a perfect whirlwind of furnace-hot dust—the scorching blast that follows in the track of every explosion.

A man may escape the fire. In his flight he falls flat upon the ground. The fire in its fury rushes over him without being able to harm him. But the moment he rises he feels about his face a something that is at torture heat. It hisses and tears the skin from his cheeks, peels it off, as if he had suddenly thrust his head into a caldron of molten lead. The agony throws him writhing upon the ground again.

That second fall to the ground may prolong his life for a few moments. It is the track of the molten blast to rush along the roof, and leave the air at the bottom of the road cool and pure. He discovers this. He breathes joyously. The air is pure! But it remains at only for a fraction of a minute.

Now comes the worst rainy of all—the poisonous "after-damp"—carbide-acid gas and alltrages, the product of combustion of the air. It strikes, invisible, through the roadways, at the tail of the blast. It can neither be seen nor heard nor felt. It is mysterious. It is terrible. It spreads through the air its laviable poison, drowsy as opium fumes.

Far ahead of him in the darkness the mass has a faint red tinge along the roof. That is the advancing blast. Its strength is demoralized. It sweeps before it horses, trams, men, and boys, and crushes them all into one great heap of wreckage. It rushes out with the driving force of a hundred express trains.

Ahead the mass hears this carnage-making roar. He rushes back. He thinks he will get at the main road by another way. All over the pit hundreds—out of the track of the blast—are doing the same. They are running along the tunnels, looking for a way out. They have escaped the blast. All that remains is to reach the eye of the pit and go up to the light of the day.

But the hundreds running along in the darkness begin to feel sleepy and tired. Quite silently, without any of the superstitious behavior of its creator, the after-damp has caught them. Of each hundred about ninety-five will die peacefully. They will have no burns, no bruises. Their features will be placid, their cheeks may under the black dirt. The after-damp kills silently. And when the searchers come they will find groups of men lying on the ground in natural positions, just as if they were merely sleeping. But they are all dead.

The "after-damp" is heavier than air. It sinks to the ground, and as more and more comes pouring in, it rises in an inviolable tide. A few moments before they lie down the men see the little boys fall sleepily to their knees. Fathers take their sons in their arms to carry them home. But fathers and sons soon lie down together in the dust. The mysterious, invisible after-damp has crept into their lungs, and they are eternally sleeping.

Couldn't Fool Him

THE younger son of a well-known politician of Chicago has spent pretty much all of his life in the big city by the lake, and, consequently, knows little of country ways and things.

Not long ago he visited a man he had met in Chicago, and who maintains a big farm near Cairo, whether he had invited the younger come for a lengthy stay.

One day the Chicago youth was wandering about the farm, closely examining the top, ends, and sides of a certain trim, well-made object forced round in the paddock.

"What are you searching for, Jimmy?" asked the owner of the place, with a quizzical smile.

"Where are the doors and windows?" asked Jimmy.

"Doors and windows? Why, Jimmy, that's a haystack!"

"Look here, old man," exclaimed Jimmy: "I may be only a green person from the city, but you can't kid me that way. Hay doesn't grow in bumps like that!"

RICHMOND'S HISTORIC CHURCH

By CHARLES MARSHALL GRAVES

"The small parcel of ground enclosed at St. John's Church is the most renowned historical spot in all America, and it should not be marred, modified, occupied, or transformed for any ordinary cause"

SO writes Mayor Carlton McCarthy, of Richmond, in vetoing the ordinance which the vestry of old St. John's Church wished to have adopted into a law giving them the right to erect a modern parish-house for church entertainments and festivals in the churchyard where sleep many of Virginia's illustrious dead.

The proposition to erect such a house in St. John's churchyard, under the very shadow of the old sanctuary where Patrick Henry made his famous speech ending with the words "Give me liberty or give me death," has created a storm of protest. From every part of the South letters have come, urging the Council not to pass the ordinance sought by the vestry, and commending the Mayor for his action in vetoing it.

This is the second attempt in the past few years on the part of the growing congregation of St. John's Church to make some alteration either in the building or in the grounds, but so sacred are this edifice and its immediate surroundings held by the American public that the bare mention of change has created wide opposition. Letters have come from as far south as Texas; and when it was proposed to erect the small vestry-room adjoining that part of the church in which Patrick Henry made the famous speech which was the battle-cry of the Revolutionary War, several New York papers published editorials and letters from various correspondents protesting against it as a sacrilege.

However some may dispute Mayor McCarthy's estimate of the historical sacredness of the church and churchyard, it is a fact that there are few buildings in America so well known and so eagerly visited by tourists, and while much attention is drawn to

it by Patrick Henry's very words, in the churchyard sleep one or more Governors of Virginia; also George Wythe, one of the signers of the Declaration of Independence, whose grave, strange to say, has been but recently located very nearly under the pew in which Patrick Henry stood during the delivery of his address.

So determined is the city of Richmond not to permit any new buildings in the churchyard that the Mayor has proposed that the city give the congregation a lot sufficiently large for a church and all the institutional buildings which the congregation may wish to erect, and has even gone so far as to say that if necessary to prevent the congregation making changes either in the old building or in the grounds the city could well afford to erect the necessary structures on the donated lot.

A most significant approval of the action of the Mayor comes from the Association for the Preservation of Virginia Antiquities, which has passed a resolution commending the Mayor for his stand, promising him the support of that organization in preventing any further attempt to mar and modernize either St. John's Church or the surrounding grounds. This is the organization which owns the most historical portion of Jamestown Island including the church tower and graveyard there, and which is doing a wonderful work for the preservation of historic sites and buildings in Virginia.

It is intimated that the vestry of St. John's will press their ordinance, with a hope of getting it through the Council over the Mayor's veto, and within the next thirty days Richmond will see a brisk fight between modern progress on the one hand and love for historic association on the other.

Don't Shoot, Cupid. For My Sake Don't

MATER FAMILIAS: "Great Scott! Two More Mouths to Feed!"

A Slight Misunderstanding

A WELL-KNOWN Boston lawyer says that not long ago he was astonished to see printed in a newspaper a glowing testimonial as to the benefits to be derived from using somebody's Cerequick. The office of the concern was located near his own, and he dropped in while out for his lunch.

"See here," he remarked, somewhat forcefully, when in the presence of the manager: "you have printed a testimonial altogether from me with regard to your compounded stuff—and I never took a drop of it in my life. What do you mean by such procedure?"

"Is that so?" the manager said, soothingly. "Merely a slight misunderstanding. I assure you, sir, for which I am very sorry. You see, we understood that you had died recently. Take this down, please," he added, turning to a stenographer: "Memorandum: change signature to sworn testimonial No. 124,346."

The Mayflower's Fancy

Why am I called the Mayflower?
I think I can tell you why:
I come in May
When the brass bands play,
And the banners flap and fly.
While out of the earth I'm growing,
Over the blue and gray I sigh—
Watch and ward I keep
O'er their dreamless sleep—
And that is the reason why!

R. K. McKEITHRICK.

Plain and Simple

A MEMBER of the Cleveland bar tells of a country justice in Ohio who was fond of rejoicing upon every one in court the necessity of brevity in offering testimony is ordinary talk.

On one occasion this worthy successor of Dogberry was admonishing an old man who appeared as a witness in a trifling case.

"You must not, sir," observed the justice in his most solemn manner, "use so many words. Do you understand?"

"I do, your Honor."

"Then you must, in the fewest words of which you are capable, answer the plain and simple question whether, when you were crossing the street with the child in your arms, and the carriage was coming down on the right side and the truck on the left, and the express-wagon was trying to pass the carriage, you saw the plaintiff between the truck and the express-wagon, or whether and when you saw him at all, and whether or not near the carriage, truck and carriage, or either, or any two, and which of them respectively, or how it was."

The Cruise of the *Shining Light*

By NORMAN DUNCAN

Author of "Dr. Luke of the Labrador," etc.

NORMAN DUNCAN

EVERY now and then, as the years go, there is born a big book—a book everybody talks about in feeling words. Now, all unheralded, comes *The Cruise of the "Shining Light,"* by Norman Duncan, which, through its very force and simplicity, wins this universal chorus of praise from every state without one discordant note.

Hear what some of the reviewers say:

"Nicholas Top is a character that Dickens and Stevenson might have envied. He will take his place as one of the most likable 'damned rascals' in modern fiction."—*N. Y. Globe*.

"No modern novel has so gripped me in years. If readers of fiction have not lost a taste for 'style' in writing, poetry in description, and lifelike characterization, *The Cruise of the 'Shining Light'* should take rank at once as the finest novel of recent years."—Henry C. Shelley, Literary Editor, *Boston Herald*.

"Every page has character, and every stage of the love affair of Dannie Callaway and pretty little Judith is romance pure and simple."—*N. Y. World*.

"Those who are looking for novelty need look no further than *The Cruise of the 'Shining Light.'* One of the most thoroughly original romances. . . Both thrilling and satisfactory."—*Chicago Record-Herald*.

"Duncan's people have a way of winning you over."—*N. Y. Evening Sun*.

"A book of charm and sympathy."—*Albany Argus*.

Why We Hammer Continuously on the Mechanical Efficiency of the

Three-Cylinder
Two-Cycle
Elmore
\$1750

Four-Cylinder
Two-Cycle
Elmore
\$2500

It happens that this is the first time that our announcement has appeared in Harper's Weekly. You have doubtless followed our extensive advertising campaign, however, in other periodicals during the past year.

If so, you've doubtless observed that we avoid the platitudes and generalities of the average automobile advertiser and stick squarely to the question of mechanical efficiency.

Why is this?

Because the valveless two-cycle Elmore motor is so infinitely superior in results, because it is so far advanced over all other makes, that it is impossible to make you realize it except through demonstration.

The object of our persistency, therefore—the reason for the continuous harping upon its unique and marvelous efficiency—is merely to bring you to the point of getting a demonstration.

When we say that all other motors give you intermittent power while the valveless two-cycle Elmore gives you continuous power, you may be momentarily impressed.

But not until you have ridden in the Elmore will you understand that this represents a difference in results which will make you, after a single ride, choose the Elmore in preference to any four-cycle car built at any price.

No words of ours can possibly convey to you the sensation of amazement and delight you will experience in

the marvelous efficiency of this motor which has no valves—this motor which gives you an impulse from each cylinder every time the main-shaft turns.

No Elmore agent can tell you about it—especially can no man who has never owned or sold or ridden in any but four-cycle cars tell you anything about it.

The difference, you see, is so marked, so radical, so delightful, that it can't be put into words.

One four-cycle car you know to be very much like another—but here is a car which develops in the first ride advantages and luxuries of operation which you've never experienced in any four-cycle car.

One ride will make you an Elmore enthusiast. That's why we talk continuously about the motor.

That's why we say: "Design, finish, upholstery? You can see how perfect they are at a glance. It's the valveless two-cycle motor that counts."

A demonstration in two or three four-cycle cars of different makes may leave you still undecided.

A demonstration in a valveless two-cycle Elmore will prove a discovery, a revelation. For your own enlightenment, therefore, manage as soon as you can to get a thorough, drastic demonstration of the valveless two-cycle Elmore on country roads, high hills, and crowded city streets. Meanwhile, write for the booklet—"Our Daily Mail."

NOVELS FOR SUMMER READING

The Cruise of the "Shining Light"

By Norman Duncan

"Nicholas Top is a character the Dickens and Stevenson might have envied. He will take his place as one of the most likable 'damned rooks' in modern fiction."—N. Y. Globe.

"No modern novel has so gripped me in years. If readers of fiction have not lost a taste for 'style' in writing poetry in description, and lifelike characterization, *The Cruise of the 'Shining Light'* should take rank as one of the finest novels of recent years."—Bliss C. Shelley, Literary Editor, Boston Herald.

The Mystics

By Katherine Cecil Thurston

In this new novel the author of *The Masquerader* discloses a strange and almost medieval situation in the heart of London to-day. Its unrelaxing becomes convincingly real as scene follows scene with the same persistent excitement and dramatic suspense which marked *The Masquerader*.

Stolen Treasure

By Howard Pyle

Buccaneers and pirates, brave men, good and bad, move across these exciting pages. One follows these daring adventures with a return of youthful enjoyment in thrilling exploits on the high seas and in the struggle for yellow gold. The volume is beautifully illustrated by the author.

To the Credit of the Sea

By Lawrence Mott

A book full of the sweep and zest of the sea. It is startlingly real in the dramatic scenes it presents as the lives of the brave fishermen of the "Banks" and Labrador coast. The heroism, daring, and self-sacrifice which make up so large a part of their careers are splendidly portrayed.

COMMENT

Are Bryan and Defeat Inevitable?

There has been a curious feature of the unanimity of Democrats for Mr. BRYAN; he has been the open choice of those who do not believe that he can be elected. Some remarkable letters to the newspapers, and some significant editorials in important journals, reveal the existence of this heretofore unheard-of political anæmia, and also indicate signs of an awakening. Hopeless and lacking in power to devise a way to escape the inevitable, some Democrats of the West and South have been sighing that Mr. BRYAN will be nominated. This has been saddening, but it is having its effect; assisted by growing conditions in the Republican party, it has been reacting. Here and there the political dependents are raising their heads to inquire, "Why throw away an opportunity?" In an illuminating letter to the *New York Sun* from Charlottesville, Virginia, there was a note of deep despair. The writer declared that "the astonishing feature of the political situation . . . is the almost unanimous acceptance of BRYAN as the Democratic candidate, coupled with an utter dearth of enthusiasm, if not of interest, in respect of the man himself." Stagnation is accepted here as inevitable, and the Democrats of Virginia seemed to be willing to take this kind of peace, "even if we have to seek it in the grave of hope and manhood." A few days later, the *Sun* published a letter from Richmond. Its tone was different. It was clear that some Democratic leaders had already become weary of stagnation, and had been aroused by the new presentation of their condition in such utterances as that from Charlottesville. In this later letter we were told that the "old hopeless complaint, 'What's the use?' appears to have been rejected here as a feeble and unmanly pretext for surrender." And then we hear that the Democrats of power in Virginia have made up their minds to make a real contest for the Presidency, and to refuse to go to certain defeat under the leadership of Mr. BRYAN. "It is safe to assume," says this writer, "that this resolution will find favor throughout Virginia as the days go by. It is equally safe to assume that as the BRYAN blight is lifted from their brows they will come to a clearer perception of the South's right to dictate to the national Democracy as regards both men and principles."

Why Throw Away the Opportunity?

Other evidences of this awakening spirit are crowding in upon us. The *Charlotte Observer* asserts that the South has lost its nerve, "otherwise it would not consent to be led by the nose by Mr. Bryan to a third defeat under his crazy-quilt banner, but would assert its rights by insisting upon the nomination for President of a Southern man, who, if elected, would at least have his party organized and on fighting-ground instead of demoralized and dispirited, as is

the promise of the present." A correspondent of the *New York Times*, among many other writers, has been giving voice to the sentiment that not only the South, but Democrats everywhere, should be rising up against the oppressive weight of the BRYAN incubus, and begin to look about them for a candidate who will lead a real opposition to the Republican party. It is evident to all close observers that an opportunity has arrived, and Why throw it away? That is the question which Democrats must ask themselves, and if they are to deserve well of the country they must make an intelligent reply.

Bryan Means Defeat

That BRYAN's nomination means Democratic defeat for the third time is more than an impression; it is a certainty. Mr. BRYAN is not only burdened with the despairing conviction of many men who will, or who might, vote for him, that he is foredoomed to defeat. To many of these he lives under an evil star, and they will look upon their votes in advance as wasted. They will be easily persuaded to stay at home on election day. He has represented an issue in his two disastrous campaigns. This issue, on which he went to defeat, nevertheless, brought him some strength, as it lost him other and most valuable support. He no longer has that issue, and while he cannot hold all that came to him in 1896 and in 1900, he cannot regain more than a trifling percentage of those Democrats who declined to support him in 1900. As the *New York World* says of Mr. BRYAN as a candidate, and of suggestions of efforts to help him to campaign funds: "But a campaign fund alone will not do. There must be votes. Where are they to be sought? What policies are to win them? Who is to lead the way?" If Mr. BRYAN undertakes to lead, the way will be down the same old blind alley to the familiar stone wall against which the Democratic party has battered its head in two fatal efforts to reach the goal. Mr. BRYAN's silver issue is dead, and while he does not quite know this, the country knows it, and is aware, too, that he did not display good judgment when he made it the central feature of his campaigns. His new gods are government ownership and the referendum and initiative. Neither of these has attracted the country, and, more than that, on the first display of each he lost some valuable strength which had come to him in the hope that from his experiences he had learned something. He is distinctly weaker than he was in 1896 and in 1900, and he is weaker than he was before he made his first speech after his return to this country. As a destroyer of the States and the establisher of an arbitrary paternal Federal government, there is no reason why the country should prefer Mr. BRYAN to Mr. ROOSEVELT or his candidate, and it will not. If it desires something different from present policies continued by the same or by another hand, it would be folly to change to Mr. BRYAN. The opportunity of the Democrats is for a change of policies, and especially for the reestablishment of the reign of law. It is because some Democrats are beginning to see their opportunities that they are looking about for other candidates.

John W. Daniel, of Virginia

The list of Democrats who are under discussion as possible candidates for President is increased by the addition of the name of JOHN W. DANIEL, of Virginia. The movement away from the BRYAN fetter is indicated by the tendency of men who have been inclined to assume BRYAN as a matter of course towards freedom of mind. To think that some one would make a better candidate is very likely to result in finding some who will be thought actually better. Now we have the South, too, truly entering upon its just rights, for not only has it the right to suggest one of its own citizens as a candidate, but any one who would criticise its suggestion for the reason that its candidate is a Southern man would show himself lacking in patriotism. Now we have, then, suggested for Democratic candidates men from all sections of the country: Governor JOHNSON, Mr. BRYAN, and ex-Vice-President STEVENSON from the West; Senators CYLINDERSON and BAILEY and DANIEL from the South; ex-Archbishop-General HAMMON from Ohio; Judge GRAY from Delaware; ex-Governor DOUGLAS from Massachusetts; and Woodrow Wilson from New Jersey. Here is a goodly list, and Senator DANIEL ought to be welcome to it. He has some qualities which may commend him to those who have been

thinking seriously of another Southerner. Among these candidates there are some who may very sensibly be assumed to possess the qualities and the principles that will attract votes in 1908, qualities that Mr. BAYAN lacks, and principles upon which he has turned his back.

Reform the Tariff

More and more plainly the Republicans are pointing out their opportunity to the Democrats. Speaker JOSEPH G. CANNON may not be much of a statesman, but he is a representative of the Republicans who control their party in these Western States where the demand for revision of the tariff is strongest. The Republicans of Illinois have recently named him as their candidate for President, and Mr. HARRIS, one of the Senators from that State, enjoying a glimpse of its feeling, hastened to announce that Mr. CANNON was not as much of a "stagnant-potter" as he has been represented to be. Mr. CANNON, on his part, hurries out a denial of this unkind attempt to set him right, and insists that there shall be no attempt at tariff revision as long as he can help it. Mr. CANNON has not been celebrated as a tariff expert, or as an expert on any subject where either large or accurate information is required; all that he knows on this subject is that many votes have been got on the tariff issue heretofore, and he believes that it is good politics to hold on to a vote-getting play until popular interest in it seems to be flagging or actual hostility to it seems to have sprung up. Mr. CANNON knows, he says, that the Sixtieth Congress was elected on the theory that the country was content to "let well enough alone," and he sees no reason to drop "that winning card," therefore he declines to consent to any movement to change the Dingley law in any respect. This is not the attitude of all Republican politicians; but it has been, and is still, the attitude of those who have the management of the party and the government, and among them is included the President. They have no thought of changing the tariff law; but if they find themselves compelled to revise, they favor a revision that will be more seeming than real, one that will not relieve the consumer at too great a cost to the beneficiary.

Mr. Van Cleave's Suggestion

PRESIDENT VAN CLEAVE, of the National Association of Manufacturers, also emphasizes the opportunity. He sees that revision must come, and he desires his friends of the Republican party to bend before the storm, so that they may remain in power and attend to the revising themselves. He mildly says that the time has come for revising the tariff schedules. He would do no harm to high duties, but he would lower some of them. To this end he suggests that the Republican party, at its coming convention, declare in favor of a tariff revision at an extra session to be called immediately after March 4, 1908, and the appointment by the President of a non-partisan commission with Congressional authorization (why?) to frame a report on which revision could be based. We tried a tariff commission in 1883, we may say, incidentally. Its report was a moderate affair, and some sensible changes were suggested by it; but Congress tore it to pieces, and sent its disagreements to a conference committee, from which, in the last hours of the session, came a bill more protective and more beneficial to certain favored interests than any law we had then had. It was passed unread and misunderstood. But here we have the purpose of the politicians who now control the government, and the intent of those who control the politicians. This is the way the Republicans expect to take away the opportunity; how will the Democrats avail themselves of it?

Mr. Roosevelt's Abuse of Patronage

The reports from Washington concerning Mr. ROOSEVELT's "pernicious activity" in Ohio in behalf of Mr. TART continue to be disturbing. A letter to the editor from a citizen of Ohio, not a FORAKER man, so he declares, supplementing more than one recent Washington despatch, says that all intelligent men in Ohio have known for two months that "all of the power, patronage, and personal and political influence of the President is being used to nominate the candidate he has selected for President. Every government official in Ohio," he continues, "has had his instruction to line up and vote for TART. Every bit of Federal patronage is being manipulated

to this same end. The Senators are not permitted to make appointments—their recommendations are thrown in the wastebasket," etc., etc., etc. The *New York Times* judiciously points out that this neglect of the Senators may possibly lead to some improvement in time. Mr. ROOSEVELT's oft-announced purpose has been to consult Senators on the subject of appointments, and if he is now willing to ignore the Senators in order to use the Federal patronage for the man whom he has picked out to be his successor he may come insensibly to ignore Senators in order to increase the efficiency of the public service. Some will say, and they may support their assertion with reasonable argument, that herein is revealed Mr. ROOSEVELT's real attitude towards the civil service; that he has employed all that important part of the offices not protected, or "covered," as they say, by the civil-service law to promote the interests of the party organization, and his plan of consulting Senators is evidence of this; that the Senators may safely be trusted to consult the welfare of the organization—their organization—in making recommendations; that now, in Ohio, Mr. ROOSEVELT is not departing from his true policy, but has abandoned the Senators because they and their organization will not support his man, and is simply employing the patronage in the State himself for the purpose for which he desired the Senators to employ it. Whether this criticism is just or not, it cannot be denied that it has been invited, and that, admitting Mr. ROOSEVELT's past devotion and services to the cause of reform which he has so long championed, he seems to be doing all in his power to destroy it by his treatment of the Ohio offices as personal spoils.

Obnoxious Forces for Taft

It may not do Mr. TART much harm, but the fact is interesting that a good many obnoxious forces in Ohio have been enlisted in his behalf. Brother CHARLES is himself not highly respected by the good citizens of Cincinnati. The letter from which we have already quoted declares that for weeks efforts, presumably successful, have been made to "secure the support of the Cox organization." Cox, the writer says, "is the man whom Secretary TART declared, a year ago last fall, was not fit to associate with politically, and whose defeat and elimination from politics he publicly urged. If Governor HUGHES and Tammany were to combine for political purposes the conditions would not be dissimilar." These efforts are probably those of CHARLES P. TART, who, heretofore, has been one of the most important allies of Cox. The Secretary has probably no direct knowledge of them, but, as a Presidential candidate, a man cannot be too careful of his company.

Irish Nationalists and British Liberals

It is probably a mistake to assume, as has been assumed by many onlookers, that an irreparable breach has been opened between the British Liberal and the Irish Nationalist members of Parliament by the unqualified and unanimous refusal of the Nationalist convention, held at Dublin, to accept the BIRRELL bill, intended to transfer many administrative functions, now vested in boards appointed by the Viceroy of Ireland, to a central council, partly appointed, but mainly elected, by those Irishmen who possess the parliamentary franchise. There is no doubt that the convention's treatment of the BIRRELL bill should be construed as an announcement that it will tolerate no sort of cooperation between Irish Nationalists and the ROOSEVELT wing of the Liberal party, which in the present cabinet is represented by the Chancellor of the Exchequer, the Minister for Foreign Affairs, and the Minister of War. Under the circumstances, if Premier BANSERMAN's majority were less overwhelming than it is, he would have to dismiss Sir EDWARD GREY, Mr. ASQUITH, and Mr. HALDANE, or lose the support of Mr. JOHN E. RUSSELL and his eighty followers. No such alternative confronts the Prime Minister to-day, but at the next general election, which, in Mr. BANSERMAN's opinion, will take place in 1908, or soon thereafter, Sir H. J. CAMPBELL-BANSERMAN and the other Liberals who are sincere converts to home rule, and who compose the majority of the present ministry, will have to permit the followers of Lord ROOSEVELT to flock by themselves, for the latter cannot possibly control so large a fraction of the electorate as is represented by the Irish vote in British constituencies. Lord ROOSEVELT, Sir EDWARD

GREY, Mr. HALDANE, and Mr. ASQUITH really belong with the Unionists upon every question except that of free trade in broadstuffs. Meanwhile, Irish Nationalists will be expected to distinguish the sheep from the goats by supporting at by elections those Liberal candidates who are known to be staunch home-rulers, and, on the other hand, helping to defeat those of the ROOSEVELT stripe. That would be the only fair deduction to be drawn by Irishmen sitting at Westminster, or voting in Great Britain, from the action of the Dublin Nationalist convention. They ought not to hold Premier BARNESMAN responsible for the BANGAL hall, which notoriously did not conform to his personal wishes, but simply represented the utmost which the Rooseveltites would concede.

Japan and San Francisco Again

Again a slight outburst has alarmed Japan, and caused doubts as to the friendliness of the labor element of the Pacific coast to the Japanese who dwell there. In the course of some rioting a San Francisco mob of street-car strikers made an attack on a Japanese restaurant and bath-house, and destroyed some property. There is no evidence to show whether the first assault was upon property because it belonged to Japanese or simply because it was property. But it seems that the bystanders were roused to active participation by their race prejudices. Immediately there was agitation on the part of the Japanese here and at Tokio. Ambassador AOKI made representations to Secretary Root, and Secretary Root communicated with Governor GILLET. The Japanese government, after listening to some excited remarks by representatives of the populace, exhibited its usual calmness. It is unfortunate that Californians, or indeed the citizens of any State, whether of high or low degree, should so often threaten the good feeling that ought to prevail between this country and other powers with which we have treaty relations, within whose jurisdiction some of our own citizens dwell, and with which we carry on trade.

San Francisco's Critical Condition

But San Francisco has only too much reason to claim indulgence for anything untoward that happens just now within her borders. So far as can be judged from the reports that come East, she is about as near a state of anarchy as a city can be and still keep its shops and banks open. At this writing she has on her hands four strikes—of telephone, laundry, iron, and street-car workers. Of these the street-car strike has been attended with violence and rioting, which the city police under control of DUNAN, an appointee of the recently labor-union Mayor, have made slight effort to suppress. Wages being already higher, and hours of labor shorter, than in any other city, and the work of rebuilding being checked by the extortionate cost of everything, the prevalent feeling is that the present strikes must be fought to a finish. The strikers will arbitrate nothing, and the opinion is held by conservative observers that the strikes have not really been contrived in the interest of wage-earners at all, but have been hatched by the labor-union leaders, whose municipal government is under indictment, as measures of industrial war against all public order. The State administration is said to be the only force that now stands between San Francisco and anarchy. Any day—say to-morrow—may see the State militia put in charge of the city.

Mr. Roosevelt and the Nature Fakirs

The doctors of natural history insist that too many quacks are practising their profession. They want it stopped. The accused quacks say that they are doctors, too, and as well qualified to practise as the other professors. The conflict between them has been raging with especial bitterness lately because of the popularity and prevalence of the writings of adventurers in natural history, whose qualifications the regulars deny. Chief among the regulars is the venerable Joak BRAMMUS. Of less authority, but still of eminence in the same group, is President ROOSEVELT. It grieves these gentlemen and their colleagues to have anybody print, as true, stories about animals and their doings which do not tally with the observations which they have themselves made. The intensity of Mr. BRAMMUS's feelings on the subject was lately remarked in this paper. Mr. ROOSEVELT's convictions about it have been still more recently set forth by Mr. E. B. CLARK

in *Everybody's Magazine*. Mr. CLARK, who seems to have written by authority, represents Mr. ROOSEVELT as deploring the propensity of sundry "nature fakirs" to piece out in their articles a little observation with an altogether scandalous proportion of imagination, and to sell and print the resulting composition as bona fide natural history. Into this wickedness, he says, JACK LONDON and C. G. D. ROBERTS have fallen; but the leading practitioner of it he finds to be W. J. LONS, whose iniquity he finds to be the more insufferable and injurious because some of Mr. LONS's books have come to be used as text-books in schools. It grieves Mr. ROOSEVELT to have the innocent school children fooled by Mr. LONS's sinistrous animal yarns. Mr. LONS, thus assailed, has retorted with pleasant warmth, declaring that President ROOSEVELT is no naturalist, anyhow, but a mere game-killer, who knows much more about dead animals than live ones. Mr. LONS certifies himself to be a careful and patient observer, and a venacious writer, and insists, Mr. R. to the contrary notwithstanding, that what he reports about the habits and achievements of animals is true, every word of it, and fit for the school children to accept.

A Weakness of the Regulars

This is far too violent a squabble for any mellowed laymen to intervene in. The professional animal-men seem to have lined up with President ROOSEVELT and against the romantics. Mr. HORNADAY, of the *Bronx Zoo*, says that "any man who invents strange stories of animals and publishes them for truth is a dangerous citizen" ("undesirable citizen," please, Mr. HORNADAY) and the keepers of the zoos in Washington, Chicago, and Cincinnati are of the same mind. But, after all, it is hard to tell the truth, the whole truth, and nothing but the truth, about man or beast, and it is especially difficult, even with consciences enlisted, to tell it about beast. We believe there are some pretty successful fake nature-writers who practise profitably to interest readers without much concern for the facts of natural history. To assail them is fair game, even though their conduct may seem to their readers less reprehensible than it seems to their rivals. But where Mr. BRAMMUS, Mr. ROOSEVELT, and the rest of the regulars seem apt to trip is in too ready assertion that what some other nature-writer asserts is impossible. The whole truth about any animal nobody can tell. When the results of observation have been recorded the rest is surmise, and generalization must always be more or less hazardous. The habits of various animals are known, but who can measure or predict the variation of individual animals from the observed habits of their species? And who can measure the mind of any living creature, but especially of the higher animals, and be sure that his measurement is right and includes all? The romantics' romance, and no doubt the regulars are justified in being shocked by them; but the regulars have their weakness in their tendency to be too positive that what they have observed is the whole truth, and that everything outside of it is imposture.

Taller Soldiers Wanted

Agreeable to a suggestion from the President, the height requirement for cadets entering West Point has been raised one inch. Under the old rule, sixty-three inches was the minimum height accepted. The new rule makes sixty-four inches the minimum for boys of seventeen, and sixty-five inches the minimum for boys who are eighteen or older. It is reported that the President has long been of the opinion that the officers of the army, as a body, would present a much finer appearance and be capable of more work if they were bigger physically. They might look better, as a body, but it does not follow so readily that they could do more work. It is related in the current number of the *Century Magazine* that when President LINCOLN met SUMNER at City Point, in the spring of 1865, he said to him: "General SUMNER, when this peculiar war began I thought a cavalryman should be at least six feet four high, but I have changed my mind. Five feet four will do at a pinch." "SUMNER," says Mr. BUTTS, who tells the story, "measured five feet four and a half." That is not enough to get an eighteen-year-old boy into West Point under the new regulation. So the republic has cause to be thankful that SUMNER shipped in when he did.

American Women at Men's Work

MARRIED women, of course, have always done their share of the world's work. Indeed, it is open to argument whether they have not done more than their fair share of it. It is doubtless true that if upon men, as we now know them, were suddenly devolved the burdens of child-bearing and child-rearing, to say nothing of the cares of the household, families would be considerably smaller than they now are. It is certain that married women, who have discharged the duties of maternity, have never been "supported" by men in any just sense of the word "support." Nay, if all men, married and single, were to labor every hour of the day, they could not do all the work of the world. A few worthless men, married or single, there may be, but even they are not so much supported by the men of their families as by the overwork of the "separated" women at the other end of the social ladder. From creation's dawn women have performed their full quota of the world's work; and usually they have not been paid for it. Unpaid work, however, seldom commands respect. It is the paid female worker who has brought home to the public mind conviction of woman's worth in the world's economy. The spinning and weaving done by our great-grandmothers and by their great-grandmothers in their respective houses were not reckoned as a contribution to a nation's wealth until the work was transferred to factories and there organized; to factories, where the women who pursued a particular calling were remunerated according to the commercial value of their products. It is undoubtedly the women of the industrial class, the wage-earners, reckoned no longer by units, but by hundreds of thousands, the women whose work has been submitted to a money test, that have been the means of bringing about the altered attitude of public opinion toward woman's work in every sphere of life.

From this point of view a singular interest attaches to the report recently issued by the Census Bureau, which sets forth some isolated statistics regarding the number of feminine wage-earners found by the census enumerators seven years ago in occupations formerly regarded as exclusively suited to men. The number of women, indeed, engaged in agriculture and the rougher kinds of labor is small in the United States, as compared with the number relegated to such toil in parts of Continental Europe. Nevertheless, the statistics now put forward show that in 1900 there were no fewer than 150,000 women farmers and farm laborers in this country; indeed, there were more of these by 110,000 than there were who pursued the relatively feminine occupation of dressmaking. It will surprise many persons who look upon the female sex as by comparison physically feeble to learn that there were 185 women engaged in blacksmithing and 508 as "machinists." Indeed, there were eight employed in boiler-making, than which no occupation imposes a greater strain upon the muscular system. Forty-five women were classified in 1900 as locomotive engineers and firemen; thirty-one as brakemen, and ten as baggage-men on railways. Many more were seen as carpenters and millwrights and flagmen. There were even six women ship-carpenters and two ship-roaders. Indeed, one or more women had learned all of the 303 occupations once monopolized by male breadwinners—except nine. Among the very few callings yet exempt from feminine competition were those of United States soldiers, marines, and sailors, members of city fire departments, or of the "line-man" department of telegraph or telephone companies.

The data collected in 1900, and now for the first time published, show that of 22,653,000 women over sixteen years of age, more than one-fifth, or upward of 4,535,000, were breadwinners, of whom only 1,124,000 were domestic servants. The proportion of feminine white wage-earners, both of whose parents were born in this country, was less than fifteen per cent. The proportion of white women paid workers, one or both of whose parents were native-born, was thirty-seven per cent. The native white women workers, both of whose parents were born abroad, represented more than twenty-five per cent.; the white women workers who themselves were foreign-born, more than seventeen per cent.; the negro native-born women, twenty-two per cent. As compared with the year of 1890, the number of women breadwinners in 1900 had increased by more than one hundred per cent., an increase which obviously can be only partially ascribed to the expansion of population during the two intervening decades. Obviously, the number of occupations open to women had been augmented significantly during the interval. There is no evidence that the remarkable extension in the number of women wage-earners has been attended by any decrease in the number of marriages, or by any sexual deterioration. From the viewpoint of the political economist, however, it is to be regretted that the reason-takers of 1900 throw no light upon the proportion of women wage-earners who, on the one hand, support not only themselves but others, or those who, on the other hand, are partially indebted to men for their own support. Those who pertain to the latter category obviously subject the members of their sex belonging in the former, and also their masculine competitors, to unfair competition, and are partly responsible for the tendency to pay women somewhat less than men for performing the same kind of work. We say partly, because there is no doubt that a chief cause of the difference in respect of remuneration is

the fact that in all States of the Union, except four, women do not possess the full franchise, and, therefore, are unable to make good on the ballot-box their claims to equal compensation for equally good work.

As has often been pointed out by advocates of woman suffrage, no one needs all the powers of the fullest citizenship more urgently than does the wage-earning woman. It is unquestionably true that the wages paid to any body of working-people are determined by the political influence of the body of workers in question. Prieters, for example, by their intelligence, their powerful organization, their solidarity and habit of collective action, have managed to keep up their wages in spite of the invasion of their domain by new and improved machinery. If, however, by some untoward fate, the prieters should suddenly find themselves disfranchised, placed in a position wherein their numbers found themselves politically inferior to the numbers of other trades, no efforts of their own, in the absence of complete enfranchisement, could restore to them the standing in the esteem of their fellow craftsmen and the public at large which they now enjoy, and which materially reinforces their demand for high wages. In the garment-making trades, on the other hand, the presence of a large body of the disfranchised, of the weak, the young, and the unintelligent, undoubtedly contributes to the economic disabilities of these crafts. Custom, habit, tradition, the public esteem in which the people performing certain kinds of labor are held, help to determine the prices of that labor, and no disfranchised class of workers can permanently hold its own in competition with enfranchised rivals. The lack of the ballot places the wage-earning woman at a serious disadvantage, as compared with her enfranchised fellow working man in the same vocation. By the impairment of her standing in the community, the general rating of her value as a human being, and, consequently, as a worker, is lowered. As things are now, in order to be rated as valuable as is an efficient man in the field of her earnings, she must show herself not merely as less efficient than he, but more efficient. She must be sturdier, or more trustworthy, or more skilled, or cheaper than he, in order to have the same chance of employment at a given rate. Thus, when women are accused of lowering wages in certain callings, they may justly reply that it is only by conceding something from the pay which they deserve and would gladly claim, that they can hold their own in the labor-market, subjected, as at present they are, to the disability of disfranchisement.

Men workers are beginning in these days to discover, however, that it is by no means beneficial to them that their women fellow craftsmen should labor under such a disability. Experience has taught them that it is fatal for any body of workers to have forever hanging from the fringes of its skirts other bodies occupying a level just below its own; for this state of things means continual pressure downward; an additional obstruction to be overcome in the struggle to maintain reasonable rates of wages. Hence, within the last two generations there has been a complete revolution in the attitude of labor-unions toward the women working in their trades. Forty years ago women might have knuckled in vain at the doors of the most enlightened labor-unions, whereas to-day, not only in England, but in the United States and France, the federations of labor keep in the field paid organizers whose duty it is to enroll in the unions as many women workers as possible. Working men, in a word, have come to learn that women are in the field of industry to stay, and now, also, they realize that there cannot be two standards of work and wages, one masculine, the other feminine, for any trade without constant menace to the highest standard. Hence their willingness, if not eagerness—as yet male school-teachers are not eager, but logically they should be—to place women coworkers on the same industrial level with themselves in order that all may pull together in the effort to bring about reasonable conditions of life.

The Retreat

THERE are a great many ways of dividing folk into two classes. There was once a learned old man who used to say he always divided people into those who were built by their temperaments and those who bullied their temperaments. They may quite easily be distinguished as those who live with things and those who live with ideas. Mr. A. C. HENSON says he divides them into those who, when they are walking alone along a country road and see a crowd of people in a field all looking toward the central point with their backs turned, would rush up and look too, and those who would hurriedly turn away and go in an opposite direction; in short, into those who love a crowd and those who love solitude. Still another classification is to divide folk into those who know themselves, and those who have but the dimmest or most distorted reflection of themselves in their own minds. All these fundamental distinctions depend upon the self-knowledge and care that are furnished upon the retreat,—the place wherein one can enter, where they live alone, and meet and get acquainted with their own souls. The folk who get acquainted with themselves are the same ones who bully their temperaments, who know the superlative value of ideas and

the comparative uselessness of things, who are free of idle curiosity and aimless gregariousness; who have, indeed, so ordered the retreat that it is a possible and pleasant place to dwell in.

It was the incomparable emperor himself, the best of all authorities, who told us that to rush about seeking a retreat in the mountains, in country-houses, and by the seashore was the mark of the romantic man, and that it was always in our power to retreat within ourselves; for nowhere, either with more quiet or more freedom from care, does a man retire than into his own soul, particularly when he has within him such thoughts as bring him tranquillity. "And I affirm," says the great one, "that tranquillity is nothing else than the good ordering of the mind." The beginning of knowing ourselves, especially if we begin late in life, is like to be a painful process; if, by happy hazard, we escape meeting a sinful person, we are still very apt to meet a vain or an egotistical person or a flippant pleasure-seeker, and none such are good for the close intimacies of constant communion. Those religious faiths that taught self-examination and confession as a part of purgative had this element of good, that they aimed at introducing a man to himself; and any sincere and sinful person could procure the acquaintance, could learn to make the retreat into himself not only a possible and bearable matter, but ultimately what it was intended to be, a refuge from the casualties and storms of life. There one may take stock of one's capacities and choose what to develop, sift one's interest, and know which to pursue in order to gain the tranquillity which in the great Emperor seemed to be unshakable. There one grows to understand that by the multiplicity of our perceptions are our feelings and relations enlarged. There is no harm in having on absorbed interest in bonnets, but if one adds thereto an absorbed interest in the courses of the stars one gains a certain peacefulness of disposition which bonnets, unintended, cannot give. It may seem a *non sequitur*, but in reality a knowledge of flowers and their ways and habits, a chosen love of their beauty, will do more than arm one to combat in high temper; a knowledge of poetry banishes fear, and a taste for metaphysics endows us with tolerance. To meet ourselves alone and to get acquainted is to take stock of our perceptions and interests, and to enlarge and improve them in whatever way we find necessary to make ourselves agreeable and improving companions. To find that a large part of our unconscious mental energy is spent in idle wishing for money or fame or accessories is a grievous matter, for we are well aware that a time will come when to have owned Lambeth Palace or to have walked past it daily will be one and the same thing, and that the only matter of import will be the kind of a spirit that owned or walked.

"Behold," says MONTAIGNE, "what it is to choose treasures well; to hide them in a place where no man may enter, and which cannot be betrayed but by ourselves; altogether one's own, and wholly free, wherein we may hoard up and establish our true liberty, there to discourse and meditate and laugh . . . having a mind moving and turning in itself; it may keep his company; it hath wherewith to offend and defend, wherewith to receive and wherewith to give."

The refuge has two dangers, none the less; the danger of being a place for idleness, and the danger of admitting us for our fuller life with men. That is no solitude which is given to idle dreams of what we might be among men but are not; the kind of dreaming which ends in dreary, blank despair because we cannot stand the comparison between the dream and the reality. That points to an acquaintance with ourselves as futile and feeble as the most superficial of outside relations, where we indulge in air-castles founded upon no firm basis of actual truth. We must face ourselves as we are before we can add one jot to our spiritual stature. That solitude, too, has dangers which lead us to shun men. Out of a full and wholesome knowledge of ourselves must grow deeper and stronger relations to other men. No one of this day had a fuller solitude, a safer and sippier refuge, than WALT WHITMAN, and no one has recorded profounder feelings for his kind and truer nearness to all other men. It would almost seem that no two people can stand near each other without hurt unless the ideal stand between, unless they emerge enriched and uplifted from the retreat.

Personal and Pertinent

How do some lawyers pass their law? One of a class is now doing time on Blackwell's Island, and without him especially in mind, but dealing with his kind, a little tale that was told on the day of his troubled journey to prison will throw some light on some lawyers whom the courts permit to practice. A distinguished member of the profession of the right kind was journeying from New York to Albany to argue a case before the Court of Appeals. According to the fashion of his antique day, he wore on his bosom a diamond of the kind known to the world as a "headlight." As he slept peacefully in his chair in the car, a man stumbled upon him. When he roused Albany his pin was gone. He was an eloquent advocate, and had often been retained by the lawyers of the State to defend his paying criminals, and he had become wise. He wrote to his son, afterwards a judge, but who was then being

made wise, the circumstances of the case, adding: "If you consult our friends — and —, perhaps they may throw light on the matter." In a few days after rousing up their clients, — and — returned the "headlight."

Mrs. McKINLEY, to whom Death came, a welcome visitor, on May 20, lived many years in Washington, the best of them being passed in happy obscurity as the wife of a Representative in Congress; especially happy were they when WILLIAM McKINLEY was a rising man, when he was gaining his place. Her life was a physical illustration of the difference between anticipation and realization. In those early days at the Elliott House the two were members of a little circle of people, political and military—for the Elliott House was always the abode of army and navy officers who were visiting the capital—and the circle seemed very bright to their friends and to themselves. Mrs. McKINLEY was a pretty woman then, and of quiet tastes. She sometimes went up to the Capitol at the close of a day to walk back with her husband. The social antics of Washington had no especial pleasure for her. She was content with the hotel life, or that part of it which was here, and she never gave any sign of being diverted, with the others, by the social imitations which taint the real life of Washington hotels with small comedy. Of course she joined with the other women in being "at home" on the hotel's "day," but she gave no sign of being impressed with the solemn importance of the funny function. She was as wholesome and serene as she was, probably, at Canton when WILLIAM was presiding at the business of lawyer. As he rose in importance, she fell off in health, and when the husband had attained distinction, she was a hopeless invalid. Then she sometimes evoked to the supposed demands upon her, and sought to play the part that she remembered, in a dim way, to have been assumed by the wives of political personages when she was a quiet and happy domestic leader at an American hotel. She made her effort bravely, but she suffered sadly for it, but her husband never seemed to know that she was not having it with the best. His devotion to her through the long years that followed has been part of the best-known current history of our day. As he rose higher in public life she continued to decline, and for five years at the last she was deprived of his affectionate solicitude and attention.

UNITED STATES CIRCUIT-JUDGE WALLACE had a good many people at his dinner, and he was worthy of the occasion of the good-bye to the judge and of the welcome back to the bar. He is a lawyer of what men are inclined to call the "old school," the members of which may be found among the best of our moderns, and even among our youngest lawyers. This means that they regard their profession as owing a high duty to society and to the state; that they reverence the law, seek justice, and live closely lives. The rendering of their profession brings them among the books of government, the history of the lives of men who have laid up the rules which embody the principles of civil liberty, and gives their minds a flavor of varied learning. Their respect for the law, for their own positions as the interpreters, the administrators, and the defenders of the law, makes them jealous for the independence of the judiciary, and Judge WALLACE has earned much repute and honor that will be very sweet to him through all his life, by reason of the integrity and courage with which he has guarded the shrine of which he has, for many years, been one of the high priests. The executive power has had no terrors for him, nor has the legislative power, nor has any power held command over him, to sway him one way or the other, except the power of the law.

For the rest, he is an agreeable man who has a wide interest in those acts which employ men's minds and in men themselves. He has a pleasant home in Syracuse, with amiable neighbors, among whom have been some of the most eminent lawyers of the State. He was appointed when Mr. CONKLING was a chief power in the State, and probably on his recommendation or with his august consent. At any rate, he has not been CONKLINGED, or any President or any party's, or anybody's judge, but he has conducted himself as an honest judge should, with full intent to administer the law, and with due courtesy. It is said of him by one of his friends that he intended on his retirement from the bench to live the pleasures of the traveler, and, in advance of the time, and perhaps to try on the proposed new novelty, he took a cruise among our Southern waters. It was enough. The living was too difficult. The long judge found that his mind was too active for idling among the purple isles and dabbling in the amber seas, and a tempting offer of a partnership opened his eyes to the pleasing fact that he was not too old to continue to obey the behests of his stern mistress, the law. The firm of which he is to be the head is older than the judge himself will ever be, and it has recently been sadly weakened by the quickly succeeding deaths of three partners. It is the firm one of whose heads old lawyers will remember as HIRSH BARNEY, a strong political leader, and once Collector of the Port of New York, but better remembered, much better, in WILLIAM ALLEN BUTLER, a distinguished, as he was an able, lawyer, but known of the multitude as the author of "Nothing to Worry."

Correspondence

LITERARY COMPARISONS

To the Editor of *Harper's Weekly*:

SIR,—When those in authority utter verdicts, it doubtless becomes those in the lower ranks of life and knowledge to keep violently silent, and yet there are instances when to do so requires more than human self-expression. The learned English ambassador with us has not in the least assuaged the air and called on barbarians as did MATTHEW ARNOLD, nor has he shrugged his shoulders at us as did Mr. YEATS; but he has gravely asked us about our poets, and the New York Sunday Times for May 5 has brought forth an alarming budget of authorities to emphasize the truly American attitude, and to tell Mr. BYRCE that if his hand has tossed BROWNING, SWINBURNE, Tennyson, WILLIAM WATSON, FRANCIS THOMPSON, and WILLIAM BUTLER YEATS, we have had all sorts of THOMAS, HOWARD, THOMAS, and so on, who are just as good. "What," says the greatest American authority—"what better sustained poem have we had for thirty years past than AMELIE RYVES'S 'Solent'?" We are in no position to dispute with our elders and betters, but, standing under correction and in utmost humility of spirit, we should like to make a very low and say that we, in our rashness and ignorance, would suggest that "Tristram of Lyonesse," published in 1862, and therefore within the thirty years, was a better sustained poem.

We are told that Mr. GEORGE K. WOODBURY has his best years ahead of him, and are led to believe that he may at any moment blase forth and extinguish BROWNING. But if the biographical dictionaries speak the truth, Mr. WOODBURY is past the half-century mark—an age when the poet usually dies in *mea*, and leaves a more discursive and philosophical temper of mind than suits the ecstatic rapture of poetry. It is an age at which Mr. BROWNING had "Men and Women," "The Dramatic Lyrics," "Dramatic Romances," "Dramatic Personae," and a part of the "Ring and the Book," therefore the best of his work, behind him. We hear from another authority that a play called "The Three of Us" has given hearts and diamonds to MARLOWE, WYNDHAM, SHAKESPEARE, GOETHE, SCHILLER, and the rest, and lends them easily. We, who have never heard or seen the new wonder, who had never even heard of it until we met this amazing announcement, can but put our hands over our mouths and say, like Joe, "I should I am vile; how shall I answer thee?"

Another authority tells us that Mr. ALDRICH possessed a poetic vein as authentic as that of Mr. SWINBURNE. But what has that to do with the poet? A pebble is as authentic a piece of earth as a rocky mountain, and an andiron is as authentic in its brightness as a star, and no ink-pot is as authentically black as a midnight sky, but why draw comparisons? What does it mean? That Mr. ALDRICH was a great and a stirring influence like SWINBURNE? Perhaps; but if so, the pebble is every whit as good as the mountain, and the andiron as the star, and the ink-pot as the midnight sky. Perhaps one thing is just as good as another, anyhow, and that is what we are led to believe by the publication of such interviews as these: "It is all good," as a jovial stable-boy used to say when clearing out the stable was particularly unclean—"it's all good if you happen to like it."

This attitude would doubtless have pleased our one great writer of original impulse and force who theoretically believed in liking what Mr. Kipling called "the whole blooming show." Although when it came to literature our poet sang consistency and theory to the winds and said, "Do you rail that perpetual, pictorial, post-pot war American art, American drama, laid, verse?" "The Three of Us," however, had not yet been published, nor had AMELIE RYVES'S "Solent." What our great, brave poet yearned for was the breath-compassionate of some heroic life, and a new-founded literature not to amuse or divert or kill time with, but merely to reflect existing surfaces, or ponder to the taste of ignorance and nonchalance, let a literature "underlying life, religious consistent with science, handling the elements and forces with competent power, tracking and training new—and, as perhaps the most precious of its results, achieving the redemption of woman out of those incredible holds and webs of silliness, silliness, and every kind of dyspeptic depletion."

Perhaps "Solent" and "The Three of Us" will do this. Who says? If *Solent* seemed to some a rather ill-disciplined little Virginia girl who talked back in her elders and stirred with what ever came along in masculine attire, and that the abed thing in the whole book was a crown made out of jomille and stars—at any rate, an excellent reform in millinery—that must have been some personal favor in the reader. The great literature, according to the authorities, is with us. The English ambassador need not ask us who are our poets who are stirring up our hearts, or if our hearts are stirred at all. He has been answered—AMELIE RYVES and Mr. WOODBURY are stirring our hearts. So is "The Three of Us." Hold your breath, Mr. BYRCE, and await the heroic result.

We are, sir,

DIVERS READERS.

THE TEACHING OF ENGLISH

To the Editor of *Harper's Weekly*:

SIR,—The publication from time to time of specimen mistakes in English and of the grotesque expressions so often found in college entrance papers leads many people, very naturally, to the conclusion that secondary training must be lamentably wanting in the prime essentials of the uses of our own language. In fact, in a recent issue of *Harper's Weekly*, extracts are given from "A Report on the Examinations for Admission to Harvard College," with the comment that the secret is out, "'Prep' School is the place!" Now the really amazing part of this is the statement also in the article in question that "most young men who apply for employment as reporters or editors are graduates of colleges or universities, etc." (we may very peremptorily ask, it strikes me, "How in the world were such wretchedly prepared candidates ever allowed to enter college, when offering such a 'Martyrdom of English,' and still further, 'How is the fact to be reconciled that after such entrance a period of four years' training, in most cases, has been bestowed on the youth by the college or university with such results?")

This is only one of the variations that one may play on this theme. There are two others which to-day stand out most emphatically as one considers this all-important problem. The first is the "examining" system now so generally and so gratuitously employed by those who are able to afford the expense. I believe that the multiplication of examining schools, existing for the most part during the summer months, is largely superfluous for the purpose of the very thing most needed in our boys.

The mere act of getting into college, often by scarcely the slightest margin, does not imply that a lad is able to handle the fundamentals of his own language to the satisfaction of any one, himself included. One sometimes is forced to believe that requirements in spelling, handwriting, reading aloud, and expression should be among the very first requirements for admission to a college or university. These, with a proper medium of Latin and in some cases Greek in homoeopathic doses, would, in my opinion, do away with such exhibitions as the one recorded in "Extracts from college papers."

There is little use, it would seem, in universities or anywhere else, of course in drama, anthropology, horseshoeing, fæe arts or what not, unless we can get away from the rightful charge that we do not even know how to spell or form a readable English sentence.

The second variation harks back to the days before Secondary School life began.

No much is heard of the wonders of the kindergarten, and no potent are the forces of the government, that one is astonished to find so uninitiated a product as the product of twelve years or so of modern progress to be. Surely something is lacking when possibly a little glibly spoken German or French represents the intellectual training in so many cases. I suspect that in many countries, especially in England, they do these things better than we do, during these invaluable years of our childhood.

A plea for the consistent teaching of children before they are twelve in the rudiments of their mother-tongue language is never out of place. No one, I fancy, can be held responsible for neglect of proper rudimentary training except parents themselves.

The watched care for the health and the happiness of children may well be extended to a proper supervision of their early intellectual progress, thus doing away with the present-day carelessness in this respect.

No doubt, sometime, the royal road to the solution of the "English" problem will be found. Meanwhile, however, it is the duty, manifestly, of all of us, whether we be parents, schools, colleges or universities, to take our proper share of responsibility, and of blame too, and to lend our earnest help towards solving the manifold difficulties of the problem.

I am, sir,

WILLIAM BROWN OLIVERTON,

Head Master Dumfries School.

HELPING THE MONEY-MARKET

CHICAGO, Ill., April 13, 1907

To the Editor of *Harper's Weekly*:

SIR,—Referring to your editorial in the WEEKLY of April 13, 1907, relative to the relief of Wall Street by "The money that Mr. Cortisyon has poured into the market actually belonging there," will you please inform "Constant Reader" if the "aid" referred to would have been necessary if the holders of the stocks had owned them; I mean, furnished the cash for their full value?

I am, sir,

CONSTANT READER.

It is, of course, not true that speculators on margins were the only, or perhaps chief, beneficiaries of the largesse by Mr. Cortisyon from government holdings of the bonds issued by the banks. The speculators increased the demand for money, but it is also true that if the money which had accumulated in the Treasury, by reason of our laws, had returned, after being used for the payment of certain public dues, into circulation, the crisis would have been postponed, perhaps prevented. At any rate, the government would not have been forced to be a party to the tribulations of Wall Street. It is this necessity that the government is thus compelled to interfere, from time to time, in the money-market, that the WEEKLY intended to regret in the editorial comment in question.—EDITOR.

THE TROUBLES AT JAMESTOWN

By WILLIAM INGLIS

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

NEWPORT, Va., May 26, 1907

IT is amusing to observe how many seemingly intelligent persons recently returned from Virginia give themselves the air of the acknowledged wit as they talk about the "Jamestown Exposition." The phrase has such an engaging tang that it tickles the tongue of the speaker and the ear of the hearer, makes each of them feel that he is the real, thorough expert in that sort of thing, a true connoisseur in world's fairs, a trifle surfeited and blasé perhaps, but still the possessor of nice taste and impeccable judgment.

The trifling fact that the phrase is unjust and slanderous need not deter any smart person from using it. Especially when one considers that in the early days of the Exposition there were certain just causes of complaint, which even now have not been altogether removed, though there has been great improvement and the show will soon be complete. But as for "Jamestown"—a trick or deception: a fraud; an imposture," as the dictionary defines the word—that is a ludicrous term to apply to the attractive Exposition at the mouth of the James River.

The governors of the Jamestown Exposition had an opportunity to make a record by completing the show on time. No other national exposition in America has ever been quite ready for the public on the date appointed. The great Chicago World's Fair, commemorating the four-hundredth anniversary of the landing of Columbus, was first postponed from 1902 to 1903—a full year—and then opened about a month after the revised date. The Buffalo and St. Louis expositions were likewise tardy.

So there is really no cause for wonder that the governors of the Jamestown Exposition failed to break the long, unfortunate record.

They did open the show on April 26, the day designated by Congress, but it is a lamentable fact that not three-quarters of the buildings or the exhibits were completely prepared for exhibition by that date.

There has been so much criticism and insinuation of late directed against the management of the Fair that the story of the Exposition shall be herewith impartially set forth, with particular reference to the reasons of delay and to the frightful menace to health and success in the conditions prevailing in the outlying district over which the Exposition authorities

have no jurisdiction. Remedial means are being applied now as a result of the incessant demands of the army authorities. The very officers who were loudest in their denunciation of the conditions that prevailed a fortnight ago now express their belief that the neighborhood of the Exposition will remain as healthy as the Exposition territory itself. And the sanitary condition of the fair grounds is pronounced perfect by competent and unprejudiced authorities.

To compare the state of the Exposition to-day with what it was at the time of the opening is enough to reassure the visitor that all will soon be complete, the last brick laid in the last building, the very latest exhibit promptly displayed, the final touches put on every lot of roadway and promenade. Of course, the Gospeed and Susan Funtast piers, with Discovery Landing between them, will still be unfinished, still a blot on the landscape.

But these great commemorative piers are national work, over which the governors of the Jamestown Exposition have no more control than they have of the tides. They are being built by Federal mechanics, governed by Federal engineers, and it is the material for them, its unsightly freight-cars and ugly heaps, that makes an eyesore of the sea approach to the Exposition which should have been the most beautiful.

And the matter of tardiness in building the piers leads naturally to a view of the first cause of all the delay—the dilatory policy of Congress. When the project was first mooted a decade ago by the late General Fitzhugh Lee, the plan was to commemorate the first landing of white settlers on American soil by an exposition on a modest scale. Year by year the scope of the celebration grew until the burden of financial support became too heavy for the State of

Virginia, which has always been more illustrious than rich.

The State of Virginia nevertheless appropriated \$350,000 for the enterprise, the Jamestown Exposition Company sold \$750,000 worth of its \$1,000,000 capital stock, and the national government contributed \$5,250,000. But this was not enough, and last year application was made to the government for a loan of \$1,000,000, to be secured by a lien on the gate receipts and revenues. It was the delay in obtaining this loan that was primarily responsible for the unfinished state of the Exposition on the opening

The Conditions which Confronted the County Sanitary Officials when they finally undertook to Clean up the Exposition Neighborhood

day. According to Virginians who visited Washington last winter, Speaker Cannon vowed that only over his dead body would Congress appropriate more money for Jamestown. There was a long-continued deadlock. Senators Daniel and Martin had to force the appropriation by including it in the Emergency and Deficiency bill, and it was only the impossibility of defeating the Jamestown appropriation without ruining the entire bill that induced Speaker Cannon to consent to the appropriation. During the struggle much valuable time was lost, and it was only three months ago that the governors of the Jamestown Exposition Company were able to get hold of the loan.

They were now in the midst of their troubles. Instead of emerging from them, for they were delayed not only by the most stormy and backward spring that Virginia has seen in many years, but by numerous strikes among the mechanics and laborers—to say nothing of the awful inertia which overwhelms every man who tries to do any kind of work in the South.

If only the opening could have been deferred until June, the army of 2000 workmen would have had everything in place. But postponement was impossible. The date of the opening, April 26, was unalterably fixed by act of Congress; the National Government had issued its invitations to the governments of Great Britain, France, Germany, Austria, Italy, Japan, etc., to send their navies to Hampton Roads for that particular occasion. It was absolutely impossible to secure one day's delay. An unprejudiced observer cannot but admire the courage and persistence and good humor with which the Virginians have encountered all the obstacles in their way, and made the best of a trying situation.

In spite of all these drawbacks the governors were able to present to the public an Exposition nearly three-quarters finished on the scheduled opening day. In the four weeks that have since elapsed much hard and effective work has been done.

Practically all of the buildings are finished—the chief excep-

tions being the Art Gallery, the Georgia Building, and, curiously enough, the New York State Building. It was rather amusing to a New Yorker who has read in the publications of his beloved native State so much free criticism of the backwardness of the Exposition at present, to find the New York Building very far from completion. Perhaps some day these cheerful critics may present the excuses for the building's unfinished state. In the mean time the impartial observer, looking upon the New York Building, and listening to the New York exhibitions, is constrained to new and sad reflections upon him who sees not the beams in his own eye while still trying to pluck the mote out of his brother's eye.

The governors of the Exposition declare, with great confidence, that the entire installation, with the exception of the government pier and the Negro Building, will be in complete working order by June 10, Georgia Day, when President Roosevelt will again visit the scene. To this observer it seems far more likely that the whole show will be in order by the end of June, no longer needing an apologist, but fit to take its place among the best exhibitions of recent years.

But the governors must be ever ready with the *apex*. The labor problem in the South consists very largely in the business of keeping the black man and brother awake and on the job. For example: there was this morning in Raleigh Court, one of the divisions of the Exposition, a congestion of vehicles which left only a narrow passage clear for traffic. In this space two high-wheeled, small-bodied carts, each drawn by a mule and driven by a negro, came head to head. Neither could advance until one or the other gave way. Each one refused to budge. This dialogue followed:

"No-o-o! You get out mah way!"
 "Gitt out mah way!"
 "No, ah won't."
 "Yes, you will."
 "Won't, nelder. Whah you k'long?"

An open Cesspool under a Fruit-shop, within Twenty Feet of a Well

One of the Mudroom Structures in Pine Beach on the Edge of a Lake of Rain-water

WHERE THE DANGER OF POLLUTED WATER AND BAD SURFACE DRAINAGE MENACED EXPOSITION VISITORS

TWO WAYS OF DISPOSING OF REFUSE

"Jamestown Construction Company."
 "Huh! Jamestown Construction Company, you mean?"
 "No-sir! Jamestown Construction Company!"
 "Jamestown Construction Company."

"For construction—"
 For all I know, those negroes are at it yet. The title of the company was a choice toy for them. They tossed the word back and forth. The black teamsters on the other carts, trucks, and wagons grinned and chuckled as the debate went on. Meantime the work of the Jamestown Construction—or is it Construction, after all!—Company was daily delayed. Scores of instances like this almost seemed to justify the yearnings heard in certain quarters for the Man with a Talk.

It is difficult to be temperate in speech when one considers the dreadfully insanitary conditions that prevailed until a few days ago among the two thousand inhabitants of the little town of Pine Beach, which within a few weeks this spring grew malarial and just outside of the Exposition grounds. All sorts of Coney Island shows, misgiving saloons, and covert halls and queer little shops and stores, such as one would expect to find in the wild and woolly West, are thickly clustered over a little more than a square mile of territory between the main entrance to the Exposition and the Pine Beach pier. Here a horrible state of affairs arose. The people had neither water supply nor sewerage facilities. The result was that the most primitive device for disposing of garbage and all sorts of waste material were maintained side by side with shallow wells hastily driven in the light sandy soil. As long ago as last fall these conditions began to bring results in the shape of attacks of malaria upon the unhappy people of Pine Beach. During the winter a stupor of malaria activity took place, but with the first warmth of spring the mosquitoes reappeared and began to spread the germs, inasmuch as a regiment each of United States infantry, cavalry, and artillery is quartered in close proximity to the Pine Beach settlement. Major-General F. D. Grant, in command of the camp, issued an order early in April giving these directions:

Two Negroes sleeping dawdling over the Task of an Army

The successful Crematory Pit used by the Military Regiments

1. The chief danger expected is malaria, which exists in a malarial form, and is always contracted through mosquitoes. The most extreme means must be taken to guard against them. No one must sleep without having a mosquito bar carefully adjusted, and any soldier violating this rule must be brought to trial before a summary court. Not every mosquito is infected, so that most of the bites are harmless, but it must be remembered that the disease is of slow growth, and that it may be two weeks or more longer after being bitten by an infected mosquito before symptoms develop, and in the mean time the man is a source of great danger to his comrades, some of whom might lose health or life from malaria contracted from him.

2. Typhoid fever is always present in the region, and is generally contracted by eating or drinking uncooked foods which are infected by polluted water, but may also be infected by flies, which carry it from the discharges of the sick. In the early stages or in walking cases, and during convalescence, men frequently spread the disease broadcast, so that all open cesspools and drains must be considered highly dangerous.

3. The drinking water is considered safe at this time, but it is not known how long that this will continue. It is therefore ordered that all

the drinking water be boiled either in camp boilers or by the Forbes-Waterhouse boiler. If the latter is used, it must be managed by a reliable, carefully instructed soldier.

4. The most extreme care must be taken to keep flies from the food, particularly after it is cooked. These insects may come from considerable distances, and as there are numerous unsanitary open cesspools in the vicinity outside the camp, they must be looked upon as highly dangerous. Food receptacles, kitchens, and, if practicable, dining tents must be carefully screened.

5. All foods purchased in the vicinity and not supplied by the Commissary Department must, as far as practicable, be carefully investigated as to their source, particular attention being paid to milk, which frequently carries typhoid in hot weather. Fruits and

The Camp of the United States Regulars at the Exposition—a fine Example of Sanitary Supervision

Copyright, 1907, by International Photograph Corporation

The Jamestown Exposition at its Best—the Promenade before the State Buildings

vegetables, eaten raw, should first be carefully washed and with extra care, preferably in water which has been boiled.

8. To guard against ptomaine poisoning which is apt to occur in camp conditions in hot weather, it is directed that no lunches or other meat mixtures be made except immediately before use. Any cooked meats kept over from meal to meal must be kept in small quantities in ice. Extra care must be taken to detect the least tainting of meats, and even suspicious foods must be discarded. Stale fruits are particularly harmful. Milk should never be accepted if delivered warm.

This writer visited Pine Beach a few days ago and saw things that frightened him. In a sandy field dotted with scrubby undergrowth truckmen were dumping great loads of kitchen garbage, meat and vegetable cans, stable refuse, and other decomposing stuffs. Swarms of flies were fattening on the masses and flying about. Less than one hundred yards away—within easy distance of typhoid infection by flies—were three hotels calculated to accommodate two hundred persons. In the midst of the danger heaps, sitting on old soap-boxes and sheltered from the cold breeze by empty hushbands, were a shabby young negro and an Indian aged black man. They were crouching over a tiny fire of chips and bangles, warming their hands.

"What are you doing here, Uncle?" I asked.

"Des makin' a fish, sah," the aged one replied, touching his cap.

"What's the fish for?"

"Lard, I don't, sah," said the old man. "Dey tol' me tuh keep a fish in de hyeh to de garbage, as I'm heepin' it—da's all."

Of course some of the garbage was being burned. It was with great relief that the writer visited the crematory of the Twenty-third Infantry, United States Army, less than half a mile away. There, in a circular brick-walled pit the garbage from the company kitchens was being burned. Two alert negroes were keeping the fire alive. "Twenty-five bar's o' stuff we burned since eight o'clock dis mawnin'," said one of them, "an' it's only levsers erlock now."

In the heart of the sudden town of Pine Beach the visitor found a sanitary officer of the United States army inspecting a camp of the bundled, dirty tents in which fifty or sixty gypsies were living. All sorts of filth were scattered about the sandy soil, and in the midst of the camp a negro was driving a well-flare hygienic outlook.

"I'll report it again," said the officer, severely. "I hope it will do some good."

A middle-aged woman with chalky cheeks and thin, gray lips approached the inspector.

"Doctor," she pleaded, her teeth chattering as she spoke; "doctor, won't you come in and see my husband. He has malaria."

"You're having a malarial chill yourself right now," the doctor answered.

"Oh, I know," the woman answered, "but my husband isn't able to get out of bed."

The doctor and the visitor went in together. The husband's bedroom was next to the kitchen of one of the hotels built to accommodate visitors to the Exposition. He was proprietor of the restaurant part of the hotel. Under the kitchen and the man's bedroom was an open cesspool, which extended within fifteen feet of a new and shallow well, from which presently water would be drawn for drinking and cooking. The husband was shivering, pale, gray-lipped, racked with pain—a typical case of malaria. The doctor did what was possible for him, and later urged the proprietor of the inn to make other arrangements for

water and sewerage. In another building a quarter of a mile away the inspector and the visitor found an open cesspool under a fruit shop and within twenty feet of a well. Near by a mass was squalling, driving nails in a plank.

"Cesspool?" he mumbled through a mouthful of nails. "Certainly. Right here, behind me. Now, it don't do no harm."

By way of commentary on this, a swarm of gorse-carrying flies was buzzing between the cesspool and the fruit shop.

It is a great pleasure to be able to report that the town of Pine Beach is now being overhauled by competent sanitary officers. The early neglect came from the fact that this compact fifth city, containing not only the buildings already described, but also half a dozen large hotels calculated to shelter thousands of exhibition visitors, suddenly sprang into existence in the truck-farming lands of Norfolk County. The Board of Supervisors of the county, accustomed to big municipal problems, calmly slept over their duty in spite of the protest of Major Woodruff and Captain James, the military sanitary officers. The conditions seemed at one time to threaten the entire enterprise with disastrous epidemics of malaria or typhoid fever or both. But the writer had been investigating the lack of drainage and the consequent supply of infected water for only two days when the Norfolk County Board of Supervisors, spurred to a realization of their duty by the governors of the Jamestown Exposition, appointed a most energetic and competent man to clean up the town. There is no doubt that from this time on the town of Pine Beach will be as healthy as the Exposition itself.

A few of the Buildings which are likely to be permanently maintained

THE FATHER OF THE GAME

By L. J. DE BEKKER

THE House of Chadwick has had two titled members in recent years—Sir Edwin, famous in his day as a sanitary engineer, who lived to be ninety-three and received a K. C. B. from Queen Victoria in recognition of his services; and Henry, his younger brother, known wherever baseball is played as The Father of the Game, who reckons his age at eighty-three. To be eighty-three is something, but Father Chadwick doesn't look it. Like Peter Pan, he won't grow up, and, despite his years, his attitude toward the things he loves has all the buoyancy of youth. To see him at his best in point of youthfulness, you must see him at the ball park, where he is sure to be conspicuous by reason of his commanding figure and long gray beard, and because of the attention he receives from the players and officials. There his enthusiasm is contagious. He still is, as he has been for twenty-six years, editor of the official *Baseball Guide*, and is, besides, the recognized American authority on cricket.

"When I was a schoolboy in Brooklyn in 1837," says The Father of the Game, "the only prominent field sports in vogue were horse-racing and the old English game of cricket; the latter a game which had been played in New York city since the middle of the previous century—its being, in fact, a record that a cricket match was played on a field near what is now Fulton Market as early as 1751. Running races were the feature at the old Union Race course near Jamaica, and trotting matches at the Coneyville course.

"Though a form of baseball was played by the old Olympic Town-ball Club as early as 1831, the first regular baseball club was not organized until 1843, and that was the Knickerbocker Club, which still clung to a form of town-ball. Our national game, as it is now played, dates its existence no farther back than 1857, the year of the organization of the first National Association of Baseball Players. I may add that, up to the decade of the sixties, baseball was played entirely by amateurs, all professionalism in the game being barred by the old National Association rules. In 1868 the first professional baseball team was organized in Cincinnati, and a team of regular salaried players took the field, the club in question being known as the Red Stockings.

"In 1871 I was instrumental in dividing the baseball fraternity into two classes, amateur and professional, by assisting in the organization of the first National Association of Professional Ball Players, which, in 1875, gave way to the present National League.

"You ask my opinion as to why it is that our national game, in its professional department, has been, and still is, disgraced by a degree of 'mobocracy' foreign to the character of the game itself, and mostly to the measures of the clubs in the loss of patronage of the grand stands which it leads to, besides being a heavy handicap to the efforts made to sustain the high reputation of the existing system of 'organized' professional baseball, by

the rulers of the 'National' and 'American' baseball leagues, and by those of the majority government of the 'National Association of Professional Baseball Leagues'.

"In the early history of professional baseball, especially during the decade of the seventies, when that curse of all field sports, pool gambling, nearly gave a death-blow to the whole professional business of the game, I had to battle with the evil in question, until I drove every 'crook' of the period out of the professional fraternity, and then it was that the baseball business began to earn the splendid reputation it now possesses of being the most honestly conducted sport or game there is in vogue, in which professional exemplars take part. But of late years an abuse has been allowed to grow up in the professional baseball ranks second in its evil effect to the evil of downright 'crookedness'; and that is the 'kicking' evil, viz., the disciplining of the decisions of the umpires in the game.

"During the past decade this demoralizing evil grew to such extremes, owing to the laxity in discipline on the part of club team managers and the aid and countenance given the managers and their players by the majority of the magnates of the professional leagues and clubs, that it led to the inauguration of a condition of things in the ranks which disgusted the best class of patrons of the professional business at large. Then it was that the President of the young American League, Mr. Ban Johnson, entered upon a crusade against the 'kicking' evil and its sequence of rosy blackguardism in the ranks; and his good example woke up the other league magnates to a realizing sense of the very costly nature of the abuse on loss of public patronage; and since then the black-guard 'kickers' of the decade of the sixties, have been driven from the ranks of organized baseball, and the abuse reduced to a comparatively small minority of ugly and hot-tempered players, who have yet to learn the folly of the habit, in the loss of cool judgment the 'kicking' habit invariably involves.

"I notice that despite the efforts of Messrs. Pulliam of the National League, and of Mr. Johnson of the American, the 'kicking' especially in the poorly managed teams of the two leagues, is still indulged in, owing to the fact that the gentlemen in question do not make the punishment of the crime."

"Has baseball reached the final degree in its evolution?"

"By no means. The fault has always been in cricket, that too much importance was given the batting. The fault in baseball today is the prominence given to pitching and fielding. Properly to round out the game, equal stress must be laid on batting, so as to give it equal importance,—to equalize the forces of attack and defense."

"You've something new for the ball players and the 'fans' to think about and talk about, or even to write about.

THE FEAST OF TIGERS

By R. HOLT LOMAX

BOWMAN LIVINGSTON had been back from India only a week, yet the fellows at the Columbian Club, among whom he used to loiter in an atmosphere of high regard, were already commencing to look uneasy when he began—no; not began; resumed his interminable stories about tiger-hunting.

It is not given to every man who carries big guns to India to bring down three fine tigers, and everybody felt that Livingston should be allowed a little pardonable exaggeration; but it is worrisome to have to follow through dinner after dinner an enthusiastic long tale about *howdahs* and *shikaris* and *dek bungalows* and all the Hindustanee rest of it. So it was with gratitude that we all welcomed the interruption of Lieutenant de la Roche when he told a tale that dropped poor Livingston's tiger reminiscences forever. Our buoyant friend was laying down the law that the tiger takes to man-eating only when he is too aged and decrepit to hunt wild animals. De la Roche, a dry, brown little fellow late of the French army in Tonquin, begged his pardon most elaborately, and said:

"I know you will believe that I am not animated by a spirit of captious contradiction when I tell you of my experience to the contrary. The incident was so awful that I am reluctant to speak of it. I assure you that every time I hear or read the word tiger the air about me seems to vibrate with the shrieks that I shall never forget.

"I was leading a surveying expedition last year over the Fou Cha Hong Mountains, on the way into China, when we suddenly found ourselves assailed by a horde of tigers. Nothing I had ever heard prepared us for such a siege as this. In the daytime we could see the huge, silent, black-and-yellow beads sinking through the bush not far from our column. They never came near enough to attack us in force, but they trotted and walked watchfully along a course parallel with ours, and seemed to be always waiting for a chance to pounce upon any straggler. You may believe that we advanced with absolutely unbroken unity.

"I had always believed that the tiger is a solitary creature, that

hunts alone, or, at most, in pairs. But here they were actually stalking us in numbers—we often saw as many as seven or eight at one time. Although they only menaced us at long range in the day, the tigers were very dangerous at close range after night-fall. Under the advice of our *fei pan*, or head man, I made the camp very compact, and always ended the day's march at least one hour before the brief twilight. Then we built a ring of camp-fires around our stopping-place to keep the tigers away. You Americans have heard of the awful temperature in the Philippines. Believe me, it is still hotter and more exist in Tonquin. Add to that the warmth from the campfires, and you shall derive from the sum total some idea of the awful heat we had to undergo every night. The air was stifling. We slept very little, and then only fitfully.

"One night, as we were dozing inside our ring of fire in the Wang Hon Forest, we were aroused by the cries of human beings in awful distress. My friends, I have heard at the opera and in the theatre sounds which represented the cries of many souls in agony, but never have I listened to such shrieks as those. The number of voices seemed to be myriad. There could be no doubt of the dire extremity of the people. In a moment every one in our camp was wide awake. I called the *tai pan*.

"Get the boys ready," I ordered him. "We must save those people."

"My lord," he replied, "it is madness. Do not lead us outside of the ring of fires. If we go we shall die. The tigers will devour us. They are at work now. It is the cries of their victims that we hear. We can do no good, and if we go we die."

"Gradually the cries diminished in volume, died into silence. I felt rather than heard the rustle of every leaf in the forest. Sleep was impossible for any of us. We tossed on our cots, oppressed by the stifling heat of our protective fires, and frightened by the screams that still rang in our ears.

"It was safe to venture out at daylight; so, with my *ash* altern, the *tai pan*, and a dozen *wo fox*, I proceeded in the

(Continued on page 811.)

A NEW ALL-STEEL HIGHWAY FROM NEW ENGLAND TO FLORIDA

How the new Bridge over Hell Gate will Look when Completed

WITH the completion of plans for the new East River bridge of the New York Connecting Railroad, a momentous step is taken in the railroad development of the Atlantic States. This bridge, which will form part of a steel viaduct more than three miles long, will connect the New York, New Haven, and Hartford Railroad system in the Bronx with the Long Island and Pennsylvania systems. With a sweeping curve the viaduct will pass over Hell Gate, Wards Island, Little Hell Gate, Randall's Island, and Bronx Kills, making possible a through all-rail route between New England and the South and West. Through trains from Boston may then run to New York, Philadelphia, Baltimore, and Washington, Palm Beach, New Orleans, Chicago, St. Louis, or any other Southern or Western city without leaving the rails. Heretofore cars for such through trains have been ferried around New York from the Bronx to Jersey City.

The plans for the bridge over the waters of Hell Gate show a steel arch span of 1000 feet between abutments. These abutments are monumental stone towers, dividing the arch-bridge proper from the steel viaducts that approach it. Granite at the base, moulded concrete above, the towers will rise to a height of 200 feet, and will contain rooms needed for railroad operation. The tracks themselves will be 140 feet above the water, passing through the steel arches that rise 130 feet higher. Some of the steel members will be nine feet in diameter and weigh 100 tons each.

This will be the longest and heaviest steel bridge in the world. Eighty thousand tons of steel will be used in its construction. It will carry four railroad tracks, embedded in stone ballast so as to render the structure noiseless.

The carrying capacity of the bridge will be twenty times greater than that of the Brooklyn Bridge, or equal to four lines of the heaviest freight locomotives. About three years will be necessary for its completion.

Of the four tracks which it will carry, two will be for passenger and two for freight. The passenger tracks, by way of a cut-off in Queens County, will connect with the tunnels of the Pennsylvania Railroad and its central station at Thirty-third Street and Seventh Avenue, Manhattan, and with the Long Island Railroad and its seashore resorts and city stations; and all of these lines will connect with the New York, New Haven, and Hartford, and other New England lines. The freight tracks will run across Queens, and, with the Long Island Railroad, will form a big loop around Brooklyn. Through freight from New England to the South and West will be carried over this route and across New York Bay from Bay Ridge to Greenville, New Jersey. Thus there will be two distinct routes for the two classes of traffic, and neither will interfere with the other. Besides planning a bridge of ample strength, the constructors have endeavored to make it architecturally impressive.

Another View of the new Bridge which will make it possible to run through Trains from Boston to Palm Beach without leaving the Rails. At present Cars for such through Trains must be Ferried around New York from the Bronx to Jersey City

THE NEW DIPLOMACY

By JOHN KENDRICK BANGS

The Gilbert and Sullivan opera, "The Mikado," has been suppressed in England for fear of offending Japan.—Cable Despatch

Naw let us call off "Hamlet" and lest we disturb the chains
Of honor and affection that have bound us to the Danes,
Suspend the sale in bakershops of the dainty Charlotte-Russe,
Lest with our friends the Russians we shall violate the truce.

Na longer will Bologna, and on Roqufort look abance
Lest we be charged with showing teeth unto our friends of France.
Forbid our little boys and girls to dance that funny spiel
Of walking Spanish lest we grieve our allies of Castile.

Give up the droll Dutch dinstet that Fields and Weber speak.
Tis possible that Kaiser Bill would not enjoy the joke.
Suppress Bret Harte's immortal lines about the Heavhen Chink—
We can't afford, these times, to place fair Peking on the blink.

Stop slugging "Trenton"; let old "Rigoleto" fill—
They're mighty, mighty sensitive out there in Sunny It.
Let no one beat a Turkish rug, or shake it with a jerk:
Just sponge and dust it gently lest you pain the festive Turk.

No jokes about the German's crimes should be allowed to go—
It will not do to pain or grieve the friendly Ekkinu.
Stop minstrel shows, 'twere better so; a much more peaceful plan
To do no thing that can offend the dusky Congoon.

Then we shall have an amity benignant and world-wide.
Friends will be found increasingly on every single side.
What quarrelling is needful for a really happy life.
Keep for your neighbors, children, and the mother of your wife.

Y UNDERWOOD & UNDERWOOD

THE EDALJI CASE AND BRITISH JUSTICE

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

London, May 25, 1907.

IT is fortunate that British justice rarely errs. For when it does, it is through that stupidity against which the gods fight in vain. The notorious Beck case of two or three years ago was the result of nothing deliberate or premeditated, of no persecution or perjury, of no pedantic insistence upon legal technicalities, of no cooked-up evidence, of nothing, in short, that in any way resembled the Dreyfus affair with which it was historically compared. It was the result simply of stupidity, the stupidity of officials who, having got an idea into their heads, not only could not get it out again, but were inevitably driven to do all they could to justify it. The Edalji case has perhaps a somewhat more sinister look, and I do not think it uncharitable to describe it as something more than an instance of a paralytic and of lacrimable stupidity. That is, of course, on the assumption which very few Englishmen do not share, that a mistake has in fact been committed. We shall know before long what the commission which was appointed to review the whole case thinks on that point. It is already very reported that the findings of the commission are in Edalji's favor, and that he is to be granted a free pardon. But as none of the sittings of the commission have been in public, and as there is little sense in pardoning a man for a crime of which he was inferentially innocent, I think the report may be discounted as guesswork and nothing more.

George Edalji

THE CENTRAL FIGURE IN THE CASE

The facts of the case are exceedingly involved, but with the help of the admirably statement, which Sir Arthur Conan Doyle, in his best Sherlock Holmes vein, put forth a few months ago on Edalji's behalf, I shall hope to be able to reduce them to some sort of order.

The story begins as far back as 1874, when the Reverend S. Edalji, a Church of England clergyman of Purser origin, was married to a Miss Stenham. Such marriages are of course rare, but race-prejudice is curiously quiescent in Englishmen and Englishwomen—so long as they stay in England—and the union between an English girl and a colored clergyman seems to have been regarded as something unusual, indeed, but not worth resenting. An uncle of the bride held the gift of the living of Great Wyrley in Staffordshire, a half-ruined, half-agricultural parish. The Reverend S. Edalji was presented to it a few years after his marriage. He has now been the vicar for thirty-one years, conducting himself in his somewhat difficult position with great dignity and discretion, but he was naturally, to some extent, a marked man. His son, George, the central figure of the present case, was born in 1876. When he was twelve years old, that is, in 1888, a number of threatening anonymous letters were received at the vicarage. They were traced to a servant-girl in the house, who was accused among other things of writing up ribald sentences about her employers on outhouses and buildings. She was bound over to keep the peace, and for a while the letters ceased. In 1892 they began again, and this time they were sent not merely to the vicarage, but to other people in the neighborhood. They lasted for three years. Some of them were published by Mr. Edalji in the Staffordshire papers in the hope that their author might be discovered. They all proceeded from a single source, and they were all tainted with the incident of the servant-girl in 1893. They were accompanied by a long series of ingenious and elaborate hoaxes, such as the continual laying

of objects on the vicarage window-sills or under the doors. These letters had four signal characteristics. They showed, first, an almost diabolical hatred of the whole Edalji family, a hatred that seemed particularly directed against George. Secondly, they displayed an equally frantic admiration for the local police. Thirdly, they were marked with a real or simulated religious mania. Fourthly, they betrayed an extremely intimate knowledge of the names and affairs of the people in the district.

I have said that various hoaxes were played at the time on the Edalji family. Advertisements were inserted in their name in the local papers; trashy people delivered espousals of unordained goods; and so on. Finally a forged apocryphal, signed with George Edalji's name, and instantly disowned by him, appeared in the public press. In it he was made to confess himself the writer and author of the anonymous letters "received by various persons during the last twelve months." Among the hoaxes was the placing of a large key on the vicarage doorstep on December 12, 1892. This key was quickly found to have been taken from Walsall Grammar School, Walsall being a town some six miles away. This incident was brought to the notice of the chief constable of the county, Captain the Honorable G. A. Anson, and he was at the same time furnished with information connected with it partly by the local police and partly from a source which he has never disclosed. This information led him to write to Mr. Edalji accusing his son, George, of having stolen the key from the Walsall Grammar School, and laid it on the vicarage doorstep. (George, I may add, was not educated at Walsall Grammar School.) The letter ended, with this menacing sentence: "I may say at once that I shall not pretend to believe any protestations of ignorance which your son may make about this key." More than two years later, when Mr. Edalji wrote to the chief constable complaining of the anonymous letters and the repeated hoaxes, he received in reply a letter in which the chief constable certainly seemed to hint, but did not openly state, that George was the culprit. The point to note is that the Staffordshire police had from the beginning their suspicions of young Edalji.

At the end of 1893 both the letters and the hoaxes suddenly ceased. From that day till 1903 peace reigned in Great Wyrley, though George Edalji was a resident in the vicarage all the time. Then began the series of outrages that sent the neighborhood into a panic. On February 2, 1903, a valuable horse was found to have been cut open during the night. Two months later a cock, three months later a cow, then another horse, then a sheep, then two cows. Then two horses were put to death in the same way. On August 17 a pony at Great Wyrley Colliery was similarly destroyed. It was for this crime that George Edalji was arrested and convicted. But his imprisonment raised no cessation of the outrages. On September 21 another horse was despoiled. In November a horse and mare were found mutilated in the same field. In February, 1904—Edalji all this time being in prison—another horse was ripped open, and finally, in March, two sheep and a lamb were similarly killed. For this last crime a milner named Farrington was convicted on circumstantial evidence and sentenced to three years' imprisonment.

Why was George Edalji arrested for the crime of August 17? Chiefly because the epidemic of anonymous letters had burst out again, and his name was mentioned in several of them. Whether the 1903 letters were by the same hand as those of 1892 and 1893

The Scene of the Outrage at Wyrley, England, for which Edalji was Convicted and Imprisoned

there is no absolute proof to show, but all the probabilities of the case point that way. The 1905 batch were signed in various names, but the most important of them purported to come from a young schoolboy, named Treator, who not only denied all knowledge of them, but was away in the Isle of Man when some of them, bearing a Staffordshire postmark, were written. Treators travelled to school with some companions every day by train, and Edalji, who went to business by the same train, had more than once happened to get into the same compartment with him. As some of the other boys were referred to by name in the anonymous letters, it was considered that the police scored a point by being able to prove that Edalji was or might have been acquainted with them. For the theory of the police was that Edalji and the author of the anonymous letters were one and the same. This is a somewhat remarkable theory, because several of the letters openly accused Edalji of being the perpetrator of the outrages, and others charged him with various acts of immorality. Some of the letters were sent to Edalji, others to his father, and others—among them one threatening to shoot a police sergeant—in the police. Their general purport was that a little sustaining gang, of which Edalji was the chief, had been organized and was preying upon the district.

Edalji's actions at the time of these outrages were scarcely those of a guilty man. Such anonymous letters as he received himself he at once communicated to the police. He offered a reward of £25 to the public press for the apprehension of the criminal—for his own apprehension, according to the theory of the police. He suggested to them that bloodhounds should be employed in running down the criminal. This is hardly the way in which a guilty man, anxious to avoid detection, would behave. Moreover, his whole mode of life and character were at variance with the suspicions of the police. In 1903 he was a twenty-seven years old and a practising lawyer. He was extremely shy and nervous, a total abstemious, a non-smoker, absorbed in his profession, in which as a student he had greatly distinguished himself, and so afflicted with astigmatic myopia that Sir Conan Doyle, who has himself practised as an oculist, declared that "the idea of such a man securing fields at night and avoiding cattle while avoiding the watching police was indubious to any one who can imagine what the world looks like to eyes with myopia of eight dioptries."

It was, as I have said, for the crime of August 17, 1903, that Edalji was arrested and convicted. On that day Edalji reached home at 6.30, walked down to the host-makers in the village and returned to the vicarage for supper at 8.25. After supper he retired to bed in the same room as his father. The bedroom door was locked in accordance with Mr. Edalji's usual custom, and the

outside of the house was watched by constables and detectives whose suspicions had been directed towards the young lawyer. No one was seen to leave it. At eleven o'clock the pony, which was discovered mutilated at 6.30 next morning, was seen apparently unharmed. Between those hours, therefore, the crime was committed. The Rev. M. Edalji testified, and there was nothing to shake his evidence in the slightest, that his son spent those hours in bed in the same room with him. On the morning following the outrage the police went to the vicarage. The son had already gone off to business. The police entered his parents' room to remove all the young man's clothing. One coat was said to be damp—the night had been excessively rainy—and to have stains on it. Some of the stains on analysis proved to be starchy stains, probably from fish sauce or bread and milk; and two others on the right cuff, of the size of a dime, were declared to be mammalian blood. A set of razors belonging to the vicar was also seized; some of them were found to be wet and a rust stain was discovered on another. The police theory was that Edalji had ripped up the pony with a razor, and had done it with such inimitable exactness that only two dubious drops of blood, each the size of a dime, had fallen on his cuff.

But besides the stains, the coat was also alleged to have a brown hair on it. Mr. and Mrs. and Miss Edalji and the police inspector examined it at the vicarage. The inspector thought he saw some horsehairs, but some of the family was able to detect them. The inspector took the coat away with him. Twelve hours later it was examined by the police surgeon, who picked from its surface twenty-nine undoubted horsehairs. It will not say that the police put them there, but it is questionable that after the coat was taken to the police station, and before it was examined by the surgeon, a portion of the hide of the mutilated pony was also in the possession of the police. Some damp trousers and a pair of very wet boots were also discovered at the vicarage.

Edalji denied wearing either the coat or the trousers on the night of the outrage, but admitted that he had worn the boots. It had been raining most of the day and he had got them wet. But no blood was found on either the trousers or the boots, and the mud on them was road mud, not the yellowish mixture of clay and mud that lay round the scene of the crime. There is no need to go into the rest of the evidence that was produced against the prisoner. It was of the same spurious character throughout. But there are one or two points to be noted in connection with the outrages that were committed while Edalji was in prison. One of these ended in the death of a horse belonging

(Continued on page 852.)

DEMONSTRATING A POINT IN THE SINGULAR EDALJI CASE

In his defence George Edalji, Sir Conan Doyle made a vital point of the accused man's catenae short-sightedness. In order to make clear the importance of this point, the two illustrations on this page were prepared by the "London Sphere." The upper photograph shows an interior as a man with normal sight would see it. The other photograph shows the same interior as a man with Edalji's vision would see it, taken by a specially adapted lens. Edalji's father has testified that his son did not see ghazis prior to his arrest. It is plain that if all that Edalji could see of a shop in daylight is what is shown in the lower illustration, he would see practically nothing at night; and, as Sir Conan Doyle has pointed out, "to find a pony in a dark field, or, indeed, to find the field itself . . . would be a hard task, while to avoid a lurking catenae would be absolutely impossible."

Edalji denied wearing either the coat or the trousers on the night of the outrage, but admitted that he had worn the boots. It had been raining most of the day and he had got them wet. But no blood was found on either the trousers or the boots, and the mud on them was road mud, not the yellowish mixture of clay and mud that lay round the scene of the crime.

There is no need to go into the rest of the evidence that was produced against the prisoner. It was of the same spurious character throughout. But there are one or two points to be noted in connection with the outrages that were committed while Edalji was in prison. One of these ended in the death of a horse belonging

MAM' LINDA*

A Novel

BY WILL N. HARBEN

ILLUSTRATED BY F. B. MASTERS

CHAPTER XII

A QUER, secret meeting of negroes was going on in Darby. Stealthily they left their cabins and ramshackle homes, and one by one, through the darkest streets and alleys, they made their way to the house of Neb Wynn, a man who had acquired his physical being from the confluence of three distinct streams of blood—the white, the Cherokee Indian, and the negro. He owned and drove a dray on the streets of the town and, being economical, he had accumulated enough money to build the two-story frame (not yet painted) home in which he lived. The lower floor was used for a negro restaurant, which Neb's wife managed; the upper was devoted to the family bedroom, a guest-chamber for any one who wished to spend the night, and a fair-sized "hall" with windows on the street, which was rented to colored people for any purpose, such as dances, lodge meetings, or church assemblies.

It was in this room where on a light burned that the negroes met. Indeed, no light was below, and when a negro who had been secretly summoned reached the spot, he assured himself that no one was in sight and then approached the restaurant door on tiptoe, rapped twice with his knuckles, paused a moment, and then rapped three times. Thereupon Neb, with his ear to the keyhole on the inside, cautiously opened the door and drew the applicant within, and rising the shutter softly, asked, "What is the password?"

"Nevy," was the whispered reply.

"What's the counter sign?"

"Peace an' good will to all men. Thy will be done."

"All right, I know you," Neb would say. "Sit down up dar; but, mind you, don't speak one word."

And thus they passed—the men who were considered the most substantial colored citizens of the town. About ten o'clock Neb came cautiously up the narrow stairs, entered the room, and sat down.

"We are all here," he announced. "Brother Hardestadt, I've done my part. I ain't no public speaker; I'll leave de rest ter you."

A figure in one of the corners rose. He was the leading minister of the place; he cleared his throat and then said: "I would open with prayer, but in pray we ought to stand or kneel, and either thing would make too much disturbance. We can only ask God in our hearts, brothers, in be with us here in the darkness and help lead us out of our trouble; help us to decide, if we can, singly or in a body, what course to pursue in the grave matter that confronts our race. We are being sorely tried, tried almost past endurance; but the God of the white man is the God of the black. I have been talking to Brother Black to-day, and I feel—"

He broke off, interrupted by a sharp rapping on the stair below. "Huck!" Neb Wynn cried out in a warning whisper. He crept on tiptoe across the carpetless room, out into the hallway, and leaned downward.

"Who dat?" he asked, in a calm, raised voice.

"It's me, Neb. I want ter see you. Hurry up."

"It's my wife," Neb informed the breathless room. "Sounds lak she's scared. Don't say no word till I get back. Mind, you folks got ter be careful ter-night."

He descended the creaking stairs to the landing below. They caught the low mumbling of his voice intermingled with that of his wife, and then he crept back to them—strangely silent, they thought, for after he had resumed his seat against the wall in the dark human line they heard only his heavy breathing.

Brother Black rose and leaned anxiously on the back of his chair. "I'm gosh' to tell you, faithful friends, a secret," he said; "a secret which if it was not dat, we knowed it might hang us all. So far it isn't with me an' a black 'emur dat kin be trusted—my wife. Gen'men, I know what Pete Warren is. I kin lay my hands on 'im any time. He's right here in dis town ter-night."

A sudden burst of surprise rose from the dark room, then all was still; so still that the speaker's grasp of his chair gave forth a harsh, rasping sound.

"Yes, my wife need 'im in de ol' lumberyard back o' our house, as he was with er right ter look at dat she mighty nigh went out in 'er senses. He was all cut in de face, an' his clothes an' shoes was des hangin' in 'is ar'fices, an' his eyes was most poppin' out'n his head. He was starvin' ter death—hadn't had a bite o' eat since he ran off. When she seed 'im it was about a hour by

* Began in HARBEN'S WEEKLY, Vol. LI, No. 3038.

me, an he begged 'er to fetch 'im some'n' t' eat. Gen'men, he was so hungry dat she say he liked her haw's lak er dog when he was lakke' to er. She come home an told me on as was what ter do. Gen'men, 'er God on high I want ter do my duty ter my race an also to de white, but I couldn't see my way ter meddle. De white folks—some of 'em, anyway—say dat we aid an' encourage crimes 'mongst our people, an while my heart was bleedin' fer dat boy I couldn't, underhand, he's 'im widout goin' ter de men in power accordin' ter law."

"And you did right," spoke up the minister. "As much as I pity the boy, I would have acted as you have done. He is accused of murder and is an escaped prisoner. To decide that he was innocent and help him escape is exactly what we are blaming his parents for doing—taking the law into hands not sanctioned by authority. There is only one thing that can decide the matter, and that is the law of the land we live in."

"Dat's exactly de way I looked at it," said Black. "an as I tof my wife not ter go nigh 'im ergin. I knowed dis meetin' was up fer to-night, an I des thought I'd fetch it here on lay it 'o' you all on take er vote on it."

A good idea," said the minister from his chair. "And, brethren, it seems to me, as a body of representative negroes of this town, have now a golden opportunity to prove our sincerity to the white race. As you say, Brother Black, we have been accused of remaining inactive when a criminal was being pursued for crimes against the white people. If we can agree on it to a man, and can turn in a prisoner now, how that will show the whites to apprehend him have failed, our act will be flashed all round the civilized world and give the lie to the charge in question. Do you think, Brother Black, that Pete Warren is still hiding near your house?"

"Yes, I do," answered the barber. "He would be afraid to leave dat place, an I reckon he's waitin' dar now fer my wife ter fetch 'im some'n' t' eat."

"Well, then, all we've got to do is to see if we can thoroughly agree on the plan proposed. I suppose one of the first things, if we do agree to turn him over to the law, is to consult with Mr. Carson Dwight and see if he can devise a way of acting with perfect safety to the prisoner and all concerned. If he can, our duty is clear."

"Yes, he's de man, God knows dat," Black said, enthusiastically. "He won't let us run no risk."

"Well, then," said the minister, who had the floor, "let us put it to a vote. Of course it must be unanimous. We can't act on a thing as perilous as this without a thorough agreement. Now, you had all heard the plan proposed. All in favor make it known by standing up as quietly as you possibly can, so that I may count you."

Very quietly, for so many things in concert, men on all sides stood up. The minister then began to grope round the room, fumbling with him hands the standing voters. "Who's this?" he suddenly exclaimed, when he reached Neb Wynn's chair and lowered his hands to the drayman's bowed shoulders.

"It's me," Neb answered. "Me, dat's who—me!"

CHAPTER XIII

"On!" There was an astonished pause.

"Yes, it's me. I ain't votin' dat way," Neb said. "You all kin act fer youself. I know what I'm alout."

"But what's the matter with you?" Brother Black demanded, sharply. "All dis time you been de most axious one ter do some'n', an now when we got er chance ter act wid judgment an caution all in a body an, as Brother Hardestadt says, ter de honor of our race, why, you—"

"Hold on, des keep yo' shiet on," said Neb, in a queer, tremulous voice. "Gen'men, I ain't placed des much de same as you all is. I don't want ter tek de whole responsibility on my shoulders."

"You are not taking it on your shoulders alone, brother," said the minister, calmly; "we are acting in a body."

"No, it's all on me," Neb said. "You said, Brother Black, dat Pete was in de lumberyard 'hind yo' house. He ain't. You might as 'er' ever 'stuck o' planks in every dry-kiln, but you wouldn't da 'im. He's a cousin of my wife's, an me 'a' dat boy was good, true friends, an as he come here des now when you heard my wife call me an 'I'd rood kised' on my swarey. He ain't out as my dadde now in de hay up in de loft, waitin' fer me to fetch 'im suppin' t' eat an soak as you all got off. My wife say he's de

most pitiful thing dat God ever made, en, gen'men, I'm sorry fer 'im. Law or no law, I'm sorry fer 'im. Put yo'selves in Pete's shoes an' you wouldn't be so easy ter vote yo'selves bebid de burn. Whin'd dey git in jury dat 'ad believe in his innocence when dey kin prove dat he threatened de dead man? Nowhar in dis State. No innocent niggers ever been hung, eh? No innocent nigger in de chaingang, eh? Huh! dey as thick as fleas."

When Neb had ceased speaking not a voice broke the stillness of the room for fully ten minutes; then the minister said, with a deep-drawn breath: "Well, there is really no harm in looking at all sides of de question. It seems to me that it would only be fair, since you say Pete Warren is near, fer him to be told of de situation and left to choose fer himself."

"I'm willin' ter do dat, God knows," said Neb; "an ef y' all say so, I'll fetch 'im here on you kin explain it ter 'im."

"I'm sure dat will be best," said Hardestade. "Hurry up. To save time, you might bring his food here—that is, if your wife has not taken it to him."

"No, she was aboard ter go out dar. I'll mek 'er fetch it up here while I go after him. It may tek time, fer he may be afraid to come in. But ef I tell 'im de grub's here I bound you he'll come."

They heard Neb's voice giving instructions to his wife, and then the outer door in the rear was opened and closed. Presently a step was heard on the stair and they held their breaths expectantly, but it was only Neb's wife with a plate of food. She placed it grudgingly on a little table which she dragged softly from a corner into the centre of the room, and without a word retired. A door below creaked on its hinges; steps resounded loudly from the floor below, and Neb's urgent, piteous voice rose to the inner ears of the listeners.

"Come on; don't be a baby, Pete," they heard Neb say. "Dey all yo' friends en want ter he'p you out'a yo' trouble ef dey kin."

"What dat meat? What it? Oh, God, what it?" It was the voice of the pursued boy, and it had a queer, uneasy sound that all but struck terror to the hearts of the listeners.

"She br' it up dar whar dey all is," Neb said; "come on!"

That seemed to settle the matter, for the clamorous steps increased and then Neb led Pete Warren into the room.

"Wait; let me git you er chair," Neb said.

"What it? Whar it? My God! whar dat meat?" Pete cried, in a harsh, rasping voice.

"Whar'd she put it?" Neb asked.

"Hanged ef I know."

"On de table," said Hardestade.

Neb reached out far the plate, and had as soon touched it than Pete sprang at him with the snarl of an angry dog. The plate fell with a crash to the floor and the food with it.

"There!" Neb exclaimed, "you did it."

Then the spectators witnessed a pitiful, even repulsive scene, for the boy was on the floor, a big bone of ham in his clutch. Nothing was heard except the snuffing, sniffling, crunching sound that issued from Pete's nose, mouth, and jaws.

"Sh!" Neb kneeled, warningly; but there was no cessation of the ravenous, noisy eating of the starving negro. "Sh!" It was Neb's warning, this again. All was silence in the room; even Pete paused to listen. It was the low drone of human voices, and many in number, immediately below. A light from a suddenly

exposed lantern flashed on the walls. Neb approached the window, but, afraid even cautiously to raise the mask, he stood breathless. Then through his closed lips came the words: "We are emight; gen'men, we in fer it certain en sho'. They done tracked us down."

There was a loud rapping on the door below, a stifled scream from Neb's wife at the foot of the stairs, and then a sharp, commanding voice sounded outside.

"Open up, Neb Wynn," it said. "We are on to your game. Some devilment is in de wind, and we are going to know what it is."

Neb suddenly and boldly threw up the sash and looked out. "All right, gen'men; don't hek' my saw lock. I'll be down dar in er minute." Then quickly turning to Pete, he bent and drew him up. "Mek er break fer dat winter grub dar, slide down de shed roof, en run fer yo' life, Run!"

There was a great clatter of chairs and feet in the group of men, a crashing of a thin window-sash in the rear, a heavy thumping sound on a roof outside, and a loud shout from lusty throats below:

"There he goes! Catch 'im! Head 'im off! Shoot 'im!"

Then darkness, chaos, and terror reigned.

CHAPTER XIV

WHILE these things were being enacted, Sanders, who had taken supper at Warren's, and Helen sat on the front veranda in the moonlight. Scarcely any other topic than Mam' Linda's trouble had been broached between them, though the ardent visitor had made many futile efforts to draw the girl's thoughts into more cheerful channels. It was shortly after ten o'clock and Sanders was about to take his leave, when old Uncle Lewis emerged from the shadows of the house and was going along the walk towards the gate leading into the Dutch grounds, when Helen called out to him.

"Where are you going, Uncle Lewis?" she asked him.

He doffed his old slouch-hat and stood bare and bald, his smooth pate gleaming in the moonlight. "I started over ter see Marse Carson, Missy," he said, in a low, husky voice. "I know good en well dat he can't do a thing, but Linda's been beggin' me ever since she seed him en Mr. Ginner drive up at de back gate. She thinks maybe dey Parat suppin' bout Pete. I know dey ain't, honey, 'n' dey 'ud 'a' been over 'o' dis. Dar he is on de verandah now.—Oh, Marse Carson! Kin I see you er minute?"

"Yes, I'll be right down, Lewis," Carson answered, leaning over the railing.

As he came out of the house and approached across the grass, Sanders and Helen went to meet him. He bowed to Helen and nodded coldly to Sanders, to whom he had barely been introduced, and then with a furrowed brow he stood and looked at the old man husbly made his wants known.

"I'm sorry to say I haven't heard a thing," Uncle Lewis, he said. "I'd have been over to see Linda if I had. So far as I can see, everything is just the same."

"Oh, young marse, I don't know what I'm agin' ter do. I don't see how Linda gins' ter pass thro' no other night. She'n luv'n' n't de stake,

Illustration by J. B. Martin

"My God, he's shot!" Garner called out

Marce Carson, but thou it all she blesses you for tryin' so hard."

Carson lowered his head. There was a look of profound and tortured sympathy in his strong face. Garner came out of the house, smoking a cigar, and strolled across the grass toward them.

Carson was white, and the arms Garner had taken were trembling. "I don't know, Garner—I can't stand anything like that," Dwight said. "It has made me actually sick. I—I—can't stand it. Good night, Garner; if you won't spend the night with me I'll turn in. I—I—"

"Hush! what's that?" Garner interrupted, his ear bent towards the centre of the town.

It was a loud and increasing outcry at Noh Wynn's house. Several reports of revolvers were heard, and screams and shouts:

"Head 'im off! Shoot 'im! There he goes!"

"Great God!" Garner cried, excitedly. "Do you suppose it is—?"

He did not flinch, for Carson had raised his hand to check him, and stood staring through the moonlight in the direction from which the sounds were coming. There were now audible the rapid and heavy footfalls of many runners. On they came, the sound increasing as they drew nearer. They were only a few blocks distant now. Carson cast a hurried glance towards the Warren house. There, leaning on the fence, supported by Helen and Lewis, stood Linda, silent, motionless. Sanders stood alone not far away. On came the rushing throng. They were turning the nearest corner. Somebody or something was in the lead. Was it a man, an animal, a mad dog, a—

On it came, forming the point of a human triangle. It was a man, but a man divided to the earth by fatigue and weakness, a man who ran as if on the point of sprawling at every desperate leap forward. His hard breathing came fell on Carson's ears.

"It's Pete!" he said, sharply.

Garner laid his firm hand on his friend's arm. "Now's the time for you to have common sense," he said. "Remember, you have lost all you care for by this thing—don't throw in your life. By God, you sha'n't! I'll—"

Dwight wrenched his arm from the clutch of Garner and dashed towards the gate and was out in the street just as the negro reached him, stretched out his hands, and fell sprawling at his feet. He remained there on his knees, his hands clutching the young man's legs, while the human wolf-pack passed round.

"He's the one!" a hoarse voice exclaimed. "Kill 'im. Turn him—the d—"

Standing pinioned to the ground, Carson raised his hands above his head. "Stop! Stop! Stop!" he kept crying, as the crowd swayed him back and forth in their effort to lay hold of the fugitive, who was slipping from him with the desperate clutch of a drowning man to his rescuer.

"Stop! Listen!" he kept shouting, till those nearest him became calmer, and forming a ring, pressed the outer ones back.

"Well, listen!" some of them cried. "But what he's got to say, it's Carson Dwight's. He's not taking any for his; he's a white man. He doesn't take up for black devils that—"

"I believe this boy is innocent," Carson's voice rang out, "and I plead with you as men and fellow citizens to give me a chance to prove it to your fullest satisfaction. I'll stake my life on it. Some of you know me; well believe me when I say I'll stake every cent I have, everything I hold dear on earth, if you will only give me the chance."

A cry of fierce opposition rose in the outskirts of the throng, and it passed from lip to lip till the storm was at his height again. Then Garner did what surprised Carson as much as anything he had ever seen from that man of mystery.

"Stop! Listen!" Garner thundered, in tones of such command that they seemed to sweep all other sounds out of the tumult.

"Let's hear what he's got to say. It can do no harm."

The trick worked. Not three men in the mad mob associated the voice or personality with the law partner of the man demanding their attention. The sound subsided; it fell away till the low, whispering groups of the frightened fugitive were heard. There was a gasp and a sidelong look on the edge of the sidewalk, and feeling it behind him, Carson stood upon it, his hands on the woolly pate of the negro. As he did so his swift glance took in many things about him. He saw Linda at the fence, her head bowed upon her arms as if to shut out from her sight the awful scene. Near her stood Lewis, Helen, and Sanders, their expectant gaze fixed upon him. At the window of his mother's room, he saw the invalid clearly outlined against the lamplight behind her. Never had Carson Dwight put so much of his young sympathetic soul into words. His eloquence streamed from him like a sudden torrent of words. On the still night air it rose clear, firm, confident. It was a call not to them to be merciful to the mother loved there like a thing out from time, for passion like theirs would have been increased by such advice, but it was a call to patriotism. He pleaded with them to let their temperate action that night say to all the world that the day of intolerant lawlessness in the fair Southland was at an end. Law and order were the South's only solution of the frightful problem laid like another burden on a suffering people.

"Good, good!" It was the adroit Garner under his broad-brimmed hat in the edge of the crowd. "Listen, neighbors, let him go on."

There was a faint suggestion of agreement in the stillness that followed Garner's words. But other difficulties were to arise. There was a cluster of galloping horses round the corner on the nearest side street, and three men, evidently mountaineers, rode manly up. They reined in their puffing, panting horses.

"What's the matter?" one of them asked, with an oath. "What are you waiting for? That's the d— black devil."

"They are waiting, like human beings, to give this man a chance to establish his innocence," Carson cried, firmly.

"They are, d— you, are they?" the same voice answered back. There was a pause; the horseman raised his arm; something gleamed in the moonlight, and there was a flash and a report. The crowd saw Carson Dwight suddenly lunge to one side and raise his hand to the side of his head.

"My God, he's shot!" Garner called out. "Who is that man?" For an instant silence reigned; Carson still stood pressing his hand to his temple.

No one spoke; the three motive horses were rearing and prancing about in excitement. Garner made his way through the crowd, flinching then right and left, till he stood near the block. A good white man had been shot," he cried out. "Shoot by a man on one of those horses. Be calm. This is a serious business."

But Carson, with his left hand pressed to his temple, now stood erect.

"Yes, some reward back there shot me, but I don't think I am seriously wounded. It may fire on me again, as a dirty coward will do on a defenseless man; but as I stand here daring him to try it again, I plead with you, my friends, to let me put this bug into jail. Many of you know me, and know I'll keep my word when I promise to move heaven and earth to give him a fair and just trial for the crime of which you accuse him."

"It's Carson Dwight. My God, he's got grit," a voice cried. "Let him have his way, boys. The sheriff is back there. Heigh, Jeff Bralder, come to the front!"

"Is the sheriff back there?" Carson asked, calmly. In the strange silence that had suddenly fallen, he asked no more.

"Yes, here I am," Bralder was moving towards him through the crowd. "I was trying to spot the man that fired that shot, but he's gone."

"You let he's gone?" cried one of the two remaining horsemen, and stepped in, and the other, he turned and they both galloped away. This seemed a signal to the crowd to acquiesce in the plan proposed, and they stood voiceless and still, their rage strangely spent, while Bralder took the limp and cowering prisoner by the arm and drew him down from the block. Pete, only half comprehending, was crying piteously and clinging to Dwight, as Carson said:

"It's all right, Pete; come on; we'll lock you up in the jail where you'll be safe."

Between Carson and the sheriff, followed by Garner, Pete was the centre of the jostling throng as they moved off towards the jail.

"What dey gwine ter do, honey?" old Linda asked, finding her voice for the first time as she looked towards her young mistress, "Put him in jail where he'll be safe," Helen said. "It's all over now, Maamsy."

"Thank God, thank God!" Linda cried, fervently. "I knowed Marce Carson wouldn't let 'em kill my boy—I knowed it—I knowed it!"

"He didn't nobody say Marce Carson was shot, honey?"

old Lewis asked. "Seem ter me like I done heard—"

Pale and motionless, Helen stood staring after the departing crowd. Carson Dwight's powerful words were still ringing in her ears. They seemed to have been her heart from her breast. He had said, "You like a good strong free man, pleading as she would have pleaded for that simple human life, and they had listened; they had been swept from their mad purpose by the sheer sincerity and conviction of his young soul. They had shot at him while he stood a target for their unbridled passion, and even then he had dared to taunt them with cowardice.

"Daughter, daughter!" her father on the upper floor of the veranda was calling down to her.

"What is it, father?" she asked.

"Do you know if Carson was hurt?" the Major asked, anxiously. "You know, he said he wasn't; but that would be like him even if he were wounded. It may be only the excitement that is keeping him up, and the poor boy may be seriously hurt."

"Oh, father, do you think—?" Helen's heart sank; a sensation like autumn came down her legs, and she almost fell; but Sanders, who was white like on his face, he caught hold of her arm and was supporting her to a seat on the veranda. She raised her eyes to Sanders's face as she sank into a chair. "Do you think—I'd he look like he was wounded?"

"He could not make out," Sanders answered, seriously; and yet his lip was drawn tight, and he stood quite erect. "I—I thought he was at first, but later when he continued to speak I fancied I was mistaken."

"He put his hands to his temple," Helen said, "and almost fell. I saw him steady himself, and then he seemed stammered for a moment."

Sanders made no reply. "I remember her aunt said," he mused, his brows drawn together, "that she once had a sweet-heart. Could this be the man?"

CHAPTER XV

Ten minutes later, while they still sat on the veranda waiting for Carson's return, they saw Dr. Stone, the Dwight's family physician, come from his high chair, the hitching post near the door.

"I wonder what that means?" the Major asked. "He must have been sent for on Carson's account and thinks he is at home. Call to him, Lewis."

Hearing his name, Dr. Stone approached, his medicine-case in hand.

"Were you looking for Carson?" Major Warren asked.

"Why, no," answered the doctor in surprise; "they said Mrs. Dwight was badly shocked. Was Carson really hurt?"

"We were trying to find out," said the Major. "He went on to the jail with the sheriff, determined to see the boy protected."

"There was a sound of an opening door and old Dwight came out to the fence, hatless, restless, and pale. 'Come right in, Doctor,' he said, grimly. 'There's no time in loss.'"

"Is it as bad as that?" Stone asked.

"She's dying. If I'm any judge," was the answer. "She was standing at the window and heard that pistol-shot, and now Carson was hit. She fell flat on the floor. We've done everything, but she's still unconscious."

The two men went hastily in to the room where Mrs. Dwight lay, and they were barely out of sight when Helen noticed some one rapidly approaching from the direction of the jail. It was Keith Gordon, and as he entered the gate he laid his hand on Linda's shoulder and said, cheerily, "Don't worry now; Pete is safe, and the mob is dispersing."

"But Carson," Major Warren asked, "was he hurt?"

"We don't know yet," Keith was now at Helen's side looking into her wide-open anxious eyes. "He wouldn't stop a second to be examined. He was afraid something might occur to alter the temper of the mob, and wasn't going to run any risks. The crowd was made up mostly of town men, but a man from the mountains, a blood-rerelative of the Johnsons, could have killed the Major again, and Carson knew it. He was more worried about his mother than anything else. She was at the window and he saw her fall; he urged me to hurry back to tell her he was safe. I'll go in."

But he was detained by the sound of voices down the street. It was a group of half a dozen men, and in their midst was Carson Dwight violently protesting against being supported. "I told you I'll all right!" Helen heard him saying. "I'm not a baby, Garner; let me alone."

"But you are bleeding like a stuck pig," Garner said. "Your handkerchief is soaked." Carson cried, "I was stunned for a moment when it hit me, that's all."

Helen, followed by her father and Sanders, went hurriedly to meet the approaching group. They gave way as she drew near and she and Dwight faced each other.

"The doctor is in the house, Carson," she said, tenderly; "go in and let him examine your wound."

"It's only a scratch, Helen. I give you my word," he laughed lightly. "I never saw such a squeamish set of men in my life. Even stolid old Bill Garner has had seven duck fits at the sight of my red handkerchief. But how's my mother?"

Helen's eyes fell. "Your father says he is afraid it is quite serious," she said. "The doctor is with her; she was unconscious."

They saw Carson wince; his face became suddenly rigid. He sighed. "It may not be so well, after all. Pete is safe for a while, but if she—if my mother were to— I want no further, simply staring blankly into Helen's face. Suddenly she put her hand up to his blood-stained temple and gently drew aside the matted hair. Their eyes met and clung together.

"You must let Dr. Stone dress this at once," she said—more

She stood looking at her image in the mirror

Illustration by J. B. A. A. A.

gently. Sanders thought, then he had ever heard a woman speak in all his life. The visitor turned aside; there was something in the contact of the two that at once maddened him and drew him down to despair. He had dared to hope that she would consent to become his wife, and yet the man to whom she was so gently ministering had once been her lover. Yes, that was the man. He was sure of it now.

Dwight's attitude, tone of voice, and glance were evidence enough. Besides, Sanders asked himself, where was the living man who could know Helen Warren and not be her slave forever afterwards? "Well, I'll go right in," Carson said, gloomily. He and Keith and Garner were passing through the gate when Linda called to him as he came hastily forward, but Keith and Garner were talking, and Carson did not hear the old woman's voice. Helen met her and paused. "Let him alone to-night, Mamma," she said, almost bitterly. It seemed to Sanders, who was seeing new sides of her character. "Your boy is safe, but he is wounded—wounded, I tell you, and his mother may be dying. Let him alone for to-night anyway."

"All right, honey," the old woman said, "but I'm going to stay here till the doctor comes out on an 'im how day be is. My heart is full for night, honey. Seven must like find done listen for my prayers."

Sanders lingered with the pale, deeply distressed young lady on the veranda till Keith came out of the house and strode towards them across the dooryard.

"They are both all right, thank God!" he said. "The doctor says Mrs. Dwight has had a frightful shock, but will pull through. Carson was right, his wound was only a scratch caused by the grazing bullet. But God knows it was a close call, and there is but one man in the State now enough to have fired the shot."

When Keith and Sanders had left her, Helen went with dragging, listless feet up the stairs to her room. Lighting her lamp, she stood looking at her image in the mirror on her bureau. Her strangely drawn and grave her features appeared. It seemed to her that she looked older and more serious than she had ever looked in her life.

Dropping her glance to her hands, she noted something that sent a thrill through her from head to foot. It was a purple swathe left on her fingers by their gentle contact with Carson Dwight's wound. Stepping across to her wash-stand, she poured some water into the basin, and was on the point of removing the stain, but she paused and impulsively raised it towards her lips. She stopped again, and stood still, erect, and unaltered. Then a thought flashed into her brain. She was recalling the contents of that letter of Carson's to her poor brother; the hot blood surged over her and she dipped her hands and began to lave them in the cooling water. He was noble, he was brave, he had a great and beautiful soul, and yet he had written that letter to her dead brother. Yes, she had openly encouraged Sanders, and she must be honorable. At any rate, he was a good, clean man, and his happiness was at stake. Yes, she supposed she would finally marry him. She would marry him.

The Feast of Tigers

(Continued from page 236.)

direction from which the sounds had come. He broke suddenly into a clearing in the forest, a crowd which stood a grove of stout camp-followers.

"Fastened to the trees by thick ropes were the intemperate remnants of what once had been human beings. How wretched they had been made! I shall never learn from telling you. I knew at once the history of that tragedy. And even as the thought flashed through my mind the *toi pan* uttered it in words.

"Tigers," he whispered, "Tigers."
Some of my *toi pan* were members of the Black Brotherhood, but they all shuddered at the frightful sight that confronted us. I put them all to work burying the dead and while they were at this task I counted the bodies. There were fifty-eight of them.

The *toi pan* came running across the clearing.

"Master," he cried, "one of them is still living."

"Impossible as this seemed, I hastened to where a group of the men were gathered around a writhing creature on the ground. I gave the poor torn one a big drink of rice cordial (*saucho*), and within a few moments he revived enough to talk.

"There were one hundred of us in rebellion against the Prince Wali King," he said, "and I defeated us in a short battle, and made fifty-eight prisoners. He gave an order, and we were led into this forest and tied to the trees. That was at the tenth hour of yesterday. All day long we stood still, looked to the strong trees, our bodies bruised by the ropes as we struggled to get free, our throats parched by thirst.

"At nightfall the tigers came. Many tigers. We could see them far off at first, walking about and looking their tails, and always coming a little nearer. When it was quite dark we could see their yellow eyes moving in the darkness, always creeping a little nearer. Some of our men tried to stand. They cried out like tigers—as much like tigers as they could.

"For a time the beasts were frightened by the fire, for they feared a trap. But at last one tiger plunged boldly through our circle and into the open space. Then another and another. The place was full of tigers. We could not see them clearly, but their eyes were staring like torches, and we could make out a great mass of bodies writhing and leaping over one another. They purred like cats.

"One tiger suddenly charged out of the mass and leaped upon my brother. My lord, he was dead at the first leap. Then another and another leaped and struck. What could we do but cry out? We are only men. I saw a great beast leaping at me, and I knew no more until you, my lord, gave me life out of a rap."

"My friends, that man died as he was speaking to us. I suppose the tiger that struck him left him to prey upon a larger man with more flesh, and that is why he survived so long. We buried all the victims, and hurried away. The tigers continued to follow us until we had crossed a great river. I hope never to look upon a tiger again."

The Edalji Case and British Justice

(Continued from page 235.)

to a former named Green, Harry Green, the farmer's son, a young man, signed a confession that he had himself killed the horse. This confession he afterwards repudiated, stating that "what had killed me of him by the police. But he did not go back in it until he had secured a ticket to South Africa. Not only did the police not prosecute him, but they continued at his leaving the country, and their conduct raised the unpleasant suspicion that they feared that his trial would bring out facts which would interfere with the conviction of Edalji.

Edalji's case when it came before Quarter Sessions was tried in the lower court by a man who had had no legal training. The

prisoner was convicted not only on the evidence at which I have glanced, but on the testimony of Mr. Thomas Gurney, the hand-writing expert, who gave it as his opinion that Edalji was the author of the anonymous letters. A year after he gave this evidence Mr. Gurney appeared before the Bench Committee, and had to admit the terrible fact that through his evidence an innocent man had suffered prolonged incarceration. It is therefore not impertinent to suggest that he may have been mistaken in the Edalji case as well. Looking at the facts as a whole, and especially at the fact that the outrages continued long after Edalji was in prison, it seems clear that the verdict was a gross miscarriage of justice. Many people thought so at the time, and immediately after the sentence of seven years was passed a movement was set on foot to reopen the case. As in the Beck affair, the Home Office remained stolidly obdurate. Edalji served three years in prison. Then an excellent series of articles in Mr. Labouchere's paper, *Truth*, shook officialdom and he was suddenly released. Since then Sir Comm Doyle has investigated the whole matter, and stirred public opinion to the point of forcing a commission of inquiry. That commission is now, as I write, dedicating on the case. It seems incredible that it should not find altogether in the accused man's favor.

NOTE.—Since Mr. Brooks's article was written, the cable has brought news of the fact that the Government Commission, which has been reviewing Edalji's case, has granted him a free pardon, admitting that he was severely convicted. It charges him by implication, however, with the authorship of the famous incriminating letters written to the police respecting the crime, despite the fact that Sir Comm Doyle, in his elaborate analysis of the case, demonstrated that there was no proof that Edalji wrote the letters.—KORROO.

Female Labor in France

Of the 37,730,000 population of France, statistics record a working population of 19,750,075, of whom 6,935,510 are women and girls. The number engaged in agricultural pursuits is 8,176,540, of whom 5,638,352 are women. Of the 1,822,820 people engaged in commerce, 689,999 are women, and of the 1,015,020 people employed in domestic pursuits 791,178 are female. Those engaged in industrial pursuits furnish employment to 5,810,855 people, of whom 2,124,642 are women. The percentage of females employed in four branches of labor is: Agriculture, 28; commerce, 35; domestic pursuits, 77; and learned professions, 33.

The Point of View

PAT is employed by a large manufacturing concern, whose plant is surrounded by extensive and exceedingly well-kept lawns, to operate an automobile grass-cutter, and while his motor would not create much interest in the Vanderbilt Cup Race, his ten-hours-a-day, six-days-a-week of steady travel runs into an impressive total of miles done.

One Sunday afternoon as Pat was enjoying a walk in the country, a friend came along, radiant in the possession of a new machine, and, slowing down as he copied Pat, invited the wayfarer to get in and ride.

Pat's reply was instantaneous. "Now, thank'y, I do that all week!"

Our Polar Governor

"I'm best if I see," said the Tammany politician, "that this fellow Peary wants to spend so much time and money travelling up into the frozen North just to discover the pole, when for three dollars he can buy a ticket for Albany."

"What's that got to do with the north pole?" demanded his co-e-e-e.

"He'll find it's twin brother up there," explained the Tammany politician. "That fellow Hughes would make it back like a bolting spring in Arkansas."

Signs

"I AM afraid," said the philosopher, "that at heart we are all Indians. For instance, when an Indian paints his cheeks in scarlet lines and dabs a yellow square on his forehead the world knows that he is in love. When he covers his face with zigzag black lines upon an ochre base it is his purpose to go out and consume all the strong waters he can find in ninety-seven counties."

"Well," said the listener, "what of it?"

"Similarly when you see a young man from the West with more millions than brains cornering the red-paint industry, laying in all the brushes, paibs, and mops he can put his hands on—"

"Yes!" asked the listener, breathlessly.

"You know he is going to leave home and mother to spend a quiet week in little old New York," said the philosopher.

MILK THAT IS WHOLESOME

Since the scientific handling and preservation of milk, originated by Lord Dufferin in the early '80s, the use of Eagle Brand Condensed Milk has become general, but for those persons whose unimpaired health is preferred, Borden's Sterilized Eagle Brand Evaporated Milk fits every requirement.

THE STATUS OF THE AUTOMOBILE IN ENGLAND, ITALY, AND BRAZIL.

ENGLAND is claimed to be the best market in the world for automobiles. Despite their enormous output in 1906, the home factories could not possibly supply a large part of the demand, and as the same condition may obtain during the present and succeeding years, it would seem to be opportune for American producers to obtain a share of this import trade, which now goes almost wholly to France.

At a recent exhibit of motor-cars in Liverpool, two or three American-built cars were displayed and attracted much favorable comment. The country surrounding Liverpool is so uneven and hilly that the electric runabout, so popular in America, is not found to be equally serviceable there. Nevertheless, for town uses, for professional and other calls and the transaction of routine business, it should be in demand, especially when the cost is considered and the ease with which the car can be manipulated. For driving in the country in the north of England a heavier car, with a different motive power, is preferred, on account of the frequency with which steep hills must be climbed.

While the interurban electric railroad of the American kind will probably never be extensively built in England, on account of the topography of the country and the inherent prejudice of the people, the motor omnibus, accommodating about the same number of people as the ordinary London omnibus, is being introduced in many parts of England. One or two lines of motor omnibuses have been established between Liverpool and outlying towns and districts, and additional lines will probably soon be inaugurated. The excellence of the English railroads, both as to safety and the frequency of service between the larger centres of business, will naturally limit the field of the motor passenger omnibus to short distances. The noise of the motor omnibus and the unpleasant odor it emits are seriously objected to, both in town and country, but the resulting convenience is rapidly overcoming all objections, although the omnibuses would certainly come into more general use if these were not so annoying.

In Italy the great wave of industrial activity which has swept over the nation during the past five years, of which the increase in the importations of coal and the somewhat feverish development of hydraulic power imply the importance, is nowhere more directly and fertile than in the development of the automobile industry. Turin stands at the head of this movement, which began in January, 1901, and on December 31, 1906, the companies

manufacturing automobiles and their accessories in Italy numbered 111, with a nominal capital of \$2,354,600 and a working capital of \$39,600,509. Of the 37 of these 111 companies that are situated in Turin, 23 manufacture automobiles, 8 manufacture automobile accessories, and 6 are engaged in automobile coach building. No less than 11 new companies for the manufacture of automobiles were founded in Turin during 1906, those formed in 1905 being 9. The progress of the past year has thus placed Turin beyond all question first among the automobile-building cities of the world.

The value of the automobiles built in Turin and exported to the United States during 1905 was \$124,558, and during 1906, \$235,718. During the same years the value of the automobiles exported from Italy to all countries was, respectively, \$699,409 and \$2,020,871. The United States thus took from Turin more than 29 per cent. of all the automobiles exported to all countries by Italy in 1905, and more than 12 per cent. of those exported in 1906.

In Brazil the number of American machines to be seen is constantly increasing, and the reputation of the cars of American make is becoming more and more favorable. Apparently the trade in Rio de Janeiro is veering to touring-cars almost exclusively, the demand for runabouts being almost all. Taste also runs to machines of a long wheel base with large seating capacity rather than great power or speed. There is still a disposition to give European machines the preference, chiefly because they were first introduced, but American machines are accepted when their merits are actually proved. While showy cars are popular and appearance has unusual weight, there is a good and growing field for medium power, strongly built, medium-priced machines like some of the American manufacturers are now producing.

The first auto buses placed in service in Rio de Janeiro have not been a success, but a different model is being considered, and it is thought that the mistakes of the management of the service so far can be avoided and a more successful result obtained. The service was maintained for a time on the Avenida Central, the great show avenue of the city, but the machines were very large and clumsy and failed to attract the expected crowds. On the other hand, there are a large number of machines let for hire by the hour or by the trip at high rates, which are popular, and whose owners are doing a very satisfactory business.

If You Asked the Bride She Would Say

Strange Disappearance of the American Horse

ANTIQUES and motorists may lead in time to the second disappearance of the horse, which once before became extinct in North and South America. Over three centuries ago, at the Spanish Conquest, there was not to be found in the New World, so it has been practically proved, a single animal that answered to the horse. Horses, indeed, which the Spaniards brought with them to mount their cavalry were objects at first of great terror to the natives, who took them to be four-legged supernatural beings come purposely to aid the conquerors. Yet recent research by the Whitney Mission has established beyond doubt that long before Columbus the Americans were merry by horses from the mountains of Alaska to the plains of Patagonia.

In 1826 the chance discovery in New Jersey of an equine fossil of an unknown kind led to more methodical investigation of America, with the result that prehistoric horse-bones have been found in California and Oregon; between the Gulf of Mexico and the Carolinas; in Texas, Florida, and the valleys of Mexico; in the heads of the Mississippi and on the western slopes of the Rocky Mountains. Horses, too, must have been numerous in this country previous to the appearance of man; researches having brought to light their fossilized remains mixed up with pottery and the stone arms of cave-dwellers.

How is it, then, that the equine race, represented in America by kind of fossil considerably more numerous than in Europe, came for a time to vanish from this country to reappear thousands of centuries later with the Spanish Conquest? For but a century after Cortez there were already in existence herds of wild horses in the regions of the Plata and the prairies of the Far West.

By some this temporary extinction of the American horse has been attributed to the increasing cold and the encroachments of the glacial hemisphere. It is certain that the elephant and camel disappeared at the same time. Another explanation is that the horses succumbed to a deadly such as the "rinderpest" in South Africa. Again, what brought about this extinction may possibly have been a species of the present-day Colombian vampire bat, which sucks the life-blood of its victims, and in the districts it infests prevents the horse being used as a beast of burden.

Ages

THERE is a Boston divine who enjoys a good cigar, and while on a recent trip to New York went into the smoking-car to indulge himself in a "weed." He had barely seated himself, when a young fellow came into the car, which was well filled, and seating himself beside the minister, drew forth and lighted a huge pipe which, from its strength, seemed to have received all the development which the youth lacked.

The young fellow evidently took the chances which his fellow passengers from time to time cast in his direction for those of admiration, for he presently took his pipe from his mouth, and, holding it lovingly in his hands, remarked:

"Hearty, isn't it? It was a birthday present to me."

"Indeed?" the minister responded with a pleasant smile. "But, you know," he added, "I should never have supposed you were so old as that."

High Finance

"I HAVE a bookkeeper in my office who is evidently destined to be one of our future captains of finance, all right," a broker remarked the other day. "He is a good clerk, but of late he has been late several times, and I had to call him down."

"You have been late three times already this week," I said. "What is the trouble—overleeping yourself?"

"No, sir; and I am very sorry," he answered. "I will try not to let it happen again. It has been due to the fact that I have been walking to the office instead of riding."

"Think the exercise does you good?" I asked him.

"No, sir; rather a matter of economy," he explained. "Even small sums count to me, you see, and I have already saved enough to have my shoes re-soled."

Lea & Perrins' Sauce

THE ORIGINAL WORCESTERSHIRE

For broiled chops, steaks, cutlets, etc., no seasoning is required, save butter and Lea & Perrins' Sauce. Add to the gravy one or two tablespoonsful of Lea & Perrins' Sauce before pouring it over the meat.

THE INCOMPARABLE WHITE

THE CAR FOR SERVICE

THE TOURING SUPREMACY OF THE WHITE

After a brief experience with the White, the average owner has gained such confidence in its supreme reliability and its ability to traverse any sort of a road, that he plans his tours without any thought as to whether the roads are good, bad, or indifferent. He knows that his tires will last much longer than on any other car of similar size or power. He is independent of everything except an occasional source of gasoline supply.

As an indication of the ceaseless touring activities of White owners, it is significant that, in many remote regions of this country and of foreign lands, the people think that all automobiles are propelled by steam-power. This conclusion is a natural result of their having seen no other automobiles but White Steamers.

Drive a WHITE, and see the country as you have never seen it before.

Curiosities of the Servant Question in New Zealand

In connection with the advanced position taken by labor in New Zealand it may be interesting to note the attitude of the domestic servants of that colony. A union has been formed which, through its secretary at Wellington, sent out circulars to housewives, informing them of the "claims" of the Domestic Workers' Union, and expressing the hope that their reasonableness would be acknowledged by signing the agreement accompanying the circular letter, which informs those concerned that "by so doing you will obviate the unpleasantness of appearing personally or by agent before the Conciliation Board or Arbitration Court." Following are among the "claims" set forth in a circular:

The week's work shall consist of sixty-eight hours, to be divided as follows: Work to commence every morning, except holidays, at 6.30 A. M., and cease on Mondays, Tuesdays, Fridays, and Saturdays at 7.30 P. M., with three intervals of one-half hour each for meals, and one hour's interval in the afternoon of each day.

On Thursdays work shall cease at 2 P. M., with two intervals of one-half hour each for meals.

On Sundays work shall cease at 2 P. M., with two intervals of half an hour each for meals, but domestic shall, if required, prepare tea between the hours of 5.30 P. M. and 6.30 P. M. on alternate Sundays.

On Wednesdays work shall cease at 10 P. M., with three intervals of half an hour each for meals and one hour interval in the afternoon.

On Sundays two hours shall be allowed to attend church in the morning.

Christmas Day, Boxing Day, New Year's Day, King's Birthday, Prince of Wales' Birthday, Anniversary Day, Easter Monday, Labor Day, and all statutory holidays shall be deemed to be holidays, and work done on such days shall be paid for at the rate of 1 shilling (24 cents) per hour.

Domestics shall be in every evening at 10 P. M., except Thursdays, and on that night at 12 P. M.

To what extent these "claims" have been acknowledged has not yet transpired.

Absent Treatment

A WOMAN prominent in Philadelphia and a leading member of a club there is the main figure in a story that illustrates her somewhat indiscriminate charity.

"I have so much sympathy for these poor street musicians," said she one day to a colleague at the club. "I give one Italian and his wife fifty cents every week regularly. They play in front of my house every Thursday, nine or eleven."

"I should imagine that would be most irksome," suggested the friend. "Think of listening to that horrible street piano during a lengthy interval one day every week!"

"Oh, my mind has to look out for that," explained the charitably disposed woman. "Thursday is my day at the club, you know!"

In Doubt

A CERTAIN young man who, according to all the accepted notions, should be very happy at this time was fazed by a friend, the other day, with a somewhat troubled look upon his face.

"I have a little matter, old man! Haven't had a tilt, have you?" the friend inquired.

"N—no," was the reply, accompanied by a sigh. "Fact is," he continued, in a burst of confidence, "I've been thinking over a little remark Alice made last night."

"Oh, perhaps you misunderstood," the friend suggested, encouragingly.

"I hope so," was the reply. "You see, we were talking of—well, how things would be, you know, and Alice said—"

"And won't he be just too sweet: you will come home all tired out from your last day's work, and hold me on your lap for hours, and read to me, and drive all my cares away, and dry my tears, and rub my head—and it will be just like a novel!"

What Prominent Men are Saying of this New Book—

The Future in America

By H. G. WELLS

BOOKER T. WASHINGTON—"I have read with cordial interest Mr. H. G. Wells's *Future in America*. He has written with an alert, open mind, and has discriminatingly set forth in his admirable study the trend of American institutions. I find myself with him especially in his deep sympathy with those parts of our American citizenship that most deserve and need at this time the helpful sympathy of all good citizens."

A. CONAN DOYLE—"I think there is as much wisdom and political insight in Wells's *Future in America* as in any book I have ever read."

FRANKLIN H. GIDDINGS—"Mr. Wells's observations are so keen, his style is so vivacious, Professor of Sociology, Columbia University and his humor so kindly that his study of the future in America appeals to a multitude of readers merely by its interest and charm. But to the thoughtful it is far more than so much good reading. It is safe to say that Mr. Wells is one of the ten or twelve most up-to-date men just now alive, and in his 'search after realities' he has found and described some realities here in the United States that we shall do well to face and examine. Impressionistic as it is, Mr. Wells's volume is quite as serious a challenge to sober thought as Mr. Bryce's more detailed and conventional account of our institutions."

ROBERT C. OGDEN—"The sympathetic spirit of Mr. Wells's study of American conditions stamps his work with a winning note of sincerity. The book is stimulating, instructive, interesting. It should be carefully read by every American with a weary head and an anxious heart concerning present-day problems in this country. The chapter on the 'Tragedy of Color' is impressive and masterful."

COMMENT

A Democrat of Presidential Size

Our country has two great political organizations, one or the other of which will elect our next President. It is of the highest importance that both of them should be maintained in a condition of vigorous and responsible efficiency, so that whenever the people become dissatisfied with the policies or administrative labors of one, they may find a safe alternative in the other. It is now ten years since the Federal government ceased to be in the charge of the Democrats, and during that period they have been out of office also in most of the Northern States. For these reasons, and because of the division in the party on the silver question, it has been a bad decade for the development of Democratic leaders. The able men of the Republican party have come to the front in ample number, filling conspicuous places in the government, making reputations for themselves, and becoming widely known to the general public. Not so with the Democrats. To them the Federal service has been pretty much closed, and only in Congress and in some of the State governments have Democratic leaders kept in sight. The one professing Democrat who has never been overlooked by his party is Mr. Bayne, and it is natural enough that to a very considerable army of Democratic voters it should seem that he is the only Democrat of Presidential dimensions that exists. But there are other Presidential Democrats besides Mr. Bayne, and it is highly desirable that the Democratic public should cultivate their acquaintance. One of them is Senator DANIEL of Virginia, a man whom every one who has an interest at stake in the next Presidential election ought to know all about. A correspondent of the WEEKLY has been to see him at his home in Lynchburg, and tells on another page such details about his life and opinions as, we trust, will make the readers of the WEEKLY feel that they knew him better.

The President's Recent Remarks

When the President made his tour through the Middle West he delivered speeches which permitted various interpretations, and advantage has been taken of the permission. His speech on the railroads, elsewhere considered, contained a number of sound and conservative reflections and reassuring promises. It is worth while to gather these together and to present them in their fullness, especially since to a large degree they are acceptances of ascriptions made by railroad managers and by others familiar with the railroad business. When made by this class of the community they have been derided and denounced as coming from tainted sources; and even within a week or two we have heard from ardent lips that any one who defends the railroads for any practice or even custom is presumably saying, for pay, that which he does not believe in his heart. We will endeavor to present unobscured some statements, not on their merits only, but because they for-

mulate truths that are now accepted by Mr. ROOSEVELT. Here are a few specimens. "Railroads should be permitted and encouraged to make traffic agreements;" the President asks only for such laws as those of Massachusetts and of England, meaning laws insuring publicity, and content with the result that publicity alone secures; "there has been much wild talk as to the extent of the overcapitalization of our railroads;" the census reports and the reports of the Interstate Commerce Commission "show that, as a whole, the railroad property of the country is worth as much as the securities representing it;" the real value of railroad securities in the opinion of investors is "greater than their total face value," notwithstanding any "water" that may formerly have been squeezed into them; the "great mass of our railroad securities rest upon safe and solid foundation;" it would not be equitable to base rates entirely upon the physical valuation of railroads; the great need of the hour is increase of railroad facilities; government ought not, by legislation or administration, to make railroads unprofitable to the investor in its attempt to compel improved service to the shipper.

The President's Paternalism

These were some of the statements made by the President at the unveiling of General LAYTON's monument at Indianapolis. It is well that we thus have the promise that those who always think as Mr. ROOSEVELT thinks will now be led to see some soundness in the position of those who do not believe that indiscriminate slaughter of the railroads is the proper punishment for railroad mismanagement. Mr. ROOSEVELT's remarks of the kind referred to were accompanied by just reproaches of railroad slanders, by proper expressions of indignation against railroad-wreckers and of prize-worthy determination to punish them. There was also apparent the well-understood intention of the President to give by legislation to the Federal government power to compel the railroads to submit themselves to the control of the government—that is, of the politicians who will be commissioners. What the President said about overcapitalization, about the necessity of prudence on the part of the government in exercising its control, and on the propriety of caring for the rights of the investors is sound and true, but it is also clear from the speech that the President, though declaring it to be inadvisable for the government to undertake to direct the physical operation of railways, believes that the railroads cannot be well managed except by a paternal Federal government. He believes that government ought to have the power to supervise and control the railroad business as, to use his own image, it oversees the national banks. No evidence of the constant failure of government in the business enterprises in which it embarks can convince him that a paternal Federal power cannot manage better than the owners of the roads. As a matter of fact, the banks are not prosperous because government undertakes to keep them from failure, but because their expert managers conduct their essential banking business unimpeded by ineffectual politicians. And these latter do not even prevent the failures that they ought to make well-nigh impossible.

Can Mr. Roosevelt Be Conservative?

No one who wisely and justly operates a railroad objects to proper public supervision, but supervision and publicity are not control, any more than they are ownership and operation. Every one will approve of the enforcement of the law against "predatory plutocracy" as well as against "predatory poverty," but it is perfectly true that danger and corruption are the natural fruits of too much government supervision. The rights of investors in railroad securities are tied up with the rights of the shippers. Government cannot pass laws which will injure the one which will not eventually bring disaster to the other. It cannot make the roads unprofitable without impairing or perhaps destroying their usefulness to the communities through which they run. The difficulty has been that Mr. ROOSEVELT's previous remarks on railroads and railroad management have led a good many people to believe that he would have undue supervision, and some of his messages and speeches support this conclusion. Some of the States also, doubting his intention to escape from the fate with which Mr. ROOSEVELT threatened them, have followed what they supposed to be Mr. ROOSEVELT's theories, and have passed legislation that would deprive investors of dividends and shippers of needed facilities. It is well that Mr. ROOSEVELT sees the

necessity of warning his hot-headed followers who have thought to get safely into his fold as they scurried away from Mr. ROOSEVELT's threats. They have, indeed, gone much too far, and now, perhaps, more than Mr. ROOSEVELT is needed to bring them back to a realizing sense that an indiscriminate war on railroads threatens every business interest, corporate or individual, in the country. How far Mr. ROOSEVELT's influence has worked in the direction from which he now calls back his followers is indicated by the tendency to doubt if his conservative utterances mean precisely what they seem to signify. They are read together with arguments for Federal paternalism and Federal incorporation, and especially in the baleful light coming from the President's acceptance of the suggestion that the United States may take control of all roads—even intrastate roads—under the constitutional provision giving it power to "establish post-offices and post-roads." "Any one who believes that this clause authorizes the United States to take control of a railroad by declaring it to be a 'post-road' will believe that it may assume full control of a building by renting a room in it for a 'post-office.'" And men will be reluctant to believe that such a mind would conservatively apply those conservative theories with which Mr. ROOSEVELT graced his Indianapolis speech.

The President at Lansing

The President's address on May 31 at Lansing, Michigan, at the celebration of the fiftieth anniversary of the Michigan State Agricultural College, came too close after his speech about the railroads to get so much attention as it would otherwise have had. He dwelt upon the need of better industrial training for the ordinary American skilled workman. We have tended, curiously enough, in our industrial training, he said, to devote our energies to producing high-grade men at the top rather than in the ranks. Our schools, he found, tend rather to train away from the shop, the forge, and the farm. He would have much more attention paid to making efficient mechanics and farmers, and more done to make farm life attractive to capable people.

Mr. Bryan's Statesmanship

Mr. BRYAN sees some evil in the "new rate law." He refers, probably, to the effect of enforcing the old anti-trust law. He says that the railroads now get the money which they have been giving in the form of rebates. He is also grieved by one effect of the law forbidding the granting of railroad passes. He says that the railroads now get the money from those who used to travel free. He further says, or so he is reported, "When I find a man who is constantly talking against government ownership of railroads, I believe that he is doing it from his own interests." This was all said in a speech which Mr. BRYAN made at Norfolk, Virginia. In the same speech he is reported as suggesting that the South should recall the fact that although it gives more electoral votes than the North to a Democratic candidate, the North gives the larger Democratic popular vote. It is unnecessary to comment elaborately on these nuggets. The man who recasts that one who has wickedly bribed another, and has been driven from his offending for the future, will hereafter get his honest dues, is quite capable of counting a big minority as important in an election as a small majority; while one who is convinced that another is a self-seeking and perhaps a corrupt man because that other differs from him, must often be struck with the ubiquitousness of greed and self-seeking when he reads the returns of elections in which he has been the leading candidate.

Mr. Taft on the Tariff

Mr. TAFT has invited the wrath of all Republican "stand-patters" by declaring that he is in favor of a revision of the tariff. All stand-patters, whether they are for doing nothing, for "leaving well enough alone," because they fear that a change will injure their business, or reduce the number of their votes, are opposed to this sort of talk. Mr. TAFT doubtless believes in revision; perhaps he believes in a real revision in behalf of the consumer, and of the manufacturer whose raw material is made expensive for him by the present tariff. He has not indicated, however, the nature of the changes that he would favor, nor do we know whether he has given any study whatever to the question. We are inclined to agree

with JEROME HARRIS, Mr. TAFT's fellow citizen, Mr. CLEVELAND's Attorney-General, and the candidate of some for the Democratic Presidential nomination in 1908. He says that those who made this tariff cannot revise it, as it ought to be revised, in the interest of the consumer; and it is undoubtedly true that most professed Republican tariff-reformers must be taken with a ton or two of salt.

The Public Utilities Bill

When Mayor McCLELLAN vetoed the Public Utilities bill he may or may not have stated a good reason for his action; but he was very far from committing the crime against progress of which he was pretty generally accused. The bill was never adequately debated by the Legislature. So far as it was discussed at all, those who opposed it were pleasantly alluded to as servants of the corporations; and in certain quarters it has grown to be the fashion to disbelieve anything said by a man whose interests are involved in the question under consideration, unless he be a protected manufacturer or a politician in search of popular favor. Nevertheless, the bill was discussed very ably by Mr. CHRYSTIE and others when it was in committee, and the character of the arguments as well as the character of those who made them demanded a consideration which the measure did not receive in the Legislature, but which it will doubtless receive in the courts if it ever reaches the judges. It may be the kind of legislation which the people of New York desire—we are not now discussing that question—but it was passed by both Houses of the Legislature as no such measure should be passed. The bill provides for the appointment of a commission with powers that exceed those of any body of men that have existed in a free country since the days of the court of Star Chamber. This commission not only decides upon all applications for franchises—in the streets of a city as well as through the State—but no railroad corporation is to be permitted to issue a security or a promissory note without first obtaining the consent of the commission. Not only is the existence of the roads and their power to increase their usefulness in the control of these commissioners, but they are to direct all operation, repairs, switches, turnouts, number of cars of each train; they are to make rules and regulations for employees, and they are to have the right in order extensions that may ruin the roads. The officers of the roads are to lose all real responsibility to the stockholders, and to be responsible to commissioners who, in turn, are to be responsible to the Governor alone.

The Splendid Possibilities for Graft

No legislation was ever suggested that contained a greater potency for "graft." Its richness is beyond calculation. Governor HAVENS may be trusted to make excellent appointments—as excellent as conditions will permit, for we know from our experiences in Panama the difficulty of retaining expert services in public employment; but what is to come after him? The country has learned from bitter experience that laws which give public officials something to sell are likely to do the devil's work—from laws that put the lip-sworder in the policeman's power to laws that give officers of the government an opportunity to blackmail business. It is not very long ago that Governor HAVENS himself was convinced, as a result of his own efforts, that a law which puts insurance companies at the mercy of a politician holding an office bred crime. He would remove an officer who took advantage of his opportunity; but his predecessors had not made removals for such a cause, and high-placed leaders of political parties had used the law and the office to make it worth the while of insurance companies to contribute liberally to campaign funds. There is no soil in our political garden so rich for the growth of noxious weeds as the Public Utilities bill, and the Mayor did his duty in calling attention to it. At any rate, the history of the measure illustrates the difference between legislation and edict. We ought not to desire our laws made in this way, and we ought not to desire such a law.

The South on the Presidency

The search for a Southern Democrat for President continues with an eagerness that indicates a growing belief that the party is not tied to one man only. The last announcement we have seen is that of the Memphis *Commercial Appeal*, which names General LEWIS E. WADSWORTH, now ambassador to Japan. General WADSWORTH was at one time acting Governor

of the Philippines, but the *Memphis Commercial Appeal* would probably not have mentioned him at the suggestion either of President ROOSEVELT or of Mr. TAPPAN, with whose policies General WRIGHT has been in entire accord so far as the work of governing the Philippines is concerned. Otherwise, General WRIGHT has always been a Democrat in essentials, and is a gentleman of high character and of many accomplishments. Tennessee may present him without misgiving; and so may Mississippi name JOHN SHELBY WILLIAMS, and Missouri JOSEPH W. FOLK, both of whose names were omitted in our recent list of candidates suggested by the South. There is something stimulating in this interesting recognition by the South of its right to expect the country to receive a Southern candidate for the Presidency on the same terms on which Northern candidates are received. And it is well to repeat that any candidate or any party that would endeavor to defeat an opposing candidate because he comes from the South would themselves deserve defeat for thus reviving the passions of the war.

Senator Beveridge Misquoted

SENATOR BEVERIDGE objects to our statement that in his Galena speech he asserted that "States' rights" is nowhere to be found in the Constitution. He tells us that what he said was that it was "not found in the original Constitution, but was added by amendment." It is greatly to be regretted that any wrong was done to Senator BEVERIDGE, but the wrong is not ours; it was due to the printed broadside containing the speech in full—a broadside that looked as if it were furnished to the newspapers. Mr. BEVERIDGE, then, did not say what this broadside, or our reading of it, asserted. He said that "States' rights" was not in the original Constitution, but in the Tenth Amendment. So, therefore, it is not of much account. It pertains to the imbecility, then, which characterizes the provisions insinuating upon religious freedom; freedom of the press; the rights of peaceably assembling and petitioning; security of persons, houses, papers, and effects against unreasonable searches and seizures; jury trial, etc., etc. All these rights are asserted in amendments, just as is the reservation of rights to the States or the people. If this last is of no account because it is expressed in an amendment, neither are the others; neither are the rights of the Thirteenth, Fourteenth, and Fifteenth amendments. Mr. BEVERIDGE is entitled to this full repudiation; but we must add that if the Tenth Amendment were not in existence, "all powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." When explicit powers are granted, all but those not necessarily implied from them are reserved to those granting the powers—the States. There was no need of the Tenth Amendment. "States' rights" was in without it.

The New "International Law Quarterly"

The lately published second number of the *International Law Quarterly* contains—in addition to interesting editorial comments on a number of the topics with which it is the specific province of the new quarterly to deal—at least three important articles, namely: the address delivered by Secretary ROOR on the real question underlying the Japanese treaty and the San Francisco school-board resolution; secondly, a survey of the recent development of international law, by ex-Secretary-of-State OLNEY; and, lastly, an exposition of the precedent-making convention of 1907 between the United States and the Dominican Republic, by Dr. JACOB B. HILLMAN, than whom no man is more qualified to discuss the subject. The gist of Mr. ROOR's address, which justly occupies the leading position and which cannot be read too attentively, is the demonstration that beneath all technical inquiries as to whether the discriminating resolution of the San Francisco school board was valid or not, or as to whether Japan's claims concerning the status of Japanese pupils in the schools of California were or were not well founded, lies the fundamental and grave question. What state of feeling would be created between the great body of the people of the United States and the great body of the people of Japan as a result of unfriendly or unsympathetic treatment given to Japanese residents in this country? What would be the effect upon the Japanese of discourtesy or insult in the columns of American newspapers or from the platform of American public meetings? What would be the effect upon our own people of the high-spirited

responses that natural resentment for such treatment might elicit from the Japanese?

The People Determine Friendships

The admittance question is timely, though as yet, outside of San Francisco, there has been no reviling of the Japanese in newspapers or public meetings. Anomaly it would be deplorable if in future years the exceptionally friendly sentiments that have obtained between Japan and the United States were to be replaced by angry and vindictive feelings. It will be no fault of our Federal government should a change so regrettable occur. The whole blame for it will rest upon the shoulders of our citizens, who do not realize the responsibility which inevitably devolves upon them under our democratic form of government. It is the truth, though the masses of our people are not alive to it, that in a democracy it is not the government but the citizens that bring about friendship or dislike, sympathy or discord, peace or war between nations. In our own day, through the myriad columns of the press and the messages flashed over countless wires, multitude calls to multitude across boundaries and oceans, in courtesy or insult, in amity or in defiance. As things are now, the people of a given commonwealth who permit themselves to treat the people of another country with discourtesy and insolence are surely sowing the wind to reap the whirlwind, for a world of sullen and revengeful hatred can never be a world of peace. Secretary ROOR has learned by official experience that against the generation of hostile feelings treaties are waste paper and diplomacy an empty form.

A Grand Notice for Dr. Long

Not since PASTOR WALKER has any writer got so valuable a notice from the President as Mr. LONG, the "animal writer." It is delightful to see the pleasure he is getting out of it. We are not expert in the knowledge of natural history, but Mr. LONG's handling of Mr. ROOSEVELT looks to us very like the dealings of a professional with an amateur. Mr. ROOSEVELT is the greatest amateur on earth; an amateur of spelling, natural history, signs, railroads, military science, anthropology, mendacity, history, farming, ethics, sports, constitutional law—indeed, of all knowledge. The range of his information is extraordinary. So is his readiness in the use of it, and his ability to assimilate a new branch "while you wait." As the greatest living master of half-knowledge he is a brilliant and wonderful figure. Half-knowledge is all the most of us have about anything, and it is by no means to be despised. The bulk of the fruit of current education is half-knowledge. All that is necessary to make it vastly useful and entertaining is that its possessor should recognize it for what it is. But there or thereabouts lies a snare, and one in which, it seems to us, Mr. ROOSEVELT is apt to get himself entangled. Every now and then, in the confidence begotten of a quick mind and fervent energy, he falls into the mistake of thinking for a moment that he knows all about something, and on that subject lays down the law. On one subject, politics, we credit him with knowing about all there is to know, but we do not recall any other branch in which his rating would be higher than that of an able amateur.

The Cotton Rabbit Goes for the Teddy Bear

Undoubtedly Mr. ROOSEVELT knows a good deal about animals, but it was a mistake for him to tackle Dr. LONG, because animals are Dr. LONG's specialty, and while neither he nor any one else knows all about them, it is easy for him to make it appear that he knows more about them than Mr. ROOSEVELT does. He has time for the work, he is a good writer, his cause is just, and the newspapers seem ready to give him all the space he wants. If he has not already succeeded in making Mr. ROOSEVELT regret that he attacked him, it must be because Mr. ROOSEVELT so delights in a fight that he can enjoy seeing another fighter get his exercise at his expense. It is very funny and very interesting—a sort of battle to a finish between the cotton rabbit and the toby bear—and there is every prospect that it will result in making Dr. LONG a Presidential candidate on the Mollycoddle ticket.

The Mollycoddle Ticket

For President,
Fire-alarm FOREVER.
For Vice-President,
Nature-fair LOON.

Mr. Roosevelt's Latest Speeches

ALTHOUGH advance copies of the speech to be delivered by the President on May 30 at Indianapolis had been current for some days, they had been confined to Wall Street, and there is no doubt that the utterance was awaited throughout the country with eagerness, not to say anxiety. Would he aggravate, or would he allay, the increasing impatience concerning the actual and prospective prices of standard railway securities? Would he assert, or would he precipitate, a panic in railway shares? This was a question which interested deeply not only the thrifty citizens who had invested their savings in railway stocks and bonds, but also the vast multitude of producers whose means of conveying their commodities to markets have been crippled severely during the last twelvemonth by a deficiency of railway trackage and rolling stock. It is doubtful whether the declarations of any preceding Chief Magistrate, even those that came from ANDREW JACKSON during the Nullification crisis or in the course of his duel with the United States Bank, have been more earnestly scanned and pondered than those which were made on May 30 by Mr. ROOSEVELT at Indianapolis, and at the State Agricultural College at Lansing, Michigan. We also have examined the speeches with care, and we must own ourselves unable to extract from them unalloyed and consistent teaching. It is quite possible to cull from them sentences here and there which, when taken apart from the respective contexts, and without reference to juxtaposed assertions of a very different tenor, could hardly fail to discourage profoundly those who had hoped to hear something calculated to restore public confidence in the value of railway securities and in the present and future management of American railways.

It is no less possible to select passages which, viewed solely by themselves and in exclusive connection with such other, might well tend to arouse and diffuse an optimistic sentiment with relation to the financial and industrial prospects of the United States.

Let us review, first, such features of Mr. ROOSEVELT's exposition as may seem, at first sight, to justify an optimistic view of the existing situation. For example, at Indianapolis, Mr. Roosevelt pointed out that great social and industrial problems confront us, but he added that their solution demands, on our part, not only unflinching courage, but also a wise, good-natured self-restraint, so that, on the one hand, we shall neither be daunted by difficulties, nor, on the other hand, be misled into showing either rashness or vindictiveness. Elsewhere, in the same speech, the President, while insisting upon Federal control and regulation of interstate railways, declared that railroads should not be prohibited from acquiring connecting lines by buying the stocks, bonds, or other securities of such lines; provided, of course, these lines were not parallel and competing. He even advocated an amendment of the existing law whereby railways should be permitted and encouraged to make traffic agreements when these should be in the interest of the general public as well as of the railway corporations making them. Repeating the avowal that the aim of his railway policy was in no way punitive or vindictive, he announced that he would be the first to protest against a confiscation of property in any guise, and he expressed a conviction that the United States Supreme Court could be trusted to see to it that nothing should be done under the pretence of regulating railways to destroy property without just compensation or without due process of law. The rights of innocent investors should not, he said, be jeopardized by legislation or executive action, one would say patriotic statesman sanction laws which would fall heavily on them, instead of on the original wrongdoers or beneficiaries by the wrong. Mr. ROOSEVELT also clearly recognized that there must be as such rigorous statutes as will prevent the development of the country, a development attainable only when to investors is offered no ample reward for the risk they take. He willingly acknowledged that the men who build a great railway and the men who invest in it render a great public service, for the reason that adequate transportation facilities are of vital necessity to the republic. Therefore, he justifies, he said, to make it in the interest of the investor to put his money into the honest expansion of railways. Mr. ROOSEVELT conceded with equal frankness that there has been much wild talk as to the extent of the overcapitalization of American railways, viewed as a whole. He cited the census reports on the commercial value of American railways, together with the reports made to the Interstate Commerce Commission by railways on their cost of construction, as tending to show that, considered collectively, the railway property of the commonwealth is actually worth to-day as much as the face value of the stocks and bonds representing it, notwithstanding the "water" that may have been injected in particular places. Finally, the President advocated ample provision by Congress to enable the Interstate Commerce Commission to undertake the physical valuation of every railway in the country, in order to render it possible to determine the reasonableness of future extensions of capitalization. Mr. ROOSEVELT directed attention to the fact that such a valuation would help to protect the railroads against the imposition by State or Federal authority of inadequate and unjust rates, and would, therefore, be as important from the view-point of a rail-

road's safeguarding as from the view-point of the public's protection. At the same time, the President conceded that the effect of such valuation and supervision of securities must not in any case be retroactive. Existing securities must be tested by the laws in existence at the time of their issuance. This nation, in a word, was no more to injure securities which have become an important part of the nation's wealth than it would consider a proposal to regulate the public debt. All that the public interest requires is a guarantee against improper multiplication of securities in the future.

Now, if this were substantially all that the President had said at Indianapolis and Lansing, there would be but little warrant for drawing slender arguments from his declarations, I unhappily, we cannot overlook some remarks of a much less satisfactory tenor. Few, indeed, will quarrel with the abstract avowal that the rights of property are in no more jeopardy from the Socialists and the anarchists than they are from the predatory mass of wealth, and that the power of the nation must be exerted to stop crimes of causing no less than crimes of violence. The President, however, seems to contemplate retroactive, punitive, and vindictive administration, if not legislation, when he says that any man who has loaded railway properties with obligations and pocketed the money instead of spending it in improvements, or who has risked the capital of railways in the hazards of speculation, should be held to a criminal accountability. As a matter of course, he says, we shall punish any criminal whom we can convict under the law. Most certainly, he adds, there will be no relaxation by the Federal authorities in the effort to get at any great railroad-wrecker, any man who, by clever swindling devices, robs investors, oppresses wage-workers, and does injustice to the general public. There has been, Mr. ROOSEVELT says, a great deal of dishonest work by corporations in the past, and he promises that there shall not be the slightest let-up in the effort to hunt down and punish every dishonest man. How such a treacher, not to say rascals, treatment can be applied to past defections from the highest standard of equity without disturbing popular confidence in railway managers considered as a class, and without upsetting the public faith in the value of some recently issued railway securities, is not clearly and acceptably explained. If the President had said the book of the past is sealed, we upon a new volume to-day, the great body of investors, actual and prospective, would doubtless have breathed more freely. From the moment the President of the United States is apparently desirous of wreaking a personal grudge, and seems to have in view a particular individual who he enters upon a sweeping denunciation of past misconduct, and invokes for its condign punishment the vast resources of Federal power, he exposes his motives to suspicion and casts grave doubt upon his impartiality. There are lines in the speech made at Indianapolis which a certain railway magnate is unlikely to find acceptable reading, but the mass of disinterested onlookers and the great body of American producers and shippers would have been more edified and better pleased if the exposition of the railway policy of the administration had suggested no such direct and personal application. LOUIS XII. said that it would be unbecoming a King of France to remember the wrongs of a Duke of Brabant, and it is equally unworthy of an American Chief Magistrate to allow a private quarrel to shape or warp his public acts.

The Jamestown Exposition

THE Jamestown Exposition has been having a hard time with the New York papers of late. Its faults have been glaringly proclaimed, despite the interesting fact (as told last week in the WEEKLY) that the New York State House is far from complete, and the government pier the most incomplete structure of all. And its virtues have been overlooked or dimmed with faint praise. So to settle the matter once and for all, and to get its estimate of character, it sent for W. I. BUCHANAN, late of the Buffalo Pan-American Exposition and the right-hand man of DAVID R. FRANCIS at the St. Louis Fair. Mr. BUCHANAN says that the character and scope of the Exposition are vastly greater and more extensive than he had anticipated; that there are, indeed, certain features of the Exposition that are, in every sense, distinctly better than those of any Exposition since Chicago, notably the exhibits of the United States government; secondly, the States Exhibit Building, both of itself and the exhibits it contains, he thinks, surpass any State exhibits heretofore attempted. Even if nothing more were done to the buildings and their contents than had been done when Mr. BUCHANAN was there, there would still be a show worth looking at, for, he said, "there is vastly more to be seen and enjoyed in architectural beauty, in landscape and water effects, than any one has reason to expect."

Meanwhile a great deal has been done. Between three and four thousand men have been set to work completing the buildings, the roadways, walks, and grounds. Mr. JAMES M. HARR, the former successful president of the Seaboard Air Line Railroad, has been

made the head of the Exposition, and a new director of advertising has been appointed.

Virginians are not an excitable people; they never get nervous, and they do not hush. If the truth were known, the feeling that hustling is a little underbred has permeated the entire people, and they all go to an enterprise slowly; but when they begin, they stick to it. This is the Virginian characteristic; that they never give up an enterprise, a cause, a friend, or an enemy. If they take hold, they keep hold.

The entrance the Exposition has received have taken effect to get up Virginia's fighting blood. The Fair will be a greater success for the dull opening. As things stand now, it promises to be complete by the middle of June, and then, if the incessant rain will stop for a bit and the sun will shine, it will be difficult to imagine a more beautiful stretch of land than that lying along Sewell's Point, with the broad Hampton Roads waters stretching before it, the cool pine groves on either side, and the beautiful copices of lay and laurel bushes, the beds of pansies, tulips, narcissus, rhododendrons, and the roses everywhere. Apart from all other exhibits, the natural beauties are enough to attract visitors. It is impossible to give too much praise to Dr. WARREN MAXNER, the Massachusetts man who had not the lovely grounds and cleverly made all the wealth of indigenous plants and wild flowers that decorate the earth about this locality. Even the wild Adirondack lily carpets the charming thickets back of the Arts and Crafts village, and the mocking-birds and catbirds sing and robins and wrens twitter freely along the alarbes. The offering the Exposition makes to lovers of nature has, perhaps, been less dwelt upon than any other of its aspects, but it is one important enough not to be overlooked. And to real lovers of nature the winding paths and natural lanes amongst the pines and live-oaks will always be more lovely than the most careful and beautiful of formal gardens.

All together there is a great deal to tempt the sightseer to the Exposition, and perhaps to an intrepid traveler the greatest sight will be that of the land and its people, for in few places in the United States has a type been so long maintained without admixture of alien strain, and Virginians are almost as definitely a people and a type as Frenchmen or Germans. Undoubtedly a new cosmopolitanism must invade them before many more generations pass; perhaps this very Exposition will do its part toward inviting the new and the usual and obliterating the old; but while there remains a vestige of the old Virginia, as it once was, it is well worth a journey to see it.

Personal and Pertinent

The other day an Eastern college sent its baseball team—that's what they call the aggregate—upon a Western tour. Every college team goes around a circuit, just like the professionals, who are their pattern in some respects, as, for example, in the use of the English tongue. When the New England nine—shall I call the old name—returned, they were enthusiastic about our Western university. "Why," they said, "University is better than —; but there they talk baseball ALL the time!"

Many thousand men who were once schoolboys must have noted, with a stirring of old associations, the recent death of the venerable ALMER HARRISON, professor emeritus of languages in Brown University. For many years, beginning about 1878, the HARRISON Latin grammar and Latin texts were the prevailing companions of youth in the somewhat staid progress up the path of knowledge. Men who studied them as boys may never have attained to an affectionate regard for their author, but they all feel that they knew him intimately, and probably recognize now that it was not his fault that there is no royal road to learning.

The *Dial*, one of Chicago's most excellent papers, is embellished with an appreciative article on Sir OLIVER LOOMÉ's *The Fisherman of Faith* edited with a review, by T. D. A. COCKFIELD. In it there is this cleverness, whose those who, believing or doubting, are entertained by Sir OLIVER, will doubtless be glad to read. "There is an old saying," writes Mr. COCKFIELD, "that 'Except ye become as little children, ye shall in no wise enter the Kingdom of Heaven.' The teaching of Sir OLIVER LOOMÉ would seem to indicate that 'Except little children become as elderly philosophers, they shall in no wise enter the Kingdom of Heaven.' There are a good many people who will, with some show of reason, believe that there is not much difference between the two versions of the Master's words.

JOSEPH EDWARD SUMMERS, who has recently achieved the presidency of the New York Chamber of Commerce, has done what all men want to do, but which few men succeed in accomplishing. His ambition for many years has been to retire at present distinction, and he has arrived perfectly and without much trouble. Mr. SUMMERS did not start out in public life with the intention of becoming a leading man of business, or a man of

business at all. When he was graduated at Williams College, in the class of 1862, he went back to Troy to practise law in a town which has been justly celebrated for its law—MARTIN L. TOWNSEND, JOHN E. HALL, W. A. BEACH, are names that come back to veterans. But fate drew SUMMERS down to New York, where he made a fortune in Wall Street, and he became president of the Stock Exchange. Then he became president of a bank, a trustee of his college, an influential member of the Clearing House Committee which so judiciously broke the law in the currency-lamine panic. He is a Democrat, and somewhat of a politician. Once, when Democrats were sane, they talked of him, on different occasions, as Mayor of the city and Governor of the State. He was of that more almost forgotten old company of men who were friends of SAMUEL J. TILDEN. He has held some public offices, and is now on the Water Commission, the beneficent expenditure of which is expected to rival that of the Panama Canal. But Mr. SUMMERS, despite his business activities, has not lost the gift of speech which was his at college and at the bar.

Out in a large Western city all the people do not keep in touch with the necrology of their time. This is true of a good many other places, but it may not be true that there are many places where those who write for the newspapers are so busy with the droppings of the leaves that they cannot recall the fall of the giants of an older time. The other day Dr. WILLIAM EVERETT was to deliver a poem on an academic occasion in that city. The trouble with WILLIAM EVERETT is that he has nothing to recommend him except his mind, and for that sort of thing some newspapers have "no earthly use." Dr. EVERETT can sing most sweetly in numbers, whether in Latin, or English, or Italian, and he is famous in his small and immediate circle as the head master of Quincy, and among some Harvard men who achieved an education when they were in college, as the most interesting teacher of Latin they ever encountered. He was really going out to this city of the West to recite verses for the P. B. K. Society of its university, notwithstanding the terror of railroad journeys; but he found himself ill—his doctor did for him—and he was forced to give up the journey and the poem. Upon this the leading newspaper of the town remarked that "Ezraiah EVERETT, until lately president of Harvard College (Yale's annual victim at football), was to have delivered a speech at the university this afternoon, but he fell ill and he can't come; as the time was short no local substitute could be found. Mr. EVERETT is said to be one of the best-looking speakers in Boston." This may have been fun, but you can't tell. At any rate, the people who had expected to listen to Dr. WILLIAM EVERETT said that you couldn't expect anything better from that newspaper.

When Dr. WOLCOTT, one of the Harvard Corporation, says that he does not think that FARMING HOUSE is sufficiently academic to be President of Harvard University, he recalls a time when Professor MURKIN and others were urging Mr. ROOSEVELT's choice with a strenuousness worthy of their favor. Somehow or other the same sort of objection as that suggested by Dr. WOLCOTT occurred to the minds of others. One of the oldest professors of Harvard expressed it in this way:

"It would be interesting, would it not, to see the Yale spirit at the head of this venerable institution?"

It is not strange, but it is entertaining, to note the resemblances of mental impressions. At quite another time and at quite another place, something like that was said. It was the evening after the Yale bicentenary. At that celebration STRAMMAN (Yale) read the poem, and ROOSEVELT (Harvard) made a speech, and of the two some one said:

"It was interesting, wasn't it, that the Harvard culture should be represented by a Yale man, and the Yale spirit by a Harvard man?"

And how some one should think that these remarks are taken by the writer as indications of recent character, but as barriers to assert that those were but jests inspired by an apt occasion. Mr. ROOSEVELT would do some serious work in a college, and would be eminently instructive in a chair of history at Columbia, an opening which President BUTLER would like to make for him, for which Mr. ROOSEVELT would admit that no President was too big or any man's part too important.

Dr. WOLCOTT's rather superfluous disclosure was inspired by the President's remark to a delegation of Harvard graduates at Lansing, Michigan, that in a year and eleven months he expected to be an active member of the Harvard organization. No he will. Being then released from the cares of state he will be a free man again, and will not have to ask leave of anybody to go to Commencement, the boat races, the football games, the baseball games, or any other Harvard event. These exercises he cannot now attend without more disturbance to the equanimity of the country than he is often willing to occasion. So he stays away unless the prompting is very urgent. And when he comes to be President his activity as a Harvard alumnus will undoubtedly be very greatly intensified. As for being president of Harvard College, this idea has probably not been in President ROOSEVELT's mind for some years. It was talked about at one time, but not recently.

Correspondence

FOR JOSEPH FOLK FOR PRESIDENT

GAITHERSBURG, TEXAS, April 26, 1907.

To the Editor of *Hampden's Weekly*:

SIR,—Are you not wasting time, energy, and much like writing in trying to have Professor Wilson nominated for President? He may be the fittest, most capable man under the shining sun, but such fact is known to but few. He is identified with no great question which interests the people. Issues and events point nominations in such times as the present.

It seems to me that remedies now are very similar to those in 1876, when Tilden was nominated. He had broken up a corrupt ring in New York, been elected Governor, much good in that high office, and was selected because his name was associated with the spirit of reform then demanded by the people.

In Governor Folk, of Missouri, the Democrats have such a man. His career is along the same lines. He is strong with the people, also are again aroused to the need of reform by the revolution of graft and greed in public and corporate life. The people are looking for a leader capable of grappling the great trusts sapling our whole system. No more scoldard or talker will fill the bill. Bryan, Wilson, Judge Tamm, are cheap, capful characters, but Folk can get tens of thousands more votes than any other Democrat in these United States.

Let the slogan be Folk and reform. Special privileges in none, whether capitalist or laborer. He is a platform within himself. Take up Folk, Mr. Editor, and you can get help.

I am, sir,

SINER.

"THE BACKSLIDING OF PHILADELPHIA"

PHILADELPHIA, PA., May 7, 1907.

To the Editor of *Hampden's Weekly*:

SIR,—I have read carefully the article entitled, "The Backsliding of Philadelphia," in your issue of May 4. The title is truly indicative of the general condition as many see it to-day. The cartoons you publish did certainly appear in the local papers. Certain occurrences of minor importance that were within the knowledge of every one are accurately set forth. But aside from these, I think that it would be fair to say that the writer of the article has misrepresented generally the history of the City Party, and conditions in Philadelphia during the year preceding the election of February, 1907. I will ask that you will allow me to contradict one of the statements made, viz.:

"In Philadelphia, Stuart carried a majority of 22,000; Gillisney was defeated by a vote of 26,920."

The correct vote was:

Stuart	123,493
Emery	91,165
Gillisney	22,328
For District Attorney—	
Rosen	119,483
Gillisney	106,067
	12,908

While there was necessarily bitter feeling against John Weaver, you could not get any facts informed, sensible person to believe that the writer of your article brand Messrs. Blackburg, Tilden, and Carpenter, while on the stump, vent their spite on him "in unbecomingly terms" nor laid at him "unprintable epithets."

No one who was in the city during the campaign for the nomination for district attorney could truly say that Mr. Gillisney's nomination was "slid" by the reform leaders. The misfortune was that most of the leaders stood aloof from the contest. The only leaders that took part were on the Weaver side until a town meeting at the Academy of Music had demonstrated the Gillisney sentiment of the rank and file.

I am an admirer of Mr. Gillisney, but I do not write this article on that account, although I am glad to say that I know how untrue and unfair are the statements made about him. But he needs no defense by me or any one.

The City Party is necessary, however, far greater than any one man, and I believe that it is unfortunate that *Hampden's Weekly* should give prestige to an account of such a movement that reflects on the intentions and motives of sincere and intelligent men, none of whom proved themselves politicians of no mean ability.

I am, sir,

HARVEY T. SMITH.

AS TO THE LACK OF AMERICAN SHIPPING

ROCHESTER, N. Y., May 24, 1907.

To the Editor of *Hampden's Weekly*:

SIR,—In your paper of March 1st, you have an article headed, "Where American Enterprise has failed," which I have just read. Part of the reason for the failure is given in the article itself, which is a kind of the whole matter.

Our country with its hundreds of thousands of miles of railroads, and half as much more of inland and coastal waterways, besides the little of oceanways that we use, does about one-half of all the transportation that is done in the world. And it is simply a question of expediency whether we take our stuff to Texas, New York, Montana, Europe, or Asia—that is, across the ocean or by points in our own land. We are serving the "world's commerce" in either case. We have done what we undertook to do, and did it well. If ever we have a big country and many people to be served. A large part of the people are foreigners, also come to us

and get goods here instead of at home, giving us more commerce here and less across the water.

The plus and practice of our people have been to produce as much as possible, and to dispose of it all as quickly and to as good advantage as possible. Is it true that "American enterprise has failed" in any of these ways? Has any nation on earth ever succeeded so well, and accomplished as much for the world in the same length of time?

We are providing a haven and a home for thousands of immigrants coming to us every day. Ship loads of food have been sent in charity, a few needed across the waters. We cannot do all we are willing to be done. But we have sought to do first that which seemed the most important in the time.

This question is not new. It has come up at intervals for thirty years or more. Yet the enterprising Yankee nation goes right on doing that which seems to be for its best interests.

May be that in the future we shall find that the time has arrived when our ocean transportation could and should be done in American vessels, and then we shall be ready to do it.

I am, sir,

FRANK VAN DOORN.

A CALL FOR THOUGHTFUL PERSONS

HAIGHTON, TENN., May 21, 1907.

To the Editor of *Hampden's Weekly*:

SIR,—Will you kindly inform some of your readers who are those "thoughtful persons" that you so often refer to as deploring President Roosevelt's reckless course and desiring a return to "less sensational methods"? As the writer knows many honest men (not speculators) in different parts of the country and most of whom find any other view of the President's course but the very favorable, he leans to the opinion that the thoughtful citizens referred to are mostly of the so-called Wall Street variety. There is no doubt that such people have reason to feel very peculiar over the financial situation, and believe the President's course responsible for it, but wholesale reticence was exposed, and even *Hampden's Weekly* will some day admit that the cure was worth all it cost.

I am, sir,

F. C. WALTER.

"REAL MEN TO MAKE LAWS"

New York, May 26, 1907.

To the Editor of *Hampden's Weekly*:

SIR,—In an editorial comment, June 1, upon the passage of the Public Utilities Bill, under pressure of Governor Hughes and public sentiment, you say:

"If legislators have no more courage and independence than to legislate by command or through fear of public sentiment, it is high time to elect real men to make laws."

Is not the sentiment of the majority of voters in this country the "public sentiment" which governors and legislators obey and are elected to obey? Did not a majority of the voters elect Governor Hughes and the Republican majority of the Legislature? Would you be so kind as to point out how it is possible "to elect real men to make laws" in defiance of the very purpose for which they are elected? Is there any other way than for the "real men" to feed the voters, by making pledges and promises which they intend to break after they are elected?

I am, sir,

EDWARD G. HOLMES.

AN ENGLISH OPINION OF MARK TWAIN

(From the London Spectator)

Some thirty-five years ago Mr. Samuel Clemens, or Mark Twain, as it is pleasant to call him—was deputed by his fellow passengers to ask for recognition from the Royal Humane Society for the captain and the life boat crew of the steamer *Barataria* for saving life at sea. Quite characteristically, he asked for no reward for himself. He was satisfied if he had been of any service "standing around the deck in a furious storm, without an umbrella, keeping an eye on things and seeing that they were done right, and yelling whenever a shore seemed the important thing." That was enough for him; but what he asked for was recognition for the captain and the crew from the humane society, also, he would "be so remembering them increase the high honor and esteem in which the society is held all over the civilized world." Perhaps we may roughly the words to the position of the author at the present moment. Another "humane society" is proposing to confer a distinction upon an honored personage. The University of Oxford has offered an honorary degree to Mark Twain, which will be conferred upon him at the forthcoming commemoration, and it is refreshingly true that honoring the great American writer Oxford honors herself. . . . But he is, above all, the fearless upholder of all that is clean, noble, straightforward, innocent, and manly. If there is a certain meaning to the phrase "American journalism," which is distasteful to Englishmen, Mark Twain, of American writers, stands for all that Englishmen like best. He has his extravagances; some of his public, indiscreet visits on the Continent if he is a jester, he looks with the wrath of the happiest of Puritans; he has read much of English knightlyhood, and translated the best of it into his living pages; and he has assuredly already won a high degree in letters by having added more than any writer since Dickens to the glory of the empire of the English language.

A DEMOCRATIC PRESIDENTIAL POSSIBILITY

JOHN WARWICK DANIEL

THE SENIOR SENATOR FROM VIRGINIA

By WILLIAM INGLIS

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

LYNCHBURG, Va.

June 5, 1907

IN all the present talk about possible Democratic candidates for the Presidency in the campaign of 1908 one name leads all the rest—the name of John Warwick Daniel, of Virginia. Statesmen and editors vie with one another in generous rivalry as to who shall pay the highest tribute to this man, who has for thirty years led his party in his native State, who is renowned as much for wise conservatism as for fearless patriotism, and who, after twenty years of service in the Senate of the United States, is rich in influence but not in power.

The late George Prentiss Burr, after long association with

Mr. Daniel in the Senate, wrote of him: "I have been led to form a great respect for his intellectual qualities and for his sincere and far-sighted patriotism." Throughout the land for many years Mr. Daniel has been celebrated as an orator. It would be quite possible, upon reading the current references to him in the newspapers, to receive a wrong impression as to his personality—in other words, to conceive him, perhaps, as the ponderous, deliberative statesman whose massive mind crushes the spirits of all who come near, or the euphuistic rhetorician whose elaborate thoughts are too far and gone for human nature's daily food.

Mr. Daniel is neither the one nor the other, as this writer quickly found on a visit to Lynchburg, but a simple, kindly American gentleman, as democratic as your next-door neighbor, frank but not effusive in his greeting, plain-spoken and of few words, a man whose mental attitude toward his fellows is that of one who is alert to study rather than to teach. His manner is that combination of dignity and courtliness which for want of a better name we characterize as "old school," yet there is not even a suggestion of stiffness or formality.

Nothing could be less exciting than to meet this statesman. He does not merely wring your hand, and eagerly hope you are well, and say how happy he is to see you, and tell you enthusiastically all about yourself. On the contrary, his handshake is calm and firm, and a bit conditional. He looks the visitor squarely in the eye and declares he is glad to meet him. Moreover, he seems really glad, though not at all effusive, and there is that in the expression of his large, clear, dark eyes that bespeaks instant friendliness.

The senior Senator from Virginia is not above medium height. The old, undebatable record shows that he was born at Lynchburg, on September 5, 1812, but he is no brawny, robust, cheerful, breathes such an atmosphere of vitality, that one might well be deceived and not more than fifty years old. There is only the least touch of gray at the temples of the broad and symmetrical head. Breadth is the principal impression that one receives at the first

Senator Daniel in his Office on Main Street, Lynchburg, Virginia

glance—breadth at the top of the full and well-rounded brow, breadth throughout the face and especially at the chin, which juts well forward, the chin of the fighter. There is aquiline and high in the bridge, a dominant, combative nose, yet tapering at the point as becomes one of keen intuition and nice discrimination. The eyes are set far apart, round, full-lidded, deep-brown in color, and stand well out beneath bushy black brows. Thick and the broad, mobile mouth at once bespeaks the orator. The head is well poised above broad shoulders and deep chest. The Senator never goes about without crutches, for his left thigh was shattered by a Minie ball in the battle of the Wilderness, and though he can walk without aid it is never quite safe for him to discard these supports.

While Congress is in session Senator Daniel and his family stay in Washington. During the rest of the year they live at Westbury, an old-fashioned Virginia country place of some two hundred acres, about a mile west of the city limits. Just now, because of the illness of Mrs. Daniel, the family resides in town, occupying a modest

house in Federal Street, on the crest of one of Lynchburg's long hills. Between this house and his modest law-office in Main Street lies the Senator's daily routine. To go with him from one building to the other is to learn a lesson in friendliness: for every body along the way, whether young or old, man or woman, white or black, greets him with a cordial, "Morning, Major," or, "Evening, Major," as the case may be. And to each one he responds by name.

"The Major," is what they all call him at Lynchburg, just as if an one else ever held that title. Which, naturally enough, brings to mind his war record. Young Daniel was eighteen years old, a student at Lynchburg College, at the outbreak of the civil war, he immediately volunteered as a private in Wise Troop of cavalry. Early in the battles of Fredericksburg, Winchester, Gettysburg, Rappahannock Bridge, and Mine Run. In the battle of the Wilderness, on May 5, 1862, while rallying a regiment in Pickett's brigade, Major Daniel was struck by the rifle bullet that nearly killed him and put an end to his military service. After the war the Major was graduated in law at the University of Virginia, and in 1869 he became a leader of the Democratic party in Virginia. He found time to prepare two law books that are still quoted by authorities in the courts of the United States and even of

England—Daniel on *Attachments* and Daniel on *Negotiable Instruments*.

From being a leader to being the leader was a quick transition. He served two terms in the Virginia House of Delegates, was State Senator from 1875 to 1881, was elected Representative in Congress in 1882, and has been United States Senator continuously since 1887. His record reveals a continuous struggle for decency and honesty. When the Bradstreet tried to squirm out of paying the lawful debt of the State of Virginia, Major Daniel was one of their bitterest foes. He was one of the pioneers in the establishment of the free-school system in Virginia. In the Fifty-ninth Congress he secured the adoption of a motion giving the Southern States representation in the South-American congress at Rio de Janeiro.

He it was who lathered the legislation whereby the United States is establishing its own gunpowder factory, so as to be independent of private monopolies. It is due chiefly to his aid that the Jamestown Exposition has received national appropriations.

From the moment the civil war was ended Major Daniel has never lost an opportunity to reconcile North and South, to emphasize the unity of all the States in one nation. It is a fact worthy of note that, no matter which party is in power, Senator Daniel has always been able to influence legislation in favor of his State.

But to know the Senator at his best one should see him in his home city, busy, grave, preoccupied with law work or national legislation, yet never without time to be of service to his friends.

DEMOCRATIC ISSUES THAT POINT THE WAY TO VICTORY

By SENATOR DANIEL

Yea, ask me to answer a question. I make the effort to do so with diffidence, for I do not pose myself as any Moses to lead the people out of the wilderness. Yet I am one of the people, and if I have a conviction I am so constituted that I am apt to state it.

Democracy is generally too diffusive, and has often had too much platform and tried too hard to please everybody. (We realize that it is easier to say too much than too little. Washington spoke little, but did much. Jefferson spoke severely at all, but he did much also. Neither Madison nor Monroe was a great speaker, but they shaped systems and events. What we need, as I think, is a common-sense, plain, straightforward Democratic platform, which will stop when it gets through. If the Democratic convention of 1908 goes Democratic it is not unlikely that the country may also go Democratic. If the convention dissipates itself in perisage, the voters will be likely to act accordingly, and go in all directions.

Now as to your question, "What should be the purpose upon which the Democratic campaign should be based?"

I venture to answer: The purpose of getting together the voters of the United States to assert the plain and simple Democratic creed that this is a government of the people; that the highest and plainest duty of government is to secure to the people equal rights, and to oppose all monopolies and special privileges.

The tariff, transportation, the trusts, and centralization are the subjects of public interest and consideration. We need no new issues and no new Constitution of strained generalization. Those who seek to invent new issues and new versions of the Constitution perplex and divert the minds of the people from substantial issues and just views that exist. It is principles and not "isms" that Democrats stand for; and if you take the compass of sound principle it will guide you through the tangles of contention.

Real issues are made by the people themselves, and grow out of their necessities.

Artificial issues are like artificial flowers, good for nothing except in the greenhouse.

As to the tariff, whom it for the purpose of making it in the interest of the people instead of the interest of monopoly, and the interest of domestic development instead of foreign development as it now is in many cases. When the farmers, the carpenters, the laborers, and the builders' tools can be brought in South America and South Africa at cheaper rates than here at the very doors of the American factory in which they are made, it is folly to claim that our farmers, carpenters, laborers and builders, and our people generally are "protected" thereby. They are simply misled. It is an insult to the intellect of men to claim that our myriad consumers are "protected" by charging them more for American manufactures than is charged for the same American-made articles in South America or South Africa—after paying freight to get them there. Only what you would, in the vernacular, call "a sucker" could be gulled by such sophistical contention. Be discriminatory and moderate with respect to the tariff. Correct its errors, lop off its excesses, eliminate its obvious and un-American discrimination. Respect our healthy and honest industries, having tender care for the wages of our workmen, and avoiding the wretched results of radicalism.

It is a fact of more than a century's history that the United States has never had a tariff measure adopted without some protection in it; and that no man was ever elected President who did not in some particular favor an item or schedule of protection. Look these facts in the face and do not expect to run amuck against everything that is not in harmony with doctrinaire ideals. Conditions are greater than theories. No great reform can be made in a day, and wise statesmanship must deal with the whole subject of tariff, transportation, and trust, sedately and prudently.

The conserving spirit should never give way before the hot and destructive spirit which wants everything "now," and refuses to follow Nature in her patient processes. Napoleon was great, but he fell from impatience.

"How poor are they who have not patience!
What wound did ever heal but by degrees!"

As to transportation, it is conducted, for the most part, and especially between the States, under public franchises. Regulate it as a part of interstate commerce, with the purpose of protecting the weak against the strong, and see to it that fair, just, and reasonable rates and rules prevail.

As to the trusts, the purpose should be to insist that they obey the law, and to protect the people from the restraints on the freedom and fairness of trade which they assail. The common law against them and the statute law should be alike enforced.

Centralization should be combated by the fair, just, and

The unpretentious House in Federal Street, Lynchburg, used as a temporary Residence by Senator Daniel

Senator Daniel's Home at Westerly, Two Miles outside of the City of Lynchburg

national construction of both State and Federal governments; and none of them should be twisted and perverted to embrace things not in their purview as the Constitution stands.

Ownership by the Federal government should be confined to those things which are necessary for self-defense. The United States owns and operates cannon and gun factories, and shipyards, because they are necessary for self-defense. They are now building a powder factory and should build whatever is needed to keep ready for war without being attacked by monopolies, when attacked without by hostile armies and fleets.

"Millions for defense, but not one cent for tribute."

Should we undertake to buy and operate the railroad systems of the United States, we would instantly convert the government itself into a prodigious railroad trust. It would have over a million employees—all to be appointed in some way at Washington, and there would be the most tremendous organ of centralization and corruption that the world has ever known.

Jefferson thought that the best government is that which governs least; while such a railroad government would be one that governs most.

Whenever the Federal government or the State governments have gone into partnership with the railroads they have come out at the little end of the horn. Look at the history of the Pacific roads, and look here in Virginia at our own experiment. Here are still hanging the burdens of our railroad experiments, and they have encouraged us to the idea of jumping from the frying-pan into the fire.

The extreme question of State rights that came to the issue of battle has been long since settled, but as long as the United States is a federation of States, questions of Federal and State jurisdiction will continue to arise and will pass to the peaceful jurisdiction of the courts. Democracy has its fixed principle on the subject, and no one has better stated it than did Jefferson, in his first inaugural address, when he stated for:

"The support of the State governments in all their rights as the most competent administrations for our domestic concerns, and sound bulwarks against our antirepublican tendencies.

"The preservation of the general government in its whole consti-

tutional vigor, as the sheet anchor of our peace at home and safety abroad."

This is hasty and offhand, and I speak with the more freedom because I am not a candidate for any place on the Presidential ticket, and have no expectation of becoming one. My desire is simply to warn our democratic friends, especially those whom I in part represent, against departing from the landmarks of Democracy. They have preserved the party for over a century, and it is by them alone that it can renew its youth.

FROM THE SPEECHES OF SENATOR DANIEL

In all his public addresses we less than in private life Senator Daniel has advocated the wiping out of sectionalism, emphasized the unity of our nation. Witness the following from his eulogy on the unveiling of the statue of President McKinley at Columbus, Ohio:

"This gave him to the republic. He gloried in its deeds of peace, friendship, and charity. The republic gave him to humanity. The world is wiser, happier, and better that he lived."

"McKinley's place is that of the great pacificator. McKinley was neither Englishman, Irishman, Scotchman; neither Puritan nor Cavalier. Huguenot nor German. He was an American of Americans, with the fresh ways and the fresh strength of the new composite nation that stands in the foremost file of time. Not one of the Presidents of the United States ever touched his heart or tendered cheer in the hearts of his countrymen than did he, and no one more thoroughly appreciated the good-will that was given him. He brought all his countrymen to better understanding and closer communion. He sent forth the warriors of the blue and the warriors of the gray to battle, close to elbow, heart to heart, rank to rank, in honor preferring one another. He trusted all alike; will be might. Time and again I heard him say that his highest ambition was to make all the people feel that they were Americans. This he did, and the people's sympathy was more than how pleasant a thing to behold brethren dwelling together in unity."

The doctrine of unity of the States was no less eloquently set forth by Senator Daniel in his eulogy at the memorial to the late Senator Hoar at Worcester, in 1903:

"You have indulged somewhat in personalities, and I am sure you will grant me that privilege. You spoke of the civil strife in which your State and mine took different sides. I was a boy of eighteen in 1861, when the war began, and I want to say here and now that I have but little respect for a boy who does not stick to his people and to his country without asking questions. With me it is 'My country, right or wrong,' and I transfer that sentiment to the United States without reservation. I am as loyal to the United States as any soldier who was ever a member of the Grand Army of the Republic."

There are in this world no better persons than brave soldiers. I have the greatest honor for the man who has been a soldier. I honor the man who fought against me in the civil war. I know what sort of a case he was up against, and I know what sort of a case we were up against. When I went to the United States Senate, my commanding was seconded by a man who fought with the Sixth Corps of the Union army. While I was fighting in the ranks of the Southern army I did my duty as I saw it. If I could stand before the judgment-day with as pure and honest a record on everything else as I do on that, I should get by easy."

"But why talk of the past? I am an American. I want the people of Massachusetts to know, I want the people of the world to know, that all the good soldiers were and soldiers of the Revolutionary war, nor are they all dead. There are those still living in the Old Dominion as loyal to the Stars and Stripes as ever followed a command. There are those who are as courageous as Lee and as eloquent as Henry. I am glad there has come a time when men may speak out and give fullest expression to their sentiments."

"No such similar area in the universe was ever before like America, the scene of such stupendous and such rapid evolution of achievement; no five centuries of the previous history of mankind was so signalized by the material achievements of intellect, of moral and physical heroism, or of material progression."

This mighty period of striving and contention has closed in the 'married realm of States.' The Congress unanimously, and the President cordially, have returned to the Southern States every one of their flags which were captured in the civil war, and in coming here at this time I have the double satisfaction of expressing the gratitude of my people for this high act of national grace and magnanimity toward them, and of declaring my conviction that the great and good men whose we mourn did much by his wise and generous course to produce the possibility of this feat of peace and friendship. And I may say of him and of my country in the same breath: 'They gentleness hath made this great.'"

"As we look forth upon our multitudinous nation from the eagle of vantage we have reached, we may realize that not one of the multitude feels that he is 'a man without a country.' There is none who does not realize that through our conflict we have reached greater respect and fresh friendship for each other; none who is ashamed of the past; none who fears the future; none who is not ready to give his life for his country. The unique distinction belongs to the American republic that, with over a century of national life behind it, including the stupendous civil struggle, not a single life has been upon the scaffold or under the red hand of execution for political opinion's sake. America alone of all the great nations of history can say this. There is the star of the first magnitude on the forehead of liberty enlightening the world."

VETERANS REVIEW VETERANS

ABOUT 15,000 U. S. VETERANS MARCHED IN THE MEMORIAL DAY PARADE IN NEW YORK CITY. THE LINE OF MARCH WAS FROM BRADWAT AND SEVENTH STREET TO GRANT'S TOMB. NEAR THE SOLDIERS' AND SAILORS' MONUMENT ON HICKSBOCK DRIVE THE PARADE WAS REVIEWED BY MAJOR-GENERAL OLIVER D. HOWARD, MAJOR-GENERAL DANIEL E. MCKEN, GENERAL FREDERICK D. GRANT, AND OTHER DISTINGUISHED PERSONS. AS THE HEAD OF THE PARADE REACHED THE REVIEWING STAND, THE VETERANS RECEIVED FROM THE BATTLESHIP "CONNECTICUT," WHICH WAS ANCHORED IN THE RIVER BELOW, THE NATIONAL SALUTE OF TWENTY-ONE GUNS.

HONORS FOR NEW YORK'S WORK-HORSES

THE FIRST PARADE AND REVIEW OF THE WORK-HORSES OF NEW YORK CITY EVER HELD TOOK PLACE ON MEMORIAL DAY. ABOUT 1000 HORSES AND 1000 VEHICLES WERE IN THE PARADE. PRIZES WERE OFFERED AND WON FOR THE BEST SHOWING IN THE CLASSES OF FOUR-HORSE AND THREE-HORSE TEAMS, BETWEEN, CUM-DE-DEEP, SIX, SEVEN, EIGHT, NINE, TEN AND NINE, CONCERN, LIGHT DELIVERY WAGONS, AND MISCELLANEOUS OTHERS, NOT TO SPEAK OF THE FROG AND FARMER WORKERS IN THE SERVICE OF THE FIRE AND POLICE DEPARTMENTS. THE ROUTE WAS FROM WASHINGTON SQUARE UP FIFTH AVENUE, PAST THE REVIEWING STAND AT MADISON SQUARE, WHERE THE PARADE WAS REVIEWED. EACH WINNER RECEIVED A BRASS MEDAL FIVE INCHES IN DIAMETER, WHICH WAS ATTACHED TO THE HARNESS. THE WINNING DRIVERS RECEIVED PRIZES IN MONEY RANGING FROM \$25 TO \$1.

WHEN WHEAT FAILS

HOW ELECTRICITY MAY BE UTILIZED TO PRODUCE THE NEW FERTILIZING AGENT, NITRATE, WHICH WILL INSURE THE CONTINUANCE OF AN ADEQUATE SUPPLY OF GRAIN

By PROFESSOR SILVANUS P. THOMPSON

D.Sc., F.R.S., B.A. Lond., M.D. Konigsberg

THE HUMAN race does not live by bread alone, it forms an essential feature in the diet of the white races that the possibility of a permanent shortage of wheat is a very serious question. With the growth of the wheat-eating nations, the demand for wheat has increased, while the increase of territory under culture for wheat has hardly kept pace.

Further, owing to the limitations of climate and soil the time must not be far distant when all the territory available for wheat-growing will be taken up. Even now much of the land devoted to wheat can be so utilized only by the stimulus of manures containing nitrogen, mainly compounds of ammonia and nitrates. But the nitrates which have been exported from India and Chili to an enormous extent for fertilizing the wheat-fields are also limited in quantity. What will happen to the world's food supply when the inevitable stage of exhaustion is reached? Must the white races starve for want of bread, or exchange their hereditary diet for the rice of the Hindu or the manioc of the Kaffir? Is it a mere coincidence that the wheat-eating races have developed an energy of physique and an activity of brain that have made them masters over the non-wheat-eating races? That they will demand wheat in absolutely certain. It is equally certain that within a comparatively few years the demand will overtake the supply. What then? Why, then, the resources of science and of human invention must be our resort. In the face of the famous dictum of our great chemist, Sir William Crookes, attention may be directed through the laboratory.

Now this pregnant sentence is an intimation that, failing the supply of natural nitrates, the chemist must find a way to supply nitrates artificially. This problem, the immense importance of which to the progress and continuance of civilization can hardly be overestimated, has lately assumed a new shape by the invention of new processes for the manufacture of nitrates by the aid of electricity. For the atmosphere of our globe consists of nitrogen and oxygen, mixed together, but chemically uncombined. These gases are the constituents, along with water, of nitric acid, and therefore of all nitrates. The difficulty is to force them into chemical combination. For a hundred years it has been known that any mere electric spark will cause a minute amount of the nitrogen of the air to enter into chemical combination with the oxygen. But the knowledge of how to effect this on a sufficient scale, and to generate nitrates commercially, is a recent achievement of science. The problem and its solution having been thus briefly stated, the aim of the present article is to demonstrate the reality of the impending crisis in the production of food-stuffs, and to describe the processes by which, with the aid of electric discharges, nitrates for the fertilization of the wheat fields may be manufactured from the inert nitrogen of the atmosphere.

It is only in countries within the temperate zones that wheat will grow; the tropics and the arctic regions are not available. It is therefore possible, in view of the climatic and geological conditions, to estimate the total available acreage in the world and this, including inaccessible regions such as Siberia, may be set down at not much more

than 240,000,000 acres. At the present average yield of 12½ bushels of wheat per acre, this would furnish an annual crop of 3,000,000,000 bushels; and as each wheat-eater consumes on the average 4½ bushels per annum (the which estimate 0.5 bushels needed for seed are included), the whole available area will suffice to furnish wheat for a total population of 660,000,000 souls. Now

at the present date of 1907 the total number of bread-eaters—practically all the white races and a certain proportion of men of other races in contact with the white races—may be estimated at 585,000,000, and it rises every year in an increasing ratio. According to the computations made in 1905 by Sir William Crookes, on whose investigations the question mainly

rests, the number of bread-eaters rose from 371 millions in 1871 to 472 millions in 1891. In 1911 it will be 663,700,000; in 1921 it will be 671 millions; in 1931, 746 millions; in 1941, 818 millions; in 1951, 893 millions. But the increase in the acreage under cultivation does not keep pace with the increase of population. The total area under cultivation for wheat averaged 34,750,000 acres in the years 1871 to 1873, and 62,300,000 in the years 1901 to 1905. Thus while the wheat-eating population increased 58.8 per cent. in twenty years, the average acreage devoted to wheat-growing increased by only 23.7 per cent. Since 1900 the rate of increase of bread-eaters has been more than double that of the acreage under cultivation for wheat. Unless something can be done to alter the conditions, it is obvious that a shortage of wheat is actually imminent. For if the entire available territory is only sufficient to raise wheat for 606 million persons (which number will be attained by the natural increase in the wheat-eating populations about the end of the year 1910), then either the consumption per head must be lessened, or else some means must be found to increase the average yield per acre above its present figure, namely 12½ bushels per acre. Furthermore, it must be remembered that when once any territory has become cultivated up to near its possible capacity for wheat, the acreage actually so used tends inevitably to decrease; for as the towns grow up, the land once brought into cultivation is needed for other crops, and a shrinkage of the wheat-growing area ensues. Thus is the province of Ontario, as a result of the prosperity of its towns, the acreage under wheat cultivation decreased by fifty-four per cent. between the years 1850 and 1885. Land brought quite recently into wheat-growing in Dakota, Queensland, New Zealand, Argentina, and even Mauritius, is already in some parts being now devoted to other uses. India, which is one of the wheat-growing countries, sends all her own crop for her famine-stricken people; while the United States, which for twenty years has been the world's greatest exporter of wheat, will shortly attain the serious stage of becoming a wheat importer to supply her own rapidly increasing white population.

As the white races are not likely to submit to a serious change of diet, or substitute bratis, rice, plantains, bananas, or maize for the wheaten bread that is their staple food, the only alternative is to augment the average output per acre. In different regions, owing to

"Unless something can be done to alter the conditions . . . a shortage of wheat is actually imminent. For if the entire available territory is only sufficient to raise wheat for 606 million persons (which number will be attained by the natural increase in the wheat-eating populations about the end of the year 1910), then either the consumption per head must be lessened, or else some means must be found to increase the average yield per acre."—PROFESSOR THOMPSON

The First Factory to produce Nitrate by Electricity—situated at Notodden, Norway

difference of soil, climate, and methods of cultivation, the yield of wheat per acre differs somewhat widely. In the United States the average yield is about 12 bushels per acre, and in Argentina, about 13; each, therefore, near to the average of all lands, namely, 12½, as already mentioned. In India, Florida, South Australia, and Algeria, the average yield is only about 9 bushels per acre. In Canada the average is 15½. In Continental Europe the yield rises from 16 in Austria and Sax, in Hungary to 23 in Germany and 25 in Norway. In the fertile plains and valleys of New Zealand it rises to 25½. In the wheat fields of Great Britain and Ireland it reaches 25, while in the little splendidly tilled kingdom of Denmark it actually attains 41.8 bushels per acre. If English farmers can succeed in raising 2½ times as much, or Danish farmers more than 3½ times as much, wheat per acre as the farmers of the United States, it might naturally be hoped and expected that by proper cultivation the average yield the world over could be raised from 12½ bushels per acre to at least 20 if not 25 bushels per acre. Certainly the use of appropriate fertilizers counts for a great deal. Different crops need different material agents: some need phosphates, some nitrogen, some potash. Wheat requires nitrogen, either in the form of nitrates or nitric acid, or else as ammonia. These materials exist as natural constituents of natural manures or products from them. Nitrate of potash as collected in India from manure soils is far too scarce to furnish a breadstaple part of the need. The guano beds from the islands of the south are nearly exhausted. The sulphate of ammonia made in our gas-works artificially is a powerful agent; but it cannot meet one-twentieth part of the demand. But the great staple fertilizer of to-day, without which even the present extension of the world's wheat-fields would have been impossible, is Chilean saltpetre—the nitrate of soda. Beds of this substance, the deposit of ages, occur as a crude native product in a narrow tract between the Andes and the shore hills of Chile. Of this material, extracted from the rough earthy substance, more than a million tons are exported every year all over the world. About 20 per cent. of this output is used in the manufacture of nitric acid in order to afford the ingredients used in smokeless gunpowder and other explosives, celluloid, xylonite, artificial dyes and azoic, and other chemical products. Another five or six per cent. goes for fertilizing the best crops for the sugar industry. The remainder, nearly 75 per cent. of the whole, is devoted to manuring the wheat-fields.

Sir William Crookes gives the following striking instance of the value of

nitrate of soda as a manurial agent:

"The action of nitrate of soda in improving the yield of wheat has been studied practically by Sir John Lawes and Sir Henry Gilbert on their experimental field at Rothamsted. This field was sown with wheat for thirteen consecutive years without manure, and yielded an average of 11.9 bushels to the acre. For the next thirteen years it was sown with wheat and dressed with five hundredweight of nitrate of soda per acre; other mineral constituents also being present. The average yield for these years was 26.4 bushels per acre—an increase of 24.5 bushels. In other words, 25.86 pounds of nitrate of soda produce an increase of one bushel of wheat."

Let us pause to consider the effect of these statistics. Assuming that the average yield all the world over could be raised from 12½ to 20 bushels per acre by a corresponding use of nitrates, the additional 7½ bushels will require 160 pounds of nitrate

of soda for each acre. If the present average be taken at 17.5, 100,000,000, then, even without any increase of territory, the quantity of nitrate needed would amount up to no less a figure than 12,000,000 tons per annum!

Now the reserve of Chilean nitrate, vast as it is, cannot possibly meet this gigantic demand. The output of these mines has grown from about 25,000 tons per annum in 1855, to over 1½ million tons in 1906; and at the present rate the mines will be exhausted in a period estimated by various authorities at from sixteen to forty-eight years from the present time. Clearly, though the wheat-famine may be staved off for a time by drawing on the saltpetre beds of Chile, it is but for a time. And then the world must find some other source of nitrogen for fertilizers, or starve.

Now nitrogen exists in vast quantities in the atmosphere, four-fifths of the air consisting of it. The total quantity of it in the atmosphere of the globe is about four trillions of tons (4 x 10¹² tons). But this nitrogen, being in the "free" or uncombined state, is inert. It is absolutely worthless as a fertilizer. Owing to its feeble chemical affinities it is with difficulty made to combine either with oxygen to form nitric acid or with hydrogen to form ammonia. "Fixed" nitrogen in either of these forms is a very valuable commodity; but the trouble is to fix the free gas. While carbon and sulphur and hydrogen readily "burn"—that is, enter into combination with oxygen, giving out heat in the process,—

The Granita "Absorption Towers" in the Nitrate Factory at Notodden, where the Last Stage in the Production of Nitrate is Accomplished

Three Electric Furnaces (800 Horse-power each) at Work manufacturing the immensely valuable Nitrate of Lime

nitrogen refuses to burn with oxygen. It is perhaps as well for us that it should be so, or else the very first flame struck by the first primitive savage would have set the entire atmosphere ablaze, and the world would have been bathed in an atmosphere of ourselves and poisonous nitrous fumes! Yet since nitrates and nitrites exist, it is clear that nitrogen can be made to enter into combination with oxygen. It is now more than 150 years since the famous L'Arrenish discovered that the electric spark passing through air can "fix" a certain small fraction of nitrogen as nitric oxide. Fifteen years ago Sir William Crookes exhibited an experiment on the flame of burning nitrogen, the combustion being maintained by supplying the flame with electric energy by an alternating current of electricity supplied at a high voltage. In fact, while in ordinary combustion, as, for instance, of carbon with oxygen, heat is given out, in this forced combustion of nitrogen heat is absorbed, and the combination can only go on while energy is being pumped in electrically. Noting this, Sir William Crookes with characteristic prevision pointed out in 1898 that this experiment suggested a possible solution for the food-problem; and he reminded his audience that though electric energy generated by steam-engines or gas-engines might be too costly, water-power, as at Niagara, furnished a cheaper source. He estimated that if electric energy could be obtained at as low a price as one-seventh of a penny per unit (i. e., per kilowatt-hour), nitrate of soda might be manufactured at the price of 15 per ton. Chile saltpetre being then 27 lbs per ton. It has since advanced to £11 per ton. He added that while it was possible as a scientific matter to fix a certain amount of atmospheric nitrogen by several methods, no process had yet been used except on a small scale, and none had at that date—some years ago—been brought to the notice of scientific or commercial men which could be considered successful as regards either cost or yield of product.

But in nine years much may be achieved. Chemist, electrician, and engineer, working in collaboration, with modern appliances and with an adequate natural supply of water-power, may accomplish much—have accomplished much, indeed, though the achievement is still in its infancy. For while various skilled inventors have been at work in various parts of the world, and various processes have been announced as more or less successful for fixing atmospheric nitrogen, three are actually at work on a commercial scale. In Scotland, a company is manufacturing cyanide of soda for treating auriferous quartz in the gold-mining industry. In Berlin, Professor Frank is absorbing nitrogen by means of carbide of calcium (itself a product of the electric furnace) to form cyanamide. In Norway a fully-equipped factory has been at work for two whole years, turning out Norwegian saltpetre, the nitrate of lime, by the direct process of burning nitrogen in a special electric furnace, absorbing the nitrous fumes in water as nitric acid, and combining the acid with lime to furnish a marketable product.

Since in this process nitrates are directly produced from the atmosphere, and the manufacture is on a commercial scale, some detailed account of this, the first factory for the electric production of nitrates, will have more than a merely technical interest.

The process is due in the genius of Professor Kristian Birkeland of Christiania, aided by the mechanical skill and organizing capacity of Samuel Ryde, an engineer of the same city. Birkeland, who has for many years made a study of the aurora borealis, has from time to time devised experiments to elucidate auroral phenomena, in the course of which he investigated the action of the magnetic field upon electric discharges of various kinds. Amongst other things he discovered the separation or dispersion of the Kathode beam, in a highly exhausted vacuum tube, under the influence of a magnet, into a sort of spectrum. After ten years of such work he was led to examine the singular action of a transverse magnetic field upon an electric arc formed when an alternating electric current is passing between the tips of two conducting rods or electrodes. Under these conditions the arc or flame instead of forming a short luminous jet about one-quarter inch long, as we have it in ordinary arc lamps, spreads out laterally into a series of cylindrical streams which enlarge themselves into a roaring disc of flame. Such a flame, as electric arc is blown out magnetically into a disc, Birkeland enclosed in an iron furnace lined with fire-brick, with suitable apertures through which a stream of air could be passed. The air which emerges after passing through this electric flame is rich in orange-colored nitrous fumes. After being cooled it is sent into a series of absorption chambers, built of granite, inside which water trickles down, absorbing the fumes and making a very pure nitric acid of interesting strength as it passes from tower to tower. This acid is absorbed by treating it with limestone and caustic lime, thus producing nitrate of lime, which is concentrated and packed in casks.

After erecting at first a small experimental plant of 25-horse power, and then a large one of 100-horse power, an experimental station of 600-horse power was set up near Arendal in the south of Norway. Then a site was chosen for the erection of a factory at Notsdalen in the Hiltredalen, where a neighboring waterfall, the Tinnos, furnished some 2400-horse power, while the lake beside which the factory stands affords water-carriage to Christiania or to Helsingør. The factory was conceived on a scale capable of turning out from 3000 to 5000 tons per annum. Before it had been at work six months plans were called for to enlarge it to increase the output fivefold. For the necessary power another waterfall, the Svælefos, higher up on the same stream, was secured, and the barrage was begun a few months later. In the gorge of the stream a new powerhouse was erected capable of affording 25,000-horse power.

But other projects for further developments are on the way. The Norwegian Nitrate Company has acquired powers for another waterfall at Hellefos near Arendal, with about 25,000-horse power, another of 40,000-horse power at Wamma on the Swedish border, and for a still more important installation at the Bjånesfos in the heart of Norway. This fall, the work of harnessing which has already been begun, will yield a steady minimum output of 22,000-horse power. Some years must necessarily elapse before the whole of this can be utilized. These Norwegian falls do not

THE AUTOMATIC BENEFIT

By ARTHUR SOMERS ROCHE

DRAWINGS BY F. STROTHMANN

ITZOK BLUM was dead. He was a good husband, kind, gentle, and industrious, so his widow mourned him truly, felt that life without him was hardly worth the living. She gave him a funeral whose elegance satisfied the most censorious critics in the neighborhood.

And having discharged her full duty to the departed Itzok, Sadie Blum returned to her home of three rooms in an Broadway Street tenement, and began to lay plans as to how she should fare the world alone. Battered! Of course. There was room enough for three or four. And in the old days, before Itzok came into her scheme of things—Ah! he was such a handsome man, with fine eyes, and five hundred dollars in the bank!—why, in the old days Sadie was one of the best knee-pants makers east of the Bowery. So it would be an easy matter to get a sewing-machine, earn wages, and forget, or at least lessen, her grief while driving the needle at high speed. The future, then, would take care of itself. But the present—had Sadie forgotten anything she ought to do? True, Itzok's original five hundred was still in the bank, together with a few more they both had added to the hoard; but even then that was no reason why Sadie should not gather a little more. What says Toplitzky? He who seizes a chance to get good money is throwing away good money. And Sadie knew of a certain and easy way to make a big profit in one evening. She would give herself a benefit—a regular benefit in a regular theatre.

A regular benefit? Sure, certainly—why not? Itzok was a good man and popular. He was a pioneer of loaves. He had friends by the score, good friends who would help the poor widow by buying tickets for a benefit. There is on the East Side a certain inagle in the "very word "Benefit." For the

Jew is generous to his own, yet, at the same time, pockets are more easily opened when there is a tangible return thereto. And how better can one combine charity with pleasure than by attending a performance at the theatre with the knowledge that one is doing a good deed?

Worcester defines the word benefit as meaning a favor, or a profit conferred. But Worcester never attended a Yiddish automatic benefit, else he might have characterized it as sometimes a profit deferred.

In the beginning there is the ever-present question of finance. The theatre cannot be hired for less than three hundred dollars,

save on some rare occasion, when a benevolent management reduces the price to two hundred and seventy-five. And when one realizes that so wide-spread is the benefit fever that three nights a week are given over to that use, one can understand that reductions are rare.

Sadie Blum called a council of her friends. They were unanimous for the scheme, and contributed by five and by ten dollars at a time, until the three hundred was raised.

Then a delegation, noisy, hydra-headed, full of eloquent hands, approached the manager. But presently Mrs. Blum was recognized as the leader, and she voiced the request.

After bargaining and threats to go across the street to the rival playhouse, a deal was finally arranged. The price was three hundred dollars, said price to include the privilege of choosing the play to be performed. Then came the tug of war. Mrs. Blum, after vehement debate, finally insisted upon the courtesy due her sex, and a tragedy was chosen, despite the protests of those who preferred opera.

The tickets for Thursday night are turned over. The friends prove that

MONTGOMERY FLAGG

their kindness extends farther than the mere lending of money, by taking a number of the tickets, and waylaying other friends. It is a benefit, they explain, for Mrs. Blum. The performance! Ah, that shall be left to the kind friends who buy the ticket for the poor sick lady. Should an opera please him, or should he prefer a drama? It is hard to please all, so why not let each purchaser feel the glow of pride which comes with the knowledge that one is choosing one's own play?

And so the amateur ticket-sellers dispose of what part of their allotment they can, and turn over the remainder to Mrs. Blum, who, on the night of the benefit, mounts guard in the box-office. She shares her temporary dignity with those of her friends whom she deems worthy of the honor, until, at last, the little box is jammed so tightly that, in the excitement of greeting old friends who have neglected to buy in advance, she mixes up all the tickets.

And so it happens that the youngster demanding a twenty-five-cent seat receives a chair in the orchestra, and a heartfelt belief in the beauty of charity is instilled in his mind. But the crowd is becoming too great, so Mrs. Blum delegates her nephew to sell tickets on the sidewalk. He is doing a land-office business, when a minion of the law, seeing him roughly by the collar, demands his speculator's license.

Expostulations avail nothing. What matters it that the house is sold to his aunt? Comes the insistent demand from the Hebrew special officer, "Where is your license?" It is written that man cannot do two things at once, and pacifying the law is detrimental to the proper carrying on of business. It is not to be wondered at that the vendor farther mixes up the vendors, thereby adding to the joy of the occasion. And he retires to the box-office, with a train of frail Russians clamoring for his hand.

Inside, the ushers are having their hands full. A full-bearded patriarch has tickets for wife, children, and grandchildren. A bawdier group, they crowd around the usher, and he shrinks from their peremptory demands for seats. Down the centre aisle they start. Their coupons are for C, but what matters a little thing like the alphabet to one who reads only Yiddish? The usher states the case. They must retire two rows.

"Are these tickets?" thunders the old fellow.

Reluctantly the usher admits that it is even so.

"But me no lute!"—or its Yiddish equivalent—cries the patriarch, whereupon he hands his book into the first row. Persuasion having failed, the usher calls for the officer, and, with firm mutterings about the disrespect for their elders among the Yiddish youth of to-day, that family is settled in its own row.

Meanwhile the troubles have augmented. While the usher has been dallying with old Michaelowitz, other benefactors have been preempting seats, for all the world like a crowd at a ball game.

Then reigns a dapper youth, his hair sleekly parted in the middle, and accompanied by his sweetheart, both laden with bags of fruit and candy, presents his tickets. Alas! his seats are occupied by a Kleinschiff Russian who has died the preservation of his native land for the glorious free soil of America. He give up

Balancing a hired No. 6 silk hat upon a No. 7 head

his seat? Has not the heritage of two thousand years of tyranny taught him the value of to have and to hold? It would seem so. Before he yields, he would fain see what he is to receive in return. Better seats? Bring them forth that he may behold. But the majesty of the law is again invoked, and another convert has been won to anarchy. For tyranny prevails here as well as in Russia.

A middle-aged man, with his spouse, lumbers down the aisle. The usher hastily glances at one ticket, shows them seats, and then discovers that their coupons are for widely separated parts of the house. But this time there is real trouble. If the amateur ticket-sellers have made mistakes, that surely is not the fault of the audience. Have they not given up their hard-earned money, and shall they be deprived of what is coming to them? And the wife's righteous indignation is roused so loudly that the usher is driven to retreat, trusting that no claimant will come for those particular chairs. Fortunately, when they do, they prove to be a simple couple, too engrossed in anticipation of the delights to come to care where they sit.

And so, with incipient riots every minute, the house is filled. At eight o'clock not a seat is vacant, save in the boxes. Every one knows that the performance does not start until a quarter after, but the Broadway habit of disturbing your neighbors has not yet been adapted on the East Side. Once seated, the proper thing is to arise and look for acquaintances. A tall brunette unduly stands, waves her hand toward the balcony, and cries: "Ooh-hoo, Emma! Hello! Ais'd id fine!" And by the satisfied expression on her face it seems that Emma agrees, although by this time noisy greetings prevent the accurate recording of any one conversation.

And now the boxes are filling. The votaries of fashion must prove their status to a lower world, hence they arrive a little late, even as Fifth Avenue makes its entrance at the opera. Only, in the Yiddish theatre, a late arrival does not mean after the curtain has risen. All gaze at them, and they hurry around the

(Continued on page 887.)

"Hats off!" the curtain rises, and the play is now the thing

"HOME RULE" AGAIN

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

MR. BIRRELL'S bill is a step in the right direction, but a very modest one. The council which it erects to deal with exclusively Irish affairs is in no sense a legislature. It does not contain a trace or touch, as Mr. Birrell said in introducing his measure, a hint or a suggestion, of any new legislative power or authority. No law, public or private, can ever be made at any time or in any circumstances by virtue of any one of its provisions. It does not authorize the levying of a single tax or the striking of the lumlost rate. It leaves the constitution of the United Kingdom unaperturbedly unaffected. To those whose memories go back to the home-rule bills of 1886 and 1893 Mr. Birrell's proposals can only seem barren and jejune, can only be regarded as a proof that the Irish cause in the last twenty years has retrograded and not advanced. There is, however, one point in which it is identical with the more heroic measures of the Gladstonian epoch. It is pre-destined, as they were, to unhesitating rejection by the House of Lords.

All the world knows that Ireland is administered by a series of boards, most of which make their headquarters in Dublin Castle. There are some forty-five of these boards. Some of them are under the control of the Chief Secretary for Ireland, others of the Lord Lieutenant for Ireland, others again are independent of both and lead their own lives in their own way. The English House of Commons, already overburdened with business, has neither the time nor the knowledge to supervise their workings. The boards form together a peculiarly vicious and demoralizing sort of bureaucracy. Their shortcoming is not corruption; it is not previous inefficiency; it is not indifference to the welfare of Ireland; it is that they lack, and can never hope to gain, the confidence of the people, and that they are hampered in all they do or attempt to do by an insuperable suspicion. Mr. Birrell described the Dublin Castle system with his usual picturesque lucidity. "It is," he said, "situated off from the great current of national life and feeling; and one cannot feel—I do not believe anybody within the walls of Dublin Castle can feel—that that is the way to secure the regeneration of Ireland. No pulse of real life runs through the place. The main current of Irish life as it rushes past its walls passes by almost unheeded. There it stands, remote, unfrequented, miserably slow," regarding this great stream of national life and feeling with a curious expression, mingled, it may be, with cynicism and amusement, coupled also, I admit, with a passionate tutorial desire to teach the wild Irish people how to behave themselves, just as the great Roman procurator of Anne Bonnet's day, being in his delightful villa in York, or Calchester, or Bath, may have regarded the vagaries of the inhabitants of this island."

That is a perfectly good description. Dublin Castle is an amazing medley of overcrowded, overlapping boards, a standing blot on England's claim to know something of the elements of good administration. It has scarcely a single defender anywhere in Ireland. Unionists have conquered and denounced it to less heartily than Nationalists. A Russian bureaucracy in Finland could not be more utterly divorced from the sympathies and confidence of the people it rules. I scarcely know, indeed, what merit it possesses or what fault it lacks. Ireland at present has no-fourth the

number of indictable offences to her discredit as Scotland. Yet she is compelled to maintain a police force twice as large, and is charged \$5,000,000 a year more for its upkeep. The supreme need of Ireland is education, yet she pays more for her police than for her schools and colleges. Ireland has a smaller population than Scotland and yet pays \$1,000,000 a year more for her judicial system, and \$2,000,000 a year more for her local government—and it is like going to Spain to see the way in which law is sometimes administered in Ireland, and to watch the sublime struggle between Irish prejudice and Irish jury-packing. Such things are the inevitable result of committing the government of the country into the hands of alien and mostly irresponsible bureaucrats. If common sense and coordination were introduced into Dublin Castle, the greatest authority on the subject has estimated that a saving of nearly \$2,500,000 a year might be effected. But to give Ireland merely her money's worth is not enough. Until the majority of the people feel that they do in some sort control their own destinies and have in a measure a shaping hand in their own government, until they are made conscious of a harmony between Irish sentiment, instincts, and responsibility, and the daily work of Irish administration, the country will never be contented. That seems to me the plainest of the innumerable lessons to be learned from Irish history. It is a lesson which Mr. Birrell has thoroughly measured. The supreme aim of his bill, in his own words, "is the association of the sentiment of the Irish people as a whole with the administration of the numerous statutes, rules, and regulations which direct the conduct of purely Irish affairs within Ireland herself."

He proposes to attain this object by creating a council of 100 members, eighty-two of whom are to be elected and twenty-four nominated. The council is to hold office during three years. It is to take over the administration of eight of the principal departments of the government. The resolutions it passes are to be obeyed by these departments, except when the Lord Lieutenant either reserves a resolution or amends it or sends it to the council for further consideration. The council is to work through committees. A new education department, amalgamating various boards that now profess to deal with educational matters, is to be created and will also be under the control of the council. A separate Irish treasury is to be established, and there is to be paid into it a sum of \$3,250,000 for five years over and above the present cost of the departments that the council will administer. Such is rough outline is the government's scheme. Obviously it falls very far short of home-rule. Criticism of it on other and purely administrative grounds is also easy. The position of the Lord Lieutenant, for instance, seems under the provisions of the bill to be an impossible one. Nor does the measure do anything to relieve the congestion of Parliament or to place Irish bills in the hands of the Irish members. On the other hand, it does establish a certain correspondence between Irish sentiment and Irish government, and it has also the negative virtue of doing nothing to harm the Nationalist cause.

Another attempt to solve the Irish problem and another failure—such, I fear, will be the verdict that history will find itself compelled to pass on Mr. Birrell's bill.

MAM' LINDA*

A Novel
BY WILL N. HARBEN

ILLUSTRATED BY F. B. MASTERS

CHAPTER XVI

At the next day came and went on toward its close, the whole town took on an air of vague depression. Men who now lived at Darby, but had been former residents of the mountainous country and were supposed to know the temper and character of the aggrieved people, shook their heads and smiled grimly when the subject of Pete's coming trial was mentioned. "Huh!" said one of these men who kept a small grocery-store on the corner, "that nigger'll never see the door of the court-house."

And that opinion grew, and seemed to saturate the very garment of approaching night. The negroes at work in various ways along the business portion of the town left their pots early, and with no comment to the whites or even to their own kind they betook themselves to their homes—or elsewhere.

Just after dark Carson went home to supper. As he drew near the front gate he noticed that the Warren house was lighted both in the upper and lower portions, and that a group of persons were standing on the veranda. He noticed the towering form of old Lewis and the bowed, bandanna-clothed head of Linda, and with them, evidently offering consolation, stood Heles, the Major, Saunders, and Keith Gordon.

Carson was entering the gate when Keith, through the twilight, recognized him and signalled him to wait. And leaving the others Keith came over to him.

"I must see you, Carson," he said, in a voice that had never sounded so grave. "Can we go in? If Mam' Linda sees you she'll be here in a minute. She's terribly upset."

"Come into the library," Carson said. "I see it's lighted. We'll not be disturbed there."

Inside the big square room with its simple furnishings and drab tints Carson sat, weary from his nervous strain and loss of sleep, into an easy-chair, and motioned his friend to take another; but Keith, twirling his hat in his hands nervously, continued to stand.

"It's awful, old man, simply awful!" he said. "I've been there since sundown trying to help pacify Mam' Linda and Lewis, but what was the use?"

"Then she's afraid?"

"Afraid? Good God, how could she help it! The negro preacher and his wife came to Linda and Lewis and tried to prepare them for the worst. Do you think Linda doesn't know the danger? Well, she does better than any living person. She's past the tear-shedding stage. She and old Lewis simply pace the floor like gaunted brutes with human hearts and souls bound up in them."

"Poor old woman!" Carson groaned. "If it had to come on her it would be better to have it over with. It would have been better if I had stood back last night and let them have their way."

"Oh no," protested Keith, "that's the old woman's sole comfort. She hardly draws a breath that doesn't utter your name. She still believes that her only hope rests in you."

He tore himself from his chair and began to stride about the room like a restless tiger in a cage. His walk took him into the hall utterly forgetful of the presence of his friend. There a colored maid came to him and said, "Your mother wants you!"

He stared at the girl blankly for a moment, then he seemed to pull himself together. "Has my mother heard?"

"No, sir, your father told me not to excite her."

"All right, I'll go up," Carson said. "Tell Mr. Gordon to be in the library to wait for me."

"I was wondering if you had come," the invalid said, as he bent over her bed, took her hand, and kissed her brow. "I presume you have been very busy all day over Pete's case."

"Yes, very busy, another day."

"And is it all right now?" Your father tells me the trial is set for to-morrow. Oh, Carson, I'm very proud of you. I heard your speech last night, and it lifted me to the very Throne of God. Oh, you are right, you are right, you are right! It is our duty to love and sympathize with the poor creatures. They are still children in the realms of their past slavery. They can't act for themselves. Their crimes are due chiefly to the lack of the guiding hand they ever had. Oh, my son, your father is angry with you for spilling your political chances by such a radical stand, but even if you lose the race by it I shall be all the prouder

* Begun in HARBEN'S WEEKLY, Vol. LI, No. 959

of you, for you won't sell yourself. I wish I could go to the court-house to-morrow, but the doctor won't let me. He says I mustn't have another shock like that when I heard that awful shot and saw you reel as if about to fall. Now, are you listening?"

"Why, yes, mother. I—" His mind was really elsewhere. He had dropped her hand and was standing with furrowed brow and tightly-drawn lips in the shadow thrown by the lamp on a table near by and the high points of the old-fashioned bedstead.

"I thought you seemed to be thinking of something else," said the invalid, plaintively.

"I really was troubled about leaving Keith down-stairs by himself," Carson said. "Perhaps I'd better run down now, mother."

"Oh yes, I didn't know he was there. Ask him to supper."

"All right, mother. And he left the room with a slow step, fading Gordon on the veranda below fitfully puffing at a cigar as he walked to and fro.

"Heles called me to the fence just now," Keith said. "She's all broken to pieces. She sent you a message."

"Me?"

"Yes. With the tears streaming down her cheeks, she simply said, 'Tell Carson that I am praying that he will think of some way to avenge this disaster.'"

"She said that?" Carson turned and looked through the gathering shadows towards the jail, then he asked in a tone that was harsh, crisp, and rasping:

"Keith, could you get together to-night fifteen men who would stick to me through point to point, and help me arrive at some decision as to—what is best?"

"Twenty, Carson—twenty who would risk their lives at a word from you."

"They might have to sacrifice."

"They wouldn't make a bit of difference; I know the ones you can depend on. You've got granite friends; the truest and bravest a man ever had."

"Then have as many as you can get to meet me at Blackburn's store at nine o'clock. We may accomplish nothing, but I want to talk to them. God knows, it is the only chance. No, I can't explain now. There is not a moment to lose. Tell Blackburn to keep the doors shut and let them assemble in the rear as secretly and quietly as possible."

"All right, Carson. I'll have the men there."

CHAPTER XVII

When Carson reached the front door of Blackburn's store, near nine o'clock, he found it closed. For a moment he stood under the crude wooden shed that roofed the sidewalk, and looked up and down the deserted street. It was a dark night, and from the aspect of the heavy, troubled clouds high winds seemed in abeyance beyond the hills to the west. He was wondering how he had been made his presence known to his friends within the store when he heard a soft whistle near by, and Keith Gordon beamed up, a flaring disk of a cigar lighting his expectant face.

"I've been waiting for you," he said, in a cautious undertone. "They are getting impatient. You see, they thought you'd be here earlier."

"I couldn't get away while my mother was awake," Carson said. "Dr. Stone was there, and warned me not to leave at night. She can't stand any more excitement. So I had to stay with her. I read to her till she fell asleep. What's here?"

"The gang, and fully fifteen other friendly fellows—you'll see them on the inside, every man of them with a gun. At the last moment I heard that Pole Ruber was at the wagon-yard, and I nabbed him."

"Good, I'm glad you did. Now, let's go in."

"Not yet, old man," Keith objected. "Blackburn gave special orders not to open the door if any person was in sight. Let's walk to the corner."

They went to the next street, and stood at the foot of the stairs leading up to the den. No one was in sight. Across the summer tracks of the nearly switch-yard there was a stream-flouring mill, which ground day and night, and the steady puffing of the engine beat monotonously on their ears. In a red flare of light they saw the shadowy form of the engineer striking the fire.

"Now, the way is clear," said Keith; "we can go in, but I want to prepare you for a big disappointment, old man."

Carson stared through the darkness, as arm in arm they moved back to the store. "You mean—"

"I mean that the meeting, as it is, is a big tribute to them—the esteem in which they all hold you. No other man could have got them together at such a time; but they are not going to allow you to leave now, they have already had time to talk it over in there, and they have agreed that to make any attempt to stop the lynchers by force would be sheer folly. Pole Baker brought some reliable news, reliable and terrible. I've been in for anything myself, but when he said—he will explain."

Giving a rap on the door that was recognized within, they were admitted by Blackburn, who stood back in the shadow and quickly closed the shutter and looked it behind them. In the uncertain light of a lamp with a smoky chimney, on the platform in the rear sat on boxes, chairs, table, and desk a motley gathering of men. Kirk Fitzpatrick, the heavy-eyed black-haired tinner, who had a jest for every moment, was there; Wilson, the shoe-maker; Pole Baker, the German laker; Tom Wayland, the good-hearted drug clerk, whose hair was as red as blood; Bob Smith, Wingo Tangle, and, seated close to the lamp, the crumpling form of Garner, reading a dime novel and utterly deaf and blind to sounds and things around him. Besides those mentioned there were eight or ten other ardent political supporters of Carson Dought.

"Well, here you are at last," Garner cried, throwing down his novel. "If I hadn't had something to read for have been asleep. I don't know any more than a rabbit what you are going to propose, but whatever it is we are late enough about it."

Harriedly, Carson explained the cause of his delay, and took the chair that the tinner, with the air of a confessed inferior, was passing towards him. As he sat down, and the lamplight fell athwart his careworn face, the group were struck dumb with sympathy and a strange, far-reaching respect they could hardly understand, certainly not have put into words; but it was in obedience to that inner attractive force of his that had bound them one and all to him, and which, they felt, nothing but dishonor could break. And yet to-night they sat around him, hands clutched together in such grim opposition that he felt it in the very droop of their attitudes—their silence.

"The truth is," Garner broke the awkward pause, "we guess you got us together to-night to offer open opposition—in case, of course, that the mob means to burn your client. That seems the only thing a body of men can do. But, my dear boy, there are two sides to this question. For reasons of your own, chief among which is a most beautiful principle to see the humblest stamp of man get justice—for these reasons you call on your friends to stand to you, and they will stand, I reckon, to the end; but it's for you, Carson, to act reasonably and think as readily in the interests of all of us as for the unfortunate prisoner. To meet that mob by opposition to-night would—well, ask Pole Baker the latest news. When you have heard what he knows to be true I am sure you will see the utter futility of any movement whatever."

All eyes were now turned on the gaunt mountaineer who was sitting on an inverted milk-pail, whistling a fine point on a bit of stick which now and then he thrust automatically between his great white teeth.

"Well, Carson," he began, in drawing tones, "I loved you—used want to know just how the land lays, and as I had a sort of underground way of gettin' at the facts, I did it an' come on to town. I had heard about how low your mother was, an' easy upset by excitement, an' so I didn't go up to your house; but I met Kirk, an' he told me I could see you at this meetin', and so I waited. Carson, the jig is certainly up with Peter Warren. No power under high heaven could save his neck. The report that went out this mornin' was sent out on purpose to throw the authorities off their guard. Only about thirty men are still on Sam Dudley's trail—the rest, hundreds and hundreds, in bunches an' fartions—each faction totin' a flag to show what they hail from an' all dressed in white sheets, for miles an' miles around, is headed this way."

"Do you mean right at this moment?" Carson asked, as he started to rise. Pole noticed to him to sit down.

"They won't be here till twelve o'clock," he said. "They've passed the word about amongst 'em, and agreed to meet, so that all factions can be on hand, at the old Sanderson place, two miles out on the Springtown road. They will start from there at half past eleven on the march for the jail. It will be after twelve before they get there. Peter's got that long to make his peace, but as longer. And right here, Carson, before I stop, I want to say that there ain't a man in this State I'd do a favor for quicker than I would for you; but many of us are family men, and while that nigger may be innocent, still his life is just one life, while—well," Baker snapped his dry fingers with a click that was as sharp as the cocking of a revolver—"I wouldn't risk it if we opposed them now. They are as mad as wounded wild-geese. They believe he done it—they know on reliable testimony that

he said he'd kill Johnson, an' they want his blood. Five hundred such as we are wouldn't help stop 'em a minute. I want to help, but I can't."

There was silence after his voice died away. Then Garner rapped on the table with his small hand, and tossed back his long hair from his massive brow.

"You may as well know it, Carson," he said, calmly. "We put it to a vote just before you came, and we all agreed that we would—well, try to bring you round to reason."

To their surprise, Carson took up the lamp and rose. "Wait a moment," he said, and with the lamp in hand he crossed the elevated part of the floor and went to the open cellar door. They were left in darkness for a moment, the rays of the lamp flashing now only on the closed doors in the front, for Dought had gone down into the cellar.

"Huh, there ain't any one there," Blackburn cautiously called out. "I looked through the full length of it, turned over every box and barrel before you came. I wasn't going to run any risk in a matter like this."

There was some fixed quality in Dought's drawn face as he emerged, carrying the lamp before him, ascended the steps, and again took his place at the table.

"You thought somebody might be hiding there?" the storekeeper said, "but I was careful too."

"No, it wasn't that," Carson said. "I was wondering—if I was trying to think—"

"There is only one thing to do, my friends"

He paused as if submerged in overpowering thought, and Garner turned upon him almost startly. He had never before used quite such a harsh tone to his partner.

"You've gone far enough, Carson," he said. "There are limits even to the deepest friendship. You can't ask your best friends to make their wives widows and their children orphans in a blind effort to save the neck of a stupid negro, even if he's as innocent as the angels in heaven. As for yourself, your heroism has almost led you into a cesspool of reckless absurdity. You have let that old man and woman up there and Miss—that old man and woman—any way—work on your sympathies till you have lost your usual judgment. I'm your friend and—"

"Stop!" Carson stood up, his hands on the edge of the table, the lamp beneath him throwing his middle face into the shadow of his eyes. "Stop," he repeated. "You say you have; give up. Boys, I can't. I tell you I can't. I simply can't let them kill that boy. Every nerve in my body, every pulsation of my soul screams out against it. I have set my heart in averting this horror."

"Ten years ago I could have gone to my bed and slept peacefully, as many Christian citizens of this town will to-night, under the knowledge that the verdict of mob law was to be executed, but in the handling of this case I've had a new birth. There is no God in heaven if I say if he has not made it possible for the mind and will of man to prevent this horror. There must be a way—there *is* a way. I could put my ideas on paper, my brain to-night—my faith and confidence into your souls—would prevent this calamity and set an example for our fellows to follow in future."

"Your ideas into our brains?" Garner laughed patronizingly. "Well, I like that, Carson, but if you can see a chance to save that boy's neck, and our own I'd like to have you plug it through my skull if you have to do it with a steel drill. At present I'm the senior member of the firm of Garner and Dought, but I'll take second place if you run show, when you are aiming at."

"I don't mean to put your intelligence, Delight went on passionately, his voice rising higher, "but I do see a way, and I am praying God at this moment to make you see it as I do, and be willing to help me carry it out."

"Blaze away," said Pole Baker, leaned up from his log. "I'm not a nigger-lover by a long shot, but I'm sensible, seeing how you feel about this particular one an' his connections, I'm an anxious to save 'em as if I owned 'em in the good old day, an' his sort was freshen two thousand apiece. You blew away. I feel sorter sorakin' anyway after you've got you while you was at that job, till you're sick enough to sleep. By gum, you give me the end of a log that I kin tote, an' I'll do it or break my back."

"I want it understood, Carson," said Wade Tingle, at this juncture, "that I was only voting against our trying to stop that mob by force, and the day I did just that I was voting in the interests of the family men here to-night. God knows if you can see any other possible way."

"We have no time to lose," Carson said. "If we are to accomplish anything we must be moving. Furthermore, what I may propose may, in a way, be made yet to make a sacrifice almost as great as that of open resistance. I am going to ask you law-abiding citizens to break the law, as you understand it, but not law as the best wisdom of man intended it to be. Our country is in a state of open lawlessness. The law I'm going to ask you to break is already broken. The highest court might hold that we would be no better, in fact, than the army of law-breakers headed this way with the form of race hatred on their lips, its insense blame in eyes that till recently burned only in gentleness and human love. But I'm going to ask you to choose between two evils—to let an everlasting injustice be done at the hand of a hate that will drown in tears of regret in time to come, or the lesser evil of breaking an already broken law. You are all good citizens, and I tremble and blush over my undarity in even thinking of asking you to do what you have never in any form done before."

Carson paused. Wondering silence fell on the group. Upon each face struggled evidences of a desire to grasp his meaning. That it was momentous so man there doubted. Even the ever-quick Garner was shaken from his habitual lax attitude, and with his delicate fingers rigidly supporting his great head he stared openmouthed up at the speaker.

"Well, what is it?" he presently asked. "There is only one chance I see," said Dought stood erect, his arms folded, and stopped as if that the light of the lamp fell full upon his tense features. The patch of sickle-bender stood out from his pale skin, giving his perspiring brow an uneasy look. "There is only one thing to do, my friends, and without your help I stand powerless. I want to form ourselves into a supposed mob of ignorant men, to go through of the others to the jail, and force Bart Barrett to turn the prisoner over to us."

"Great tiddy!" Garner rose and leaned on the table. "Then what would you do?"

"Carson pointed steadily to the cellar-door and swallowed the lump of excitement in his throat. "I would, as you see, bring him here and imprison him, in that cellar, guarded by us only till—till such a time as we could safely deliver him to a court of justice."

"By God, you are a whet-bone!" burst from Pole Baker's lips. "That's the easiest thing I ever heard of."

"You mean to make Bart Barrett believe we are—actually bent on lynching the negro?" demanded Keith Gordon, enthusiasm bubbling from his eyes and voice.

"Yes, that would be the only way," said Carson. "He is a wren of a fellow, his only position is his livelihood. Even if we could personally him to enter our plan it wouldn't be fair to him, for he would be shouldering more responsibility than we would. The only way is to thoroughly disguise ourselves and

compel him to give in, as he will be compelled by the others if we don't act first. I know he would not fire upon us."

"It looks to me like a steady lark," spoke up the storkkeeper. "As for me, I want to reward originality by doing the thing if possible. As for that cellar it's as strong as an ancient fortress, anyway, and Carson, Pole would not try to escape if you ordered him not to. As for disguises, I can lend you all the blacked sheeting you want. I got in a fresh bale of it yesterday. I could cut it into ten-yard pieces and that would not hurt the sale of it. Moments like this a better price than regular stock, anyway. Boys, let's vote on it. All in favor stand up."

There was a clatter of shoes and rattling of chairs, boxes, kegs, and other articles which had been used for seats. It was an immediate and unanimous tribute to the wren Carson, Dought's personality had long held over them. They were all to him to man; even Garner suddenly, and strongly for his abrupt individuality, relegating himself to the rank of a common private under the obvious leader.

"Hold on, boys!" exclaimed one not so easily relegated to any position out of full of action, and Pole Baker was leaning in a further proposal. "So far the arrangements are good and sound, but you-uns haven't looked far enough ahead. When we get to the jail that's got to be some damned fine act, or that Bart will snarl a mouse and release our demands. In a case like this silence is a sight more powerful than a fake noise when we see some'n a hangin' to save a man, and one man only, to do the talking."

"Yes, and you are that man," said Carson; "you must do it."

"All right. I'm willing," agreed Baker. "The trust is, folks say I'm good at just that sort of thing an' I'll sort of like the job."

"You mean to do it with the very man," said Carson.

"You bet he is," agreed Blackburn; "now come down in the store an' let me rig you up some. We haven't any too much time to lose."

That's another thing you-uns don't seem to have calculated on," said Baker, as Blackburn was leading them down to the dry-goods counter. "It may take time to quiet the public excitement even if we put this thing through to-night. You propose to let the indignation go out that that was a lynching. How will you keep 'em from thinkin' it's a fake noise when we see some'n a hangin' to a tree limb in the mornin'?" If they thought we'd put up a job on 'em, they would now around till they was on to the whole business, an' then that would be the devil to pay."

"You are right about that," said Garner. "If we could convince that Pole has been tricked by some party who don't want to be known in the matter the excitement would die down in a day or so, but if they should imagine that he had been liberated it would bring on a civil war."

Never mind, was Pole's ultimatum. "Leave it to me and I'll take care of something like that," said Barrett. By gum! he had about told 'em that, for reasons of our own, we intend to hide the body when the niggers can't get at it to give it decent burial! I'll believe that would go down."

"Splendid, splendid!" said Garner. "Work that fine enough. Pole, give us the word to give up or everything."

"Well, I can work it all right if I am to do the talkin'." Pole said, as he made a plunge for his portion of the sheeting.

CHAPTER XVIII

FIFTEEN minutes later a spectral group filed out through the rear door of the store, and passed for further orders in the shadow of the wall of the adjoining lank building. The sky was still kin to a safe place. That if he looks follow in the houses

With Carson and Pole in the lead the party marched grimly two and two, a weird sight even to themselves. Straight down the alley behind the stores along the railway they moved, keeping step like trained military men. Pole carried a roll of raw rope and swung it about in his white, wrinkle clutch as he continually gave orders as to turns and tentative pauses. Now and then he would leave them standing and stride ahead through the darkness and stand for them to come on up. In this way they progressed, with many a halt and many a cautious detour to avoid the lines that already fully through some cottage window or chink in a door or some windowman at his post at some mill or foundry, till finally they reached the grounds surrounding the court-house and jail.

"I don't know how soft-hearted you are, Carson," Baker whispered the young man's ear, "but there's one thing a man full of feelin' like you seem to be ought to guard against."

"What is that, Pole?"

"Why, you know, if we get the poor devil out he'll be sure he's done for as he'll be sure to raise a awful row, begin'n 'em prayin' an' so tellin' what else. But for all you do don't open your mouth. Let 'em grin an' bear it—tough as it will be—till we kin get in a safe place. That 'll be folks listenin' in the houses along the way to the store, an' if you was to speak one kind word to them they'd sure give you up. To all intents we are hynders of the most detestable brand."

"I understand that, Pole," said Carson. "I won't interfere with your work."

"Don't call it my work," said Baker, admiringly. "I've been through a sight of secret things, but I never heard of a secret job as slick an' deep-sid as this. If she goes through safe I'll put you at the top of my list. It looks like it would work, but a body never kin tell. That Barrett is the best him to climb. I don't know kin well enough to foresee what stand he'll take. Boys, have your eyes ready, an' when I only you to take then you do it as if you hated to shoot whatever is in front of you. Our bluff is the biggest that ever was thought of, but it kin to go. Now, come on!"

Through the open gateway they started across the public lawn covered with fresh, green grass, to the jail near by. A dog chained in a kennel behind the jail waked and snarled, but he did not bark. There was a little perch at the entrance of the jail, and along this the little ghostly band arranged themselves silently.

"Hello in thar, Hurt Barret!" Pole suddenly cried out. In sharp, stern tones. And there was a pause. Then from the darkness within came the sound of some one striking a match. A sickening light flared up in the room on the right of the entrance, then the voice of a woman was heard.

"Hurt, what he it?" she asked, in a startled tone.

"I don't know: I'll see," a coarser voice made answer. Another pause and a door on the inside was opened, then the outer, and Hurt Barret, half-dressed, stood staring at the gruesome assemblage before him.

"We've come after that nigger," said Baker, succinctly, his tone so low in his throat that even an intimate friend would not have recognized it, and he raised his coil of rope and tapped the edge of the door suggestively.

Barret, as many a brave man would have done, stood helplessly bewildered. Presently he drew himself together and said, firmly:

"Gentlemen, I'm a sworn officer of the law. I've got a duty to perform and I'm going to do it." And thereupon they saw the barrel of a revolver which the jailer held in his hand. In the awful stillness that rattled his words the click of his hammer as the weapon was cocked sounded sharp and distinct.

"Too bad, but he's goin' to fight for it, boys," Pole said, with grim faculty. "He is a white man in looks, but he's jined forces with the black devils that are best on reds' land. Steady, take aim. If that's less'n twenty balls in his carcass when he's examined in the morgue, it will mean some member's eternal disgrace. Aim!"

There was a startled scream at the half-open window of the bed-room on the right, and the jailer's wife thrust out her head.

"Don't shoot 'im!" she screamed. "Don't! Give 'em the keys, Hurt. Are you a fool?"

"He certainly looks it," was Baker's comment, in a tone of well-earned, only half-trilled rage. "Give 'em ten seconds to drop them keys, boys. I'll count 'em. When I say ten blow away an' let a yawnin' hell take 'em."

"Gentlemen, I—"

"Hurt! Hurt! What do you mean? Are you plumb crazy?"

"One!" counted Pole, "two! three—"

"I want to do what's right. Of course I'm overpowered, but—"

"Five! six!" wailed Pole, his voice ringing out clear and fierce.

There was a jagging of steel; the spectators, peering through ragged eyeballs in their white rags, saw the bunch of keys as it emerged from Barret's pocket and fell in the doorpocket.

"Gentlemen, you'll regret this night's work," he said.

"What do you care what we regret?" Pole said grimly, "just as you ain't turned into a human suffer. Now," as he stooped to pick up the keys, "you git back in thar to jore wif an' children. We simply mean business an' know what we are about. Aw' look here, Hurt Barret," and Pole nudged Carson, who stood close to him, "thar'll be another gang here in a few minutes on the same busi-

"We've come after that nigger," said Baker, succinctly

not from his heart, which really was deeply moved. "Bring 'em on!"

Two of the spectators seized Pole's hands just as his quaking knees bent under him and he was falling down. He started to slip back, and then, evidently realizing the utter futility of resisting such force, he allowed himself to be dragged through the door at the cell and down the narrow stairs.

"I never done it! before t'ad I never done it!" he wailed, sobbing like a child. "Don't kill me, white folks, t'ime one chance. Tek me ter Marce Carson Dwright; he'll tell you I ain't no man."

"He'll tell us a lot!" growled Baker, with another of his mechanical outbursts. "They nigh!"

"Oh, my God have mercy!" For the first time Pole noticed the coil of rope and the sight of it filled him with renewed terror. On his knees he sank, trying to cover his eyes with his imprisoned hands and quivering like an aspen. Hardly knowing what he was doing, Carson Dwright impulsively bent over him, but before he had opened his lips the watchful Baker had rudely drawn him back.

"Don't, for God sake!" the mountaineer said, warily, and he peeped across the street to the houses near by. Indeed, as if to sanction his precaution a window in the upper story of the nearest house was raised, and a white-haired and pale man looked out. It was the leading Methodist preacher of the place. For one moment he stared down at them, as if struck dumb by the terror of the scene.

"Is the name of Christ be merciful, neighbors," he said in a voice that shook. "Don't commit this crime against yourselves and the community you live in. Spare him; in the name of God, hand him back to the protection of the law."

"The law be hangin' person," Pole retorted, as part of his trying ruse. "We are looking after the law; thar hain't no law in this country that's with a hill o' beans."

"Be merciful—give him a chance for his life," the preacher repeated.

box in the lumber accumulation of conical prisms. Here and there shines a white shirt beneath a great dunsm. Caspary, the singer, never performed a more difficult feat than that of the postman in the lower left-hand box who is balancing a hired No. 6 silk hat upon a No. 7 head. But the relevant attention it provides and the discomfort of the pretty girls compensate for the discomfort.

An introduction is being performed. The youth does not remove his hat, but his head moves stiffly, and an angular thrusting forward of his right hand would indicate that he desires to shake hands. At least, it seems so, for the lady shakes.

Programmes are called into being. Indignation is rife. Unpleasantly expected to hear an opera, and fondly desirous friend Shilsky, who sold him his ticket. Gordil, like tragedy, and does not hesitate to deny the taste and culture of any one who professes opera. The assertion of individualism is primarily to be effected only by the useful actor, who explains that an operatic drama is to be performed, which doubtful statement quells the belligerents, and peace prevails.

We are disturbed by the evident volition of Mrs. Blum. She is expatiating with the manager. Every seat is taken, yet she is short more seventy dollars. The judgmental approach of a patron who has paid seventy-five cents for a quarter seat shows some light upon the situation. Mrs. Blum, unable to understand why so many seats were selling for a quarter, had collected the happy idea of changing all the late arrivals seventy-five cents, irrespective of the seat sold. During the wrath of the late comers, and the joy of the early. The only fault, from a financial standpoint, was that she had waited too long, and the benefit will not be a great lot.

But the bewailings of the automatic beneficiary are cut short by a cry of "Hats off!" the curtain rises, and the play is now the thing.

Mam' Linda

(Continued from page 895.)

Hearing that plea in his behalf, Pete screamed out and tried to extend his hands supplicatingly towards his defender, but in Boker's instant order—was dragged, now struggling more desperately, farther down the street.

"Ah, Pete, tell the pice—" Keith Gordon began, when the moultaineer sharply commanded:

"Dry up! You are disobeyin' orders! Hurry up, bring 'im on. That other pice may hear this racket, and then—Come on, I tell you! You violate my leadership, and I'll have you court-martialed."

In some fashion or other they moved on down the street, now taking a more direct way to the store in the fear that they might be met by the expected lynchers and failed in their purpose. They had traversed the entire length of the street leading from the court-house to the bank building, and were about to turn the corner to reach the rear door of the store, when in a spasm of fresh despair Dave's knees gave way beneath him and he sank limply to the sidewalk.

"Lord, I reckon we'll have to tote 'im," Pete said. "Pick 'im up, boys, and be quick about it. This is a ticklish one, but one person see us and the game will be up."

Pete clearly misinterpreted this, and seeing in the words a hint that help or protection was not far away, he tenderly opened his mouth and began to scream. As quick as a flash Carson, who was immediately behind him, put his hand over his lips and said, "Hush, for Gosh sake, Pete, we are your friends!"

While his mouth closed by the hand still on it, the negro could only stare into Carson's neck, too terrified to grasp more than that Dwight was with him.

"Hush, Pete, and a wuz. We are trying to save you," and Carson removed his hand.

"Who dat? Oh, my Gosh, who dat spoke?" Pete gaped.

"Carson, Dwight," said the young man.

"Now, hush, and hurry."

"Thank God, it's Marse Carson! Oh, Marse Carson, Marse Carson, you ain't gwine for let 'im kill me?"

In a rush they now bore him round the corner, and then, pausing at the door of the store to be certain that no extraneous eye was on them, they waited breathlessly for an order from their leader.

"All right," presently came from Pete's deep voice in a great length of relief: "open the door, Blackheads!"

The shutter cracked and the entry back into the black world within and the three pressed inward. The door was closed. The darkness was profound.

"Wait, listen!" the moultaineer said. "That might be somebody on the sidewalk at the front."

"Oh, my God, Marse Carson, is you here?" came from the quaking negro.

"Sh!" and Pete imposed silence. For a moment they stood as still as the only parting of the negro, like a fired dog, was audible.

"All right, we are safe," Boker said. "But, gosh, it was a close shave. Surface a light an' let's try to ease up this feller. I better be so rough, but it was the only chance."

"Yes, it had to be," said Dwight. "Pete, you see with friends. Strike a light, Blackheads, we're scared out of our wits yet."

"Oh, Marse Carson, what dis meant? What you all gwine to do ter me?"

Blackheads had groped to the lamp on the table, and was scratching a match and applying the flame to the base of the lamp. The yellow light flared out, and in a strange sight met the bewildered gaze of the negro as familiar faces and forms gradually disclosed, and grasping his hand, Pete clung to it desperately.

"Oh, Marse Carson, what dis grime ter do ter me?"

"Nothing. Pete: you are all right now," Carson said, as tenderly as if he were speaking to a hurt child. "The mob was coming, and we had to do that to save you." He explained the plan of keeping him hidden in the cellar for a few days, and asked Pete if he would consent to it.

"I'll do anything you say, Marse Carson," the negro answered. "You know what's best fer me."

"I've got an old mattress here," Blackhead spoke up. "Boys, let's get it into the cellar. It will make him comfortable."

And with no sense of the incoherence of their act, considering that, as the case of the negro, they had never in their lives waited upon a negro, Wade Tingle and Keith Gordon drove the dusty mattress from a dry-goods box in the corner of the room and bore the cumbersome thing through the cellar doorway into the redoubtable darkness beneath.

To be Continued.

Answered

The would-be snuffpotter was having the usual dinner-table argument with her alleged lord and master, when that unhappy individual, finding himself in a close corner, requested the unfortunate query:

"How on earth would you earn a living if I wasn't for me?"

"I don't know, John," the lady replied. "If I had you, I don't know where I'd get another job."

American Motor-boats Abroad

CARSON, F. S. S. JEFFERSON notes with regret that American motor-boat manufacturers are not taking advantage of the Bregm Motor Exposition to be held in that American city during the month of July. He writes:

"Only a few applications from the United States have been filed with the committee, while the number from European countries

have been so many that more buildings and a larger space for exhibition are now contemplated by the committee. I requested the collector of customs to state if exhibits would be admitted free of duty. He informed me that the exposition committee had applied to the government for the free admission of goods intended for exhibition, which he had intended, and which application he believed would be granted. I therefore urge all manufacturers of motor-boats in the United States to participate in this exposition, as it will in all probability open up a new market for these goods."

The Chief Trouble

"It is a sad fact," said the statistician, "that the ordinary waste of food in an English middle-class family would be sufficient to maintain wholly a French family of similar station."

"True," said the epicure. "And it is also a grating fact that the average French family couldn't be hired to eat it after it had been cooked by the average English middle-class family, so that, after all, it is not wasted as far as France is concerned."

ADVERTISEMENTS

BAD DREAMS

Caused by Coffee.

"I have been a coffee drinker, more or less, ever since I can remember. I used a few months ago I became more and more nervous and irritable, and finally I could not sleep at night, for I was horribly disturbed by dreams of all sorts, and a species of distressing nightmare."

"Finally, after hearing the experience of numbers of friends who had quit coffee and gone to drinking Postum Food Coffee, and learning of the great benefits they had derived, I concluded coffee must be the cause of my trouble. So I quit Postum, and had it made strictly according to directions."

"I was astonished at the flavor. It entirely took the place of coffee, and, in my very great satisfaction, I began to sleep peacefully and sweetly. My nerves improved, and I wish I could warn every man, woman, and child from the unwholesome drug (caffeine) in ordinary coffee."

"Though really not an experienced reader what a powerful drug it is, and what terrible effect it has on the human system, I would never think of going back to coffee again. I would almost as soon think of putting my hand in a fire after I had once been burned."

"A young lady friend of ours had stomach trouble for a long time, and could not get well as long as she used coffee. She finally quit it and began the use of Postum, and now perfectly well." "There is a reason. Read the Story 'Health Classic.' 'The Road to Wellville,' in packages."

A FAMOUS OLD SCHOOL FOR BOYS

THROUGHOUT the entire land there is no spot more attractive or more popular for a school site than the banks of the Hudson river. Here a multitude of rich historical events are localized, dating back to Revolutionary days. Here tread the feet of Washington and Hamilton; near by Irving sanctified the soil with his immortal legends of Sleepy Hollow; while upon the very spot where we stand the brigade of General Israel Putnam camped, and upon a limb of the venerable oak upon the campus yonder he hung a cowardly spy; and that wasn't many years before the town of Peekskill resolved to subscribe the money with which to found an Academy.

True, the school has antedated its first class, which assembled seventy-five years ago, in the colonial building that still crowns the top of Oak Hill, and there began the onerous task of learning to "read, write, and cipher." What amazing strides in education since that date! And what amazing development in the old Peekskill school! The beneficent bounty of the generous citizens, who aspired to have their sons able to stand well with the other boys of these post-colonial days, was not wasted; now was the example unfurled; for, as the years have advanced the educational standards of the United States, those standards have been adapted at Peekskill.

Coming down to the antebellum date of 1857, when the rumbling of impending strife was just beginning to be heard, the original idea struck Principal Wells that military discipline would invest citizenship with something that might, at no distant day, become a very valuable asset of civic education. How well the good Wells heeded he certainly never knew, for, although he inaugurated military discipline at the Peekskill school in 1857, and therefrom it took the title of The Peekskill Military Academy, it was not until after the Civil War terminated that other civic schools adopted the same regime. The school, as we see it to-day, is a splendid aggregation of comfortable buildings perched upon the crest of the gentle mountain that rises above the village of Peekskill. The incensing air comes sweeping across the majestic Hudson from the Highlands, or bays of the pinnacle of Dunderberg Mountain, just across the river; beneath lies the pretty village with its beautiful homes.

The original campus, beautifully situated upon the towering eminence of Oak Hill, overlooking the Hudson River at its most picturesque turn, has just recently been doubled by a large tract of adjoining plateau property, donated to the school by one of its most illustrious Alumni, Hon. Chauncey M. Depew, class of 1862. Ten thousand dollars were set aside for the grading of this field by the Alumni Endowment Fund Committee.

The Peekskill boys at present are in a fever of delight over this splendid gift of Senator Depew and the Alumni; for therein they realize that they now have one of the finest athletic fields in the land. And the principals are taking great delight in the development of plans for additional structures, including a new dining hall and chapel, together with new recitation halls and a swimming pool, adjoining the present gymnasium, one of the finest in the country.

The funds necessary for these improvements have been already provided for through the Alumni Committee. No school is more noteworthy for the enthusiastic fidelity of its Alumni, and that the "Old Boys," three thousand strong, should always remain loyal to the Old School is the crowning glory of its history.

It might be expected that after seventy-five years of successful career, Peekskill Academy would have a notable faculty of

preceptors; but it is questionable if, outside a university, so eminent a faculty is to be found as here. C. A. Robinson, Ph.D. (Princeton) and John Hopkins, is professor of Latin, for eight years serving in a similar capacity at Princeton University. J. C. Butler, A.M., is Professor in English. A. M. Hillebrand, Ph.D., teaches mathematics, and is nationally noted as an authority in this branch. Rev. D. E. Leinard, of Hamilton, is head of the department of history. Professor U. B. Chaylesor, of Williams, instructs in French. Professor H. M. Glasgow, of Oxford, England, assists in English and mathematics. Professor J. T. Barrett, a Johns Hopkins man and himself a school principal, teaches sciences. Professor E. J. Barber, of Yale, instructs in Latin and Greek, and Professor G. H. Nisard (Hamilton), assists in mathematics and sciences. Professor S. F. Holmes, A.M., instructor of English, was for three years a member of the Wesleyan University faculty.

The numerical strength of this faculty may surprise; but there is a distinct purpose in it. The design is to have a sufficient force of skilled instructors, so that pupils may be divided into two classes—those who are quick learners, and those who are not so quick; and by separating those classes, not retard the expeditious, nor yet embarrass those who acquire more slowly by forcing them with strenuous competition with swifter learners. Many a parent will say Amen to this wise policy, basing his opinion upon his own

experience when a student, remembering how hard it was for him, if he were rapid, to be held back by slower students, or, if he couldn't learn quite so fast as others, to be kept under nervous tension trying to keep up. It is ever admitted that it is no disgrace to be slow at study; for oftentimes that pupil absorbs more thoroughly. But at Peekskill they think it unwise to hamper either type by working them together, so they provide a faculty large enough to have practically two masters in every branch taught.

Another educational feature

of no mean value is the military system which obtains at this Academy. While the system is fully military in the sense that it is supervised by an active officer of the United States Army, detailed by the Secretary of War, it enters into the general life of the school not so much as a means of discipline as an instrument of culture. Its chief object is to so discipline the boys in self-control and self-management that they will—by their military relationships—actually conduct the school themselves, so far as the maintenance of honor, integrity, and manly conduct is concerned.

So it is valid to speak enthusiastically of "A Famous Old School for Boys" when referring to Peekskill Academy. To be impressive, one must talk largely in an impersonal way. The principals are modest men, feeling that they have a task and trying to do it; and the faculty have the wonted reluctance of proficient educators to praise of their work. The school to-day makes a magnificent showing, with a history of three-quarters of a century behind it. Still, proving the impersonal, it may be said that it has graduated some of the most eminent men in the country, who, upon leaving Peekskill, pursued their studies at the universities and to-day lead in their professions.

To get old is what everything human must do, but to be also famous is what we are all aiming after. This school has a ripe and venerated age, as well as an unswerving disposition for administering the salutary training that goes to the development of American manhood.

HOMICIDE AND THE DEATH PENALTY IN FRANCE

By MAYNARD SHIPLEY

THE legislators of France have voted favorably on the bill abolishing capital punishment. They did not do so, however, without a vigorous protest on the part of certain reactionaries, who see in the destruction of the bloody guillotine but another attack on the pillars of society.

Taking advantage of a peculiarly atrocious crime recently committed in Paris, advocates of the guillotine, supported by a number of French journals, are endeavoring to convince the people that an epidemic of revolting crimes has already begun, and that restoration of the death penalty can alone check the hand of would-be assassins.

It should be noted that for some years past there have been no executions in Paris; and in the provinces, also, the decapitation of a criminal has been of rare occurrence. In fact, the proportion of criminals executed to the number of homicides committed has grown so small that any deterrent effect such exhibitions might have if of more certain occurrence following a murder has certainly been lost as the penalty was of late applied in France. This fact is admitted even by proponents of the scaffold. It had come to be a question either of more executions or none at all. The people are now divided on this question. Advocates of the guillotine contend that homicide has increased in France as the direct result of declining rigor in the application of the death penalty, "that mysterious agent of authority" without which, many declare with Joseph de Maistre, "thrones are equigled and society disappears." If it is true that murders have increased as a consequence of too great leniency on the part of boards of pardon, the fact is of very material concern to all other peoples.

First of all, there can be no doubt about the decline in the number of executions in France. In the first quarter of the nineteenth century the annual average of persons guillotined was about one hundred and twenty; in the second quarter, about forty annually. From 1850 to 1900 the average number of criminals yearly beheaded had fallen to twenty-eight, and from 1809 to 1870 the average was reduced to about ten annually, falling to eight during the fifteen years ending in 1890. From 1853 to 1901 the annual average of criminals beheaded was but five. Of eleven criminals sentenced to the guillotine in 1900, only one met death at the hands of "Monsieur de Paris," as the chief executioner of France is familiarly known. Early in 1900 this high functionary's salary was omitted from the national budget, in anticipation of the legal abolition of the death penalty by the terms of the new code.

Concurrently with the above-noted decrease in the proportion of criminals executed to offenders condemned, the number of persons tried for murder has materially diminished, falling from 879 in 1853 to 420 in 1893, and to 356 in 1900, and this notwithstanding the alarming increase in juvenile criminality. Some statistics given by Dr. Paul Garnier, ex-official of the Paris Procureure of Police, show that thirty an increase from twenty juveniles arrested for murder in 1855 to fifty-five in 1894, one hundred and eighteen in 1898, and one hundred and forty in 1900. Dr. Garnier ascribes this increase of murders among the youth of Paris, not to in-

activity of the guillotine, but to certain definite social causes, chief among which he names "absolute hereditary and want of intellectual training." He thus as it may, the fact remains that, on the whole, the annual number of homicides in France has diminished more than fifty per cent, during the past twenty years, despite the decrease in the proportion of capital executions to homicides committed.

It is a significant fact that very few of the leading criminologists of Europe regard the death penalty with favor, and that the foremost thinkers of France are almost unanimously in favor of abolishing the guillotine.

In reply to the writer's inquiry on this question, Dr. Th. Ribot, President of the College of France, replied that, in his opinion, capital punishment has little or no advantage over imprisonment as a deterrent of murder. "Facts prove," says he, "that almost all those who have suffered the death penalty had been present at capital executions, or have at least greatly desired to witness them." Obviously the horrible spectacle had failed to inspire the fear expected.

"Almost all habitual criminals are of an anomalous disposition of mind and many of them declared madmen," writes Dr. Max Nordau. "As these are the worst offenders, they are particularly liable to be the victims of antiquated criminal laws."

Dr. Pierre Janet, the eminent psychologist, observes that, "for one who has been accustomed to disciplining in the schools, or anywhere, it is easy to see that what infames most of the individuals capable of committing criminal acts is not the gravity of the penalty to which they expose themselves, but the certainty of the penalty."

Professor Ch. Richet remarks: "Society has a right to protect itself, that is certain; it is much less certain that it has the right to punish. . . . To sum up, it seems to me that society would be just as safe without the death penalty, and that it would not have that awful example,—to inflict death in order to teach men to respect life."

Professor E. Durkheim, the distinguished sociologist, replied, in answer to the writer's question, "I know of no facts that permit me to think that the abolition of the death penalty would result in encouraging and reinforcing homicidal tendencies. The experiments made in several countries of Europe, namely, Italy, Holland, and Portugal, show the opposite. . . . The criminal, especially the violent criminal, does not think of the possible consequences of his act when it is accomplished. On the contrary, however, capital punishment has necessarily for effect to develop homicidal tendencies. . . . The true means for the enforcement of the desired respect for human life is that society itself refrain from taking human life for any reason."

Half a century ago Victor Hugo declared: "The law that dips its finger in human blood to write the commandment, 'Thou shalt not kill,' is naught but as an example of legal transgression against the precept itself."

The best minds of France to-day seem to agree with Victor Hugo.

Saved

A CERTAIN lady, noted for her kind heart and open hand, was approached not long ago by a man who, with tragic air, began: "A man, madam, is often forced by the whip of hunger to assay things from which his very soul shrinks—and so it is with me at this time. Unless, madam, in the name of pity you give me assistance, I will be compelled to do something which I never before have done, which I would greatly dislike to do."

Much impressed, the lady made haste to place in his hands a five-dollar bill. As the man pocketed it with profuse thanks, she inquired:

"And what is the dreadful thing I have kept you from doing, my poor man?"

"Work," was the brief and mournful reply.

Abstemious

A Boston minister says that not long ago he was dining with a friend. Another guest present was a young man from Kentucky, and the minister, who had been pleased by the youth's somewhat difficult yet self-possession manner. He also noted that the young man had left his wine untouched.

"Don't you drink wine, Mr. Clayton?" the charming minister of the host asked, lifting her own glass and smiling across at the young man.

"No, I never do," he replied, blushing.

"Oh, but I am sure you will this time—just one little glass with me!" she insisted.

"No, thank you," was the resolute reply, and the minister looked upon him with growing admiration. The young lady very nearly achieved a point.

"You won't, then?" she asked.

"No," was the firm reply, though the blush of embarrassment deepened on his cheek. "I never drink wine," he added; "but if—er—you have got little old Bourbons, I reckon I could stand three or four fingers."

A Literal Translation

Wuxu, tinent Kuroki visited Yale and heard the college yell, he turned to one of the interpreters in the party and asked, "What are they saying?"

"They have just remarked," explained the interpreter, "that they are very glad, indeed, to see you, and that they hope you will come again and stay longer. They congratulate you upon your victories in the East, and, in conclusion, they wish to inform you that you have been unanimously elected a son of a tumbler."

Stung

THERE is a law in Texas which requires commercial travelers to purchase a license before they may do business, a law either unknown to, or disregarded by, a certain patent-medicine man from New England. He was just emerging from a drug-store, where he had placed an order, when a stranger came up and addressed him.

"You sell Brown's Boston Bitters, don't you?" the stranger asked.

"Yes, and I'd like to sell you a case—sure you are quick you won't have been sick yesterday—fact!" the drummer said.

"All right. How much is this?" the stranger asked, pulling out his pocketbook, and handing over the five dollars demanded, resolving to exchange an order on the local freight-agent for his case.

"Now, I'd just like to see your license to peddle—I'm the sheriff," the stranger said, indignantly.

"You've got me—twenty-five, isn't it?" the drummer asked, offering the money. "I don't suppose it will be necessary for me to appear!"

"That will be all right," the sheriff replied. Then he looked at the order for the case of medicine. "What am I going to do with this stuff?" he asked.

"I'll give you a dollar for it," the drummer suggested, and the trade was made.

"And do you happen to have a license to peddle? Huh, I thought not. Well, you have been trading with me—selling goods without a license—guess I'll go file a complaint against you," the drummer said, solemnly. And the next morning the sheriff, with a sheepish grin, paid a fine of twenty-five dollars.

Smiling Joe

You saw him last summer. He runs around now just like other children. And the Hospital at the Seashore for which he pleaded, to save others from being crippled for life by tuberculosis of the bones and glands, is assured.

But the Battle is Still On

with the dark, crowded tenements which manufacture crippled children and break down their parents.

Our twenty-five visitors, trained in the school of loving service daily carry relief, wine, counsel, and courage into the darkest homes. Would you not like to have a part, real and personal, in this work, by sending a gift to carry it on? If desired, we will gladly write just how and for whom it is used.

Last Summer

friends all over the Union, from Alaska, and Canada, helped us give Fresh-Air Outings to 23,051 women and children. Our Sea-side home,

Beautiful Sea Breeze

with its cool shade, good food, clean sand, ocean bathing, is ready to welcome 25,000 this summer.

How Many Will You Send?

25 cents gives a mother or child one glorious day of freedom, sweet cool air, good food and fun in the sand and sun.

\$1.00 lets a little family enjoy it all together.

2.50 will give a whole week of new life and cheer to a worn out mother, an aged father, an underfed working girl, or a convalescing patient.

5.00 makes a teething baby and its "little mother" of us happy for a week.

10.00 gives ten run-down school children a fresh start for next year.

25.00 sends a car-load of convalescing people off for the day and brings them back with new courage.

50.00 names a room for the season.

125.00 gives a happy vacation to 500 mothers and children.

\$50,000 NEEDED FOR THE SEASON'S WORK

The Mystics

By KATHERINE CECIL THURSTON

Author of "THE MASQUERADER"

FRONTISPICE FROM "THE MYSTICS"

A YOUNG man, whose fanatic uncle wills away the family estate to a secret brotherhood, discovers the secrets of the society, and plans a daring *coup* to recover his possessions. He appears as the Mystic Prophet whose advent is daily awaited, and is accepted as the Head of the secret order. In this precarious situation the hero falls in love, and, at the peril of life and all, boldly chooses to play the lover's part. Romance and mystery are delightfully mingled throughout. The tale has the same persistent excitement and breathless fascination which marked "The Masquerader."

For July

How Microbes Can Cure Disease

Professor ROBERT KENNEOY DUNCAN, of the University of Kansas, tells of one of the most remarkable discoveries in the new practice of medicine—a discovery made by a distinguished English investigator, that the most deadly microbes have their use in the curing of disease. Thousands of these microbes, when dead, are injected into the blood with the most surprising results.

The Origin of a Famous Legal Battle

No legal battle in the United States has equalled the famous Dred Scott case in point of historic interest, yet its origin has remained largely a mystery for half a century. FREDERICK TREVOR HILL has made a minute study of the case—who the plaintiff and defendant really were, what the forces behind them were. The story is here told for the first time.

Life in a Bird Colony

Mr. A. W. DIMOCK recently visited a secluded part of Florida where hundreds of species of birds make their home. He went to study the birds and not to shoot them. No gun was fired, and the birds, seeing they were not to be injured, soon became perfectly tame. This article is illustrated with remarkable photographs.

Fictitious Travel in Phantom Lands

DE SCOTT-KELTIE, of the Royal Geographical Society, has made a study of the curious old-time narratives of travel and of the astonishing ideas of geography embodied in the fabulous tales of the ancient writers. His article is accompanied by many quaint and amusing old drawings and maps.

Where King Edward is Still a Duke

ROBERT SHACKLETON recently visited the quaint Channel Island of Guernsey. He writes of the strange customs prevailing there, the curious form of government, the survival of the old French laws, and many other interesting features of life among these isolated people. Illustrated with drawings by Ernest Haskell.

In Diplomatic Society

Madame de BUNSEN, the widow of the distinguished German diplomat, continues her narrative of her first experiences in the society of the diplomatic world at Turin.

8 Distinguished Short Stories

Variety, vitality, and interest are the keystones of the short stories of HARPER'S. Those in the July magazine are typical.

STEPHEN F. WHITMAN has written an exquisitely humorous yet dramatic story of how a little Frenchwoman, going out for a walk in Paris under King Louis, started a war and won a noble husband. MURIEL CAMPBELL DYAR writes of two very real American country boys who were carried away by their admiration for an older and "tougher" boy and led into imitating him most slavishly. ANNE O'HAGAN's story, "Bread Eaten in Secret," is a love-story involving a strange psychic experience, and HARRIET PRESCOTT SPOFFORD writes in contrast of a romance of village life. THOMAS A. JANVIER tells a grim and supernatural story of the old days in Mexico, and GRACE ELLERY CHANNING contributes a delightful little love-story of married life. ELMORE ELIOT PEAKE, always a strong writer, tells a striking tale of a Southern mountaineer, and how a family feud is ended through his love for a fearless girl.

There are many pictures in color and tint in the July MAGAZINE—pictures as interesting as the writing.

COMMENT

Senator Raynor and Mr. Bryan

SENATOR RAYNOR has written a strong and rational letter to the *New York World*, in which he takes the sensible position that it is the duty of the Democratic party in the coming campaign to be true to its traditions—to be conservative without being reactionary. Men of both parties are interested in the fate of the historic Democratic party. Even those who are now with undue excitement cheering on the public men who are chasing, without discussion, passions and prejudices, as well as good intentions and wise purposes, into laws, will one day return to our racial and national faith in deliberation, in thoughtfulness, in carefulness. The need of an opposition party is always with us, and in that need is implied necessarily the theory of *progress* that civilized government is government by discussion. Mr. RAYNOR is a Democratic leader of power and of influence, and he sketches a platform for his party which, if adopted, will make it a real opponent of the party now in power. He says, and says truly, that the tariff affords the real issue between the parties. There is no issue between Republican revision and Democratic revision, but between two parties who take opposite views of a tariff. The Democratic party, if Mr. RAYNOR's view prevails, regards a tariff tax as one imposed principally for the benefit of the general welfare, while the Republican party regards such a tax as one imposed principally for the benefit of a favored class. Here is the real issue, as Mr. RAYNOR suggests, and herein are enfolded all other fiscal and economic issues. Mr. RAYNOR names other issues: he is opposed to a Federal or any movement internationalism, and he is also antagonistic to the active movement to deprive the States of their rights, either by judicial constructions of the Constitution, or by Congressional legislation, or by Executive ignoring of the granted powers and expressed restraints. In brief, Mr. RAYNOR's plan, which is not acceptable to Mr. BRYAN, would construct a real opposition party, an end of which all intelligent students of government, whether they agree or disagree with Mr. RAYNOR's programme, will approve. Mr. BRYAN has also spoken. He seems to be doubtful about his own candidacy, and will be, for he is still infected with the idea that the main virtue of the Democratic party as a political power lies in what he alludes to as Mr. ROOSEVELT's "stalling the thinker composed in the BRYAN workshop." The evidence shows that the Democrats are growing weary of this iteration.

The South and Mr. Bryan

It becomes more and more certain that the opposition to Mr. BRYAN in the South is increasing in vigor and, presumptively, in numbers. Not only are the Democrats of the Southern States, like their fellow partisans of the North, looking about them for other men who may be better candidates than Mr. BRYAN, but they believe that they are dis-

covering them. The impatience with which Mr. BRYAN's frequent appearances are received, if we are to accept the remarks of Southern newspapers as expressive of the feelings of the communities in which they are published, also indicates his waning popularity. The good taste of his visit to attend the Confederate veterans' reunion is questioned. Whether the criticism be sound or not, it is indicative of sentiment. But it is not only in sentiment, in feeling, in expressions of loss of faith, that the Southern newspapers are indulging. They are giving excellent reasons for not desiring Mr. BRYAN as the Democratic candidate in 1908. The *Baltimore Sun*, for example, which is one of the calmest and most trusted of Southern Democratic newspapers, declares that Mr. BRYAN is not the kind of Democrat the South believes in. The South does not believe in wiping out State boundary-lines, as do Mr. BRYAN and Mr. ROOSEVELT. Its people understand perfectly that this would be accomplished by the government ownership which Mr. BRYAN advocates. Moreover, the *Sun* believes that the tariff is the issue, and asserts that the majority of the Southern people agree with it, while it holds that Mr. BRYAN is lukewarm concerning it. It is not, therefore, true that people are opposing Mr. BRYAN merely because they are weary of his eloquence, although it is evident that some are so moved, stimulating and impressive though that eloquence has been; but because Mr. BRYAN's political convictions and policies do not fit in with the thinking of men whose votes are necessary to the making of either a Democratic candidate or a Democratic President.

A Southern Democratic Candidate

The talk of a Southern Democratic candidate for President may, unexplained, mislead people who are prone to mistake allusion for advocacy. The *Houston Post* speaks the right word when it says, "We do not ask the Democratic party to nominate a Southern man because he is from the South, but we do ask that our statesmen be considered upon their merits, and not debared without consideration because they are from the South." This is an expression of the South's conviction that a Southern citizen of the United States shall enjoy all the privileges of his birth and his citizenship without any question, and without the thought of question, precisely as we impose upon him, or accept from him, gladly and thankfully, the sacrifices of citizenship. We cheered the Southern volunteer as he marched to the Spanish war, and as we hailed him as a brother in arms, we could not patriotically question his right to any of the honors of the state because his father or grandfather fought with Lee or Jackson. It seems as though this explanation should not be necessary, but it was in the mind of the *Houston* editor, when he wrote his paragraph, that it had been the fashion to deny his people's rights to struggle for high national honors, and that they had so keenly felt this that they had lost the feeling that the republic would be incomplete until, as the *Post* says, their statesmen are "considered upon their merits and not debared without consideration because they are from the South."

Ohio and Harmony

For some reason the Ohio trouble becomes more and more difficult of precise understanding. One day an announcement is made that harmony between the factions has been contracted for by Brother CHARLES and Senator DICK, and that Secretary TAFT is to be the Ohio candidate for President and that Senator FORAKER is not to be opposed for a third term. The next day Mr. FORAKER denies that he has taken any part in making any such agreement, notwithstanding the fact that his headquarters are closed. All this may be strange to the people of other States, but not to Ohioans. They understand because they are lived in their own political ways. Of one thing we may all be sure—Ohio has not yet obeyed any orders about her delegates or her next Senator.

Mr. Knox's Candidacy

The Pennsylvania Republican State convention not only declared that Senator KNOX was the choice of the State for the nomination of 1908, but Mr. KNOX accepted the honor. It is asserted that this candidacy was very gravely received by the President and by other leaders of the movement for Mr. TAFT, and that they have begun to take active steps,

It is, on the whole, a curious movement. Mr. KNOX, when he was Attorney-General in Mr. ROOSEVELT'S cabinet, was not only a decided favorite of the President, but Mr. ROOSEVELT admired him immensely. Mr. KNOX was certainly of great use to him, and greatly helped to further some of the most important of his designs. Since Mr. KNOX left the cabinet to enter the Senate, Mr. ROOSEVELT regretfully expressing his willingness, there has not been apparent between the two that complete union which once existed. It may safely be said that Mr. KNOX'S candidacy is not one that Mr. ROOSEVELT can heartily desire, while it is one that he cannot openly and aggressively, at least not yet, oppose. How strong a fight the tainted Pennsylvania machine can make in behalf of Mr. KNOX or anybody else depends mainly upon the moral quality of the next Republican national convention. It is interesting to note that the *Philadelphia Public Ledger* gives as one reason for taking the KNOX candidacy seriously, that the "country cannot forever dwell in the midst of alarums." There are many indications that it has grown weary of hunt—not of food of which is the President's own carefully balanced speech at Indianapolis."

Governor Hughes Does a Valuable Service

THE reasons given by Governor HUGHES for vetoing the two-cent fare bill are fit to be attentively considered by all members of State legislatures which have been busy with similar legislation, and by all Governors who have signed like bills. Pointing out that "an arbitrary dislocation of tariffs by the fiat of the Legislature without investigation is a matter of serious concern," and that "if flat freight-rates, either for all commodities or for different kinds of commodities, were similarly to be fixed by the Legislature without investigation or proper ascertainment of their justice, our railroad business and our industrial and commercial interests would be thrown into confusion," he goes on to say:

I do not mean to be understood as saying that a maximum two-cent passenger rate would be unreasonably low. It might be high enough in many cases. Possibly it would be high enough in all cases. I fully appreciate the fact that those who have promoted this bill believe that such a rate would be fair. But I deem it most important that the policy of dealing with matters of this sort arbitrarily, by legislative rule of general application without reference to the demands of justice in particular cases, should be condemned.

Every working man, every trade-union, and every citizen believing himself to have aught at stake in the prosperity of the country should determinedly oppose it. For it not only threatens the stability of business enterprises which makes our prosperity possible, but it substitutes unreason for sound judgment, the ill-considered demands of resentment for the spirit of fair play, and makes impossible patient and honorable effort to correct abuses.

That is excellent sense, and the country is to be congratulated on having it officially expounded in a veto message by a Governor of New York. "The bill," says Governor HUGHES, "represents a policy seriously mistaken and pregnant with disaster." So it does, and so do all like bills wherever passed.

The Mayor and the Recount

THE bill for a recount of the majority vote of 1903 is not a sound piece of legislation. It may be that Mayor McCLELLAN was not honestly elected, and that a recount of all the votes would show that Mr. HEWITT should have had the office. It does not follow that, more than a year afterwards, there should be a law passed providing for a recounting of some of the ballots, and a reopening of a controversy which, under the law as it existed at the time of the election, was settled. A good many competent public philosophers believe that election controversies should be settled once forever, and object to any recount of votes. Mr. SUMMIT J. THURDS was one of these, and that, too, at a time when he was doing his utmost to dethrone Tammany, and when Tammany was in command of the ballot-boxes. It is perfectly true that Mr. McCLELLAN ought not to want the office if he was not honestly elected to it, and there is no evidence, in his objections to Governor HUGHES'S recount bill, that he is of any other mind than that of an honorable man. But it is a law of doubtful expediency that singles out one city for its operation, one election in that city, while it provides for only a partial recount, making it at the same time so costly for the defeated Mayor to defend his rights that an attempt to do so thoroughly would bankrupt any man not very wealthy. The State and the city may be especially interested in the immediate controversy between the two men, but this is

a bit of legislation that is bad, according to all sound theories of lawmaking, and is characteristic of a time when a new law, passed without discussion, is supposed to afford the proper remedy for any evil that may occur to the mind of any statesman.

The New England "Merger"

NEW England, Boston especially, is naturally much stirred by the so-called merger between its Boston and Maine Railroad and its nominal New York, New Haven, and Hartford Railroad. It is not, indeed, a merger, or even a lease of the one road by the other. Certain people who own a good deal of the New Haven stock have acquired a controlling interest in the Boston and Maine road. A good many people, however, are alarmed by the alleged consolidation of the two vast properties. They are not indeed, for after the purchases of Boston and Maine stock by the New Haven stockholders—or the exchange of one stock for the other—nearly all of the railroad business of New England will be carried on by the same set of share-owners. The two roads, however, will remain separate corporations, managed by separate officers and separate boards of directors, while the Boston and Maine will continue to be a Massachusetts corporation subject to the laws of the commonwealth. President MELLIX of the New Haven road promises great advantage to New England and to Boston by the union of interests between the two roads, and it is well known that New England has much to complain of because of existing transportation conditions, and because of the discriminations against her resulting from the working of the present tariff law and the rulings of the Interstate Commerce Commission against Boston and in favor of Philadelphia and Baltimore. Boston has had a sad foretaste of the effects of Federal control. Governor GRANT has taken action on the change of ownership of the Massachusetts corporation, and has sent a message to the Legislature recommending the enactment of new laws. Senator LEACH sustains his action; but each one of them is probably a trifle hasty, especially in asking for laws against overcapitalization, since Mr. MELLIX has promised that there shall be nothing resembling water. Each seems to have been convinced by the remarkable reasoning in the Northern Securities case, that the possession of a power for evil is equivalent to the doing of the evil. This assumed merger is of such a character that it appears as though it might be a good time for lawmakers to wait awhile. If any wrong is actually done, Massachusetts, the creator of the Boston and Maine, has the remedy in her own hands; but the combination may work good to the community, and if it does, good may be done to all who are either reflecting or shouting on this subject. At all events, New England's experience suggests that it will be well for Massachusetts not only to keep her head, but to maintain her control over the subject as her own.

Great Britain and France at the Peace Conference

THE second peace conference meets at The Hague under circumstances materially different from those of its predecessor in 1899. Even then it could be foreseen that upon all questions concerning which a conflict of opinion or interest was probable the three Powers constituting the Triple Alliance—Germany, Austria, and Italy—would act together. A similar cooperation could be predicated of the two Powers composing the Franco-Russian League. Great Britain, on the other hand, entered the former conference as untrammelled as was the United States. She will have no such liberty of action to-day. Her hands are tied by treaties with Japan and with France; she has also entered into treaties with Italy and Spain which define the respective interests of the signers with reference to North Africa; and she is on the eve of concluding an arrangement with Russia which shall delimit for a term of years the respective spheres of influence of the two Powers in Asia. Thus fettered in every direction, the British Foreign Office will have to consider the wishes of the cosmocrators of all its treaties before taking a definite position with regard to any one of the subjects likely to occupy the foreground of discussion. Yet even Great Britain will find itself less embarrassed by specific obligations than will France. Not only will the French government feel bound to counsel its Russian ally at every turn, but it must not lose sight of the duties imposed by a series of treaties with Great Britain, Italy, Spain, and Japan.

So far as central Europe and the Mediterranean are concerned, the good-will of Great Britain is of much more importance to France than is the good-will of France to Great Britain, and in eastern Asia the Tokio government could confer much greater benefits upon its French ally than it could hope to receive in return. It will, therefore, behoove the delegates of France to comport themselves at The Hague with peculiar circumspection and moderation. Fortunately, the French delegation is again to be headed by ex-Premier BURDEAU, who earned universal praise by the conciliatory course which he pursued in 1899.

The President's Georgia-day Address

PRESIDENT ROOSEVELT far exceeds any former President as a furnisher of news to the papers. He made two addresses during his visit to Jamestown on June 10, one in the morning at the Georgia-day exercises, and another in the afternoon to the National Editorial Association. Both times the President spoke out of an overflowing mind, and both speeches must have served excellently well their primary purpose of gratifying and interesting the audiences to which they were addressed. But, as usual, Mr. ROOSEVELT loaded both speeches pretty well up with sentiments and opinions about governmental and national concerns, which, coming from the President, are necessary subjects for rumination. After he had told the Georgians that he was half Georgian himself and proud of it, and that there is as much difference between rich individuals as between wage-working individuals, and that the South was growing wonderfully and needed immigrants and all kinds of schools, he went on to say that "there is increasing need that the welfare of the children should be effectively safeguarded by governmental action," and that "workmen should receive a certain definite and limited compensation for all accidents in industry irrespective of negligence." He added a declaration as to "the extreme un wisdom of the railway companies in fighting the constitutionality of the national employees' liability law," insisting that "no law is more emphatically needed," and that it "must be kept on the statute-books in drastic and thoroughgoing form." He closed this address by earnestly recommending an efficient navy, and pointing out that we must be kindly and considerate, and yet show that we have iron in our blood.

He Talked Taxation to the Editors

So in his afternoon address to the newspaper men, after reminding them of their responsibilities, and warning them against class, and party, prejudice, he spoke at some length on the conservation of our natural resources—public lands, irrigation waters, coal and oil lands, grazing lands, and forests—and of "the rephrasing of our system of taxation so as to make it bear most heavily on those most capable of supporting the strain." On this latter subject he expressed the opinion that in spite of the constitutional objections to an income tax and the difficulty of collecting it fairly, "a graduated income tax of the proper type would be a desirable feature of Federal taxation," and he hoped one might be devised which the Supreme Court would declare constitutional. He considered, however, the inheritance tax a far better method of taxation, and far more important for the purpose he had in view—"the purpose of having the swollen fortunes of the country bear, in proportion to their size, a constantly increasing burden of taxation." By such a heavy, progressive tax, bearing more heavily on collateral heirs than on direct heirs, and more heavily on persons residing out of the country than on persons residing in it, he thought we should try to preserve a measurable equality of opportunity for the people of the generation growing to manhood. So it will be seen that in both his addresses the President dwelt on topics that are very fruitful of discussion.

A Federalist Who Owns Up

That rising young politician, WINSTON CHURCHILL, of New Hampshire, proclaims himself to be an outright and convinced disciple of ALEXANDER HAMILTON. The *New York Times* of June 9 denotes nearly a page to exposition of Mr. CHURCHILL's political sentiments. "I am a Federalist," he says. "ALEXANDER HAMILTON was the state-man of his age. He discerned the impossibility of recouling the sovereignty of each of a lot of States with the sovereignty of the Union in which they are made one state. The thing is impossible, absurd."

He goes on to say that, as a matter of fact, the States are not sovereign, and though they have preserved too much of the character of sovereignty, the conflicts between their constitutional powers and powers "which belong naturally and necessarily to the nation" have been a constant source of embarrassment, war, and misfortunes as bad as war. To-day Mr. CHURCHILL thinks the conflict worse than ever. He avers that the advance of the country is retarded because forty States meddle in affairs that ought to be handled by the nation alone. The thing is intolerable, he says. We are one great country now; rails and wires pay no attention to State boundaries. Everybody travels; provincialism has gone. Artificial boundaries will and must follow. "They represent no fact. They have become arbitrary and negligible except as they are maintained by the fiction of State sovereignty." Verily, Mr. CHURCHILL has acquired a definite view. He seems to be frankly for wiping the stripes off the flag and merging the stars into one. In scores of States, he says, the Legislatures had better never assemble at all. Necessary local legislation can be had cheaper and quicker than they can do it. Still, he is willing to recognize the existence of what exists. "I am disposed to think," he says, "that the necessary change can be made without interfering with the existence of our present institutions," which means, no doubt, that he would leave the States on the map when he weeds them out of the flag.

How Prevalent Are Such Views?

It is true that the mere fact that Mr. CHURCHILL holds these views does not make them important, for he is not yet an important political influence. But he is a clever man, with signs of light and leading in him, and has done creditable things in New Hampshire. That a person of his intelligence should hold and expound the extreme Federalist views that he professes is of interest. One wonders how far they are shared in these days by persons of more importance than Mr. CHURCHILL, but less ready than he to disclose the state of their minds. If the responsibilities of high office and great influence did not restrain Mr. ROOR, would he be ready to confess himself as thoroughlygoing a Hamiltonian as Mr. CHURCHILL? And President ROOSEVELT—do the States as he sees them "represent no fact"? Have they become to his mind "arbitrary and negligible except as they are maintained by the fiction of State sovereignty"?

Don't Burke the Constitution in the Dark

There is nothing about the Constitution so sacred as to forbid it to be debated and amended. It does not exist by divine right, but is a man-devised scheme of government, adjusted to an existing condition and expressly open to readjustment by prescribed means. We may not find fault with any one for feeling or saying that the Constitution no longer fits the country. If any one wants it changed and State sovereignty deleted from it, it is open to such a person to get the changes made if he can. But we are entitled to demand that if made, they shall be made openly and with due consideration and discussion, and by consent of the parties to the compact. Any other way would be revolutionary. The instrument was devised with profound care. Every change made in it should be made with care equally profound. That it should be buried in the dark won't do. Yet by methods something like that do its critics seem to purpose to smother it.

Japanese Incidents

Mr. DOOLEY is probably right in his conviction that a good many Japanese are easy to provoke; and, it may be added, that the labor-unionists on the Pacific coast are very provoking. Nevertheless, it is certain that there is about as much politics in the attitude of the Japanese who, at home and on the coast, are trying to create trouble, as there is in the attitude of our own politicians who are backing the trouble-makers in San Francisco. It is said that the progressives in Japan are trying to cut Aoki from Washington, and to beat the government at Tokio on the American issue, but perhaps the good sense of the Foreign Minister, HAYASHI, will have more weight with his own people than Mr. ROOSEVELT and Mr. ROOR have yet been able to exert upon the school board and other city authorities of San Francisco. The Hague conference will hope so.

New Light on Canada's Resources

THE June number of the *American Review of Reviews* contains no fewer than four articles which, taken together, present a complete survey of the agricultural, industrial, and commercial capabilities of the Canadian Dominion, from the view-point of the latest statistics. The facts seem to justify the forecast that the development of Canada will constitute the most remarkable economic phenomenon of the twentieth century. Let us glance, for example, at the data concerning the agricultural possibilities of the Northwestern provinces, and the mineral industries of the Dominion.

It is unquestionably true that the great colonizing achievement performed by the United States during the nineteenth century, to wit, the transformation of the West from a savage wilderness to a settled, orderly, prosperous, and populous community, is now being repeated north of the forty-ninth parallel to Canada. As recently as 1805 the Hudson's Bay Company still ruled over a vast empire reaching from Labrador to the Pacific, wherein commerce of all kinds, excepting the fur trade, was nonexistent. A narrow belt of cultivated land along the rivers near Fort Garry failed to feed for the meagre population; the nearest railway was hundreds of miles to the south; and the great fertile plains of the Far West were given up to the Indians, the buffalo, and the fur-traders. Today, after the lapse of only three and a half decades, these vast plains of the Northwest contain nearly a million inhabitants. In five years the population has doubled, and there is no room to doubt that the rate of growth will be maintained for many years to come. The settlement of farming-lands has been followed by a corresponding expansion of towns and cities. Winnipeg, which in 1871 was a little frontier outpost, contains, according to the municipal estimate of 1907, no fewer than 111,000 residents. In four years the annual Dominion revenues from customs, excise, and post-office receipts at this place have increased from \$3,000,000 to \$6,000,000, while the bank clearings have risen from a quarter of a billion to half a billion dollars. Nor is Winnipeg the only considerable city in the prairie provinces. Both Calgary and Edmonton have good ground for looking forward to a population of one hundred thousand apiece in the course of a few years, while Regina (the capital of Saskatchewan), Moose Jaw, Saskatoon, and Brandon are all certain to become large towns within another decade.

Even more eloquent testimony to the progress of the Canadian Northwest is furnished by the growing railway system. By the end of 1878 only sixty-four miles of railway track had been laid in that region. At present, there are in Western Canada no fewer than 4400 miles of track operated by the Canadian Pacific Railway, and 2489 by its rival, the Canadian Northern Railway. The new transcontinental railway now being built by the Canadian government, the Grand Trunk Pacific, will begin to operate sections of its system "in the present season." It is further to be noted that as late as 1870 only 2412 Americans emigrated to Canada. During the ten following years no fewer than 272,000 persons have left the United States to become residents of the Northwest provinces. The spectacle has convinced the inhabitants of Quebec, Ontario, and of the British Isles that if Western Canada is good enough for "Yankees" it is good enough also for them. The result has been a steadily increasing immigration from the British Isles, until the inflow from that quarter now exceeds, by many thousands a year, the arrivals from the United States. The Scandinavian, Teutonic, and Slavic peoples likewise are now strongly represented in Northwestern Canada. In the ten-year period from 1896 to 1906 there were 310,000 immigrants from Great Britain, and 248,000 from non-English-speaking countries, chiefly those belonging to Continental Europe. The significance of the fact that the three provinces, Manitoba, Saskatchewan, and Alberta, have together an area of some 550,000 square miles is scarcely appreciated until we fail to mind that they represent a territory as large as the original thirteen States of the American Union plus the States of Ohio, Indiana, and Illinois. For 846 miles these provinces abut on the American border, and they run thence northward from 300 to 500 miles. Nor is it probable that anywhere on the earth's surface is there a superfluity of equal extent which possesses a higher percentage of tillable soil. Wheat is, of course, the staple product of the Canadian Northwest, and there is no better test of fertility. Reviewing the official returns for the three prairie provinces above named, for eight years (1898-1905), Mr. J. W. Barry, editor of the *Manitoba Free Press*, finds that there was an average yield of 19.73 bushels per acre, which, for land cropped year after year, without any resort to fertilizers, is an unusually high rate. The official average for Minnesota during the last seven years was but 14.2 bushels per acre, and that for Iowa only 14.7 per acre. In 1905 no fewer than 3,449,000 acres in Western Canada were sown to wheat, and the yield was 83,500,000 bushels, an average for that year of over 21 bushels to the acre. The output last year was much larger. To handle this enormous quantity of wheat there are 1015 interior elevators, with a storage capacity of 27,853,000

bushels, and ten terminal elevators, which can hold 18,200,000 bushels. In addition, there are ninety-three three-roller flour-mills able to turn out 18,500 barrels a day. We should add that the yearly output of cattle shows a growth in keeping with the general advance of the country. Last year no fewer than 135,000 head of cattle came into Winnipeg from the Canadian Northwest, of which 85,000 went forward to the British market.

Turning to Canada's mineral industries, we find Mr. F. J. NICOLAR, editor of the publications of the Dominion Geological Survey, computing the quantity of gold which has been taken out of the Canadian Klondike region at \$128,000,000, and the output of silver estimated in 1906 from the Cobalt district alone at \$10,000,000. The production of copper in British Columbia amounted, in 1906, to nearly 40,000,000 pounds, and large deposits of copper have lately been discovered in southern Yukon. Of nickel the Dominion produced, last year, enough to supply practically all the world's requirements of this metal, with the exception of the contribution made by New Caledonia. Mr. D. R. DOWLING, of the Canadian Geological Survey, has computed that from the coal areas already known in Alberta alone there is a possibility of extracting 150,000,000,000 tons, and in Saskatchewan over 20,000,000,000 tons, though most of the latter coal-fields are possibly lignite of an inferior quality. The iron production of Canada is at present far from proportionate to the value of its iron-ore deposits. A quarter of a million tons a year is approximately Canada's average output of iron ore, which seems small indeed, compared with the 44,500,000 tons annually produced in the United States. On the whole, it must be acknowledged that the mineral production of the Canadian Dominion is, for the present, inconsiderable compared with that of the United States or of Australia. But there seems to be no doubt that the extension of railways to coal and iron-bearing areas, it will become a larger factor in the mineral output of the world.

In an article on the relations of Canada and the United States, Mr. P. T. M'GATH is likely to astonish American readers when he points out that Canada's mercantile marine is now the fourth largest in the world, being nearly equal to that of Japan, and greater than the merchant navies of Russia and Spain put together. Scarcely less surprising is the fact that although Canada contains but 6,000,000 inhabitants, she is the third best customer of the United States, being surpassed in this respect by Great Britain and Germany alone. Canadians seem warranted in acclimating their country the richest in the world today, when we keep in view that her foreign trade per head of the population is two and a half times as great as is that of the United States, while she has no war debt, no pension roll, no costly navy, and makes but a small outlay for military purposes. Although she is not engaged in a manufacturing country, yet the output of her factories in 1900 was valued at \$481,000,000, or within \$10,000,000 of the combined value of the agricultural, dairying, mineral, forest, and fishing industries of the Dominion. The worth of the Dominion's fisheries, however, should not be underestimated. In 1906 all the fisheries of the United States, with their 85,000,000 inhabitants, were valued at \$27,727,000, while those of Canada, with only 6,000,000 people, were computed at \$29,479,000—exclusive of Newfoundland, which, with only 230,000 inhabitants, possesses fisheries valued annually at ten millions of dollars.

It will surprise no one that Canada should have at last decided against a policy of reciprocity with the United States, when we note that her foreign trade has grown during the last ten years from \$219,000,000 to \$352,000,000, and is now two and a half times per head that of the great American republic. The expansion of her home market is attested by the statistics of her economic prosperity. Last year her railroads, in which \$1,280,000,000 are invested, carried 20,000,000 passengers and 102,000,000 tons of freight and earned \$106,000,000. The paid-up capital of the banks in the Dominion is \$83,000,000, and the sum of their assets is \$167,000,000. The savings of the people on deposit in chartered banks amounted in the aggregate at the same date to \$85 per head against \$4 in 1875, and the former figure does not include investments in private banks, loan and trust companies, and kindred organizations. In 1905 the revenue of the Dominion was \$71,000,000 for 6,000,000 people; in 1855 the revenue of the United States was but \$65,000,000 for 27,000,000 people. To let her profit should be afforded of the increasingly greater purchasing power of Canada to-day than was possessed by our republic half a century ago. In view of these facts, it is not strange that Canada should face the future with supreme confidence. It remains to add that the opening of the short route to Europe by way of Hudson Bay—a route which will be open for five months in the year, and will shorten the distance between Liverpool and the Western shippers of grain by about 2000 miles—is now definitely assured, no fewer than six railways to Port Churchill, the best of the Hudson Bay harbors, having been already chartered.

The Back Yard in June

THERE is a stately manor-house in Leicestershire, England, whose inmates rejoiced in an American friend who, after fifteen years' residence in England, was still wont to beg, "Do let's have tea in the back yard." And what a back yard it was, with its carefree, luxuriant lawn bordered by a neat gravel walk! Beyond that stretched long beds of graduated hardy flowers. The tall dahlias and hollyhocks at the back, the delphiniums and forget-me-nots and phlox and sweet-williams, the masses of poppies, nemophytes, lilies, and, lower down, nasturtiums and clove-pinks, made a thicket of bloom in front of the mellow garden walls. And the lawn stretched on and on, until it came to a border of hazy willows, holding hands, as they always do in England, and peeping over into a tiny, clear stream with bright pebbles under the water, and beyond that lay meadows and meadows and meadows, in a leisurely, sunniness stretch, under the dim, soft, white, low-hanging, dreamy English skies that drench the landscape in half-water ways of sunlight. It was difficult to look and believe one's self only fifteen minutes from the county's most bustling city.

June is the month when such memories haunt the imagination. Even the tiniest Devon village has its stone and stucco cottages draped in masses of purple climatic; and who that has seen heliotrope growing in a luxuriant vine-twined about white pillars ever forgets the wonder of its color and odor?

Beauty is a matter of age and culture.

"No spring nor summer beauty hath such grace
As I have seen in one autumnal face,"

avies the most daring of poets. Even the sharp, clear atmosphere in our young land makes beauty harder to compare, and yet those of brave spirit will never quite give over the warfare, but will live ever in the fond hope of transforming the real city back yard into an echo of the cottage gardens of Devon, or of little, beautiful, struggling Broadway in Gloucestershire.

To the amateur aspirant of a garden in the back yard the ways are stony, the pitfalls many, and the month of June a season to stay one's heartache with memories. The mass of glory for which one has worked is like to show bare patches, and blossoming has an unlooked-for habit of being very spasmodic. The worst thing that can befall such amateur is to have listened to the advice of the old-fashioned gardener who suggests plants few and far between. Even in the littlest back yard, if one's dream is of a riot and a mass of flowers, it is better to buy one's plants by the half-hundred than by the dozen, and to be wildly extravagant with measure in the autumn and plant-food in the early weeks of spring. If one plants too thickly it is easy enough to weed out and give unnecessary roots to one's neighbor. If one has any sort of a showing, neighbors become envious, and are anxious to try one's plants, so, like the summer vagrant who said he always lent one his cow to his friends for the three summer months, thereby gaining credit as a beneficent person and getting the cow taken care of into the bargain, one's gains are double. But when the June sun lights upon too thickly planted a back yard the ill is irremediable, and one can only hold one's hands and vow to be extravagant ever after. Meanwhile, the clock ticks out the little lives of men, and to have lost the dream of one June is a serious matter; all too serious a matter when one has reached the age when the blossoming of the back yard stands well to the front of one's interest, when the emotional and the ambitious interests are asleep in the dim background of the mind, when the little battles are large, self-important individuals with vital pursuits of their own that shut one out, and when our most vehement demand upon life is that some little measure of placidity and beauty shall edge the path on which we "ebb out with them who homeward go."

To be sure, there are said to be in the world some gardeners who save pot-grown plants for the sake of the grateful amateur, but there is something like accepted defeat in this refuge, and it is wiser to sprinkle penny and scarlet-seed, and do a great deal of extra watering, and push off the barriers of dreamland until September. After all, he who has studied life deeply knows that it is better to look forward than to rest upon achievement. Remove the pricking contrast between what we desire and what we have, and man becomes as incapable of true joy as a potato. The truest joy is to continue working with unmeasurable hope and unmitigated faith.

Perhaps, it cannot be too often reiterated, though to say it began with KOLARZ in Germany long ago, can be never broadcast all over the rose-beds without detriment to the rose-bushes; and they lift such cheery, vivacious little faces on their stiff backbones, and seem so self-confident and pleased with their own beauty, that one wonders how the awkward Germans dared call them "little-stop-mothers." Such a stopmother could not but be an agreeable addition to the most millionaires of families.

Sometimes, too, a wood-hedge is content to being transplanted into a shady corner of the garden, and to heat it up means a jaunt among all the shy dwellers, and there are some to praise and very few to lose. It is a painful thought that the tenderest, the most

fragile and beautiful blossoms blush unseen so far as human eyes go, and one half hopes that there are hierarchies of angels with various tastes and habits, and that out of all of them are so apt is some angel's contemplation, but that some of the lower ones which absent in the middle, playing at hide-and-seek and rejoicing in the columbines and lady-slippers.

There are some things that should be in the back yard for odor's sake, and amongst these should be a honeysuckle vine and a moon-flower. To him that hath an arbor this is easy, and the result picturesque, but to those who are blessed with only a hideous clothes-hanger, it is possible to apply the ribs of a broken umbrella to holding the revelling hanger stationary, and to train up the vines about the middle pole, and then let them throw their tendrils outward over all the ugly wood till one has a quivering, green, and living tall mushroom instead of a lean and hideous disfigurement. Mignonette, clove-pinks, and brims wreath belong to the group one tends for odor, and love-it-and-aid one owns in masses in a corner all for its pretty name. Sweet-hail, if one can find it anywhere in the world still, ought to be in the garden for the love of SHELLEY and KEATS; and one says SHELLEY first adverbially, for the little lyric beginning.

"Madonna, wherefore sendest thou
Sweet-hail and mignonette?"

is more loveliness than all the woes of Isabella and her gruesome plot.

But when all is said and done, these back yards are only good to waken the memories and the heritages of those who keep still in their mind's eye and heart's core the cottage gardens of South Devon or the wonderful gardens of Broadway in Gloucestershire.

Personal and Pertinent

A BRONZE statue of THOMAS FRANCIS BAYARD is to be unveiled at Wilmington on June 22. SUMNER CUSHELY will make the principal address, and Judge GEORGE GRAY will preside. The statue, modelled by Miss KETIE STELLMAN, of London, was given anonymously to a memorial association, which has attended to setting it up at the entrance to Rockford Park.

We quoted last week at some length what the London *Spectator* says of MARK TWAIN, who is over there to receive an honorary degree from the University of Oxford. The *Spectator* begins its eulogy by saying that in bestowing the great American writer Oxford honors herself, and that such a distinction as an honorary degree is offered in hearty recognition of the name, not only of a man of letters, but one who has set an example of upright, brave, and strenuous living. It ends its appreciative article by the assertion that "MARK TWAIN, of American writers, stands for all that Englishmen like best." And yet, notwithstanding the halo and the incense, it is reasonable to expect to welcome back the same simple, philosophic, philosophical, white-elad gentleness who went abroad the other day to accept the proffered kindness of his English kin.

Mrs. CHADWICK, Admiral CHADWICK's wife, is exhibiting in London an invention of which she is the author. This is a device for the carrying of wounded from fields of battle, and while the friends of peace who are now enjoying the remodeling of the Hague tribunal hope that the time is coming when there will be no battle-fields from which it will be necessary to carry the wounded, the time is not yet here. Mrs. CHADWICK is said to have made an admirable instrumentality for the conveyance of stricken men with so much comfort that they can expect to rally after they have been hit by a bullet. The CHADWICKS look have pleasant and useful occupations now that the admiral has retired. Instead of sitting alone the club at Washington with some other shelled sea-dogs, playing whist, growling over the authorities, and objecting to things, he is a park commissioner of Newport, Rhode Island, and is actively engaged in trying to set up there a model municipal government, while Mrs. CHADWICK has been doing something that will relieve the suffering of those who may be unfortunate enough to be the victims of the guns of the admiral's successors in the navy. Mrs. CHADWICK's invention is making as deep an impression on the minds of the peace-lovers, in London, as the admiral, then a commander, used to make in LOVELL's and PHELPS's time on the minds of the English statesmen and warriors. Then he was naval attaché in our London legation, sent abroad to study their new war-ships.

A long line of ancestral antenae has finally resulted in some of the most searching provisions of the Public Utilities Bill. It is well known that one of the most diligent and acute authors of this measure was E. R. WHITNEY, who was an Assistant Attorney-General of the United States with Mr. OLNEY and, afterwards, with Mr. JESSE HARRISON. Had as that law seems to be so many lawyers, it may be assumed that there are precedents that can be cited in such every chance the Whitney drive, so that the ones that will be brought against it must be well prepared if they are to have any chance of success. Mr. WHITNEY has al-

ways had a strong leaning against railroad corporations, and perhaps he inherited the disposition. He harks back to ROSA SNEEDMAN, who didn't like the rule of Great Britain over these colonies, while the side branches of his connections lean much frailer as the SUMMERS, the EVANSONS, and the HARRIS. His father did not engage his mind in the radical policies of the day, but while his relatives were concerned in promoting abolitionism, or escaping from enraged slave-masters at Charleston, or "smoothing through Georgia," he was laying himself at Yale in untangling the relationships existing between the various parts of speech of all known languages. This younger Mr. WHITNEY has always been a Democrat, and was, therefore, a cause of much regret to his relative, Senator HARRIS. He strode into the fight against the surface railroads of New York a number of years ago, and he may be called the father, or the elder brother, of the present wholesale, and very popular, transfer system. He is the lawyer who is at the bottom of the upsetting of the apportionment law, an upsetting that caused such keen distress of mind to the patriot statesman at Albany, who are called the "Old Guard" by the disrespectful. Governor HARRIS has the profoundest confidence in him, and so WHITNEY's radical provisions in the Public Utilities bill seem to the Governor reasonable of defence. WHITNEY's friendships are entirely non-partisan. He has a faith that is beautiful in two Yale men—"BILL" TART and ARTHUR HARRIS; he is a Yale man himself.

In England sons and grandsons have a way of repeating the intellectual achievements of their sires. In the universities and in politics, that we have not yet acquired on this side of the water, although we started pretty fairly with the Adams family. For example, the two ASQUITHs, father and son, have done about the same things, run the same races, and won the same blue ribbons, the son emulating the father about thirty years afterwards. In 1870, Mr. H. H. ASQUITH took a scholarship at Balliol; in 1892, Mr. HENRY ASQUITH the son, won the exhibition at Balliol. The father was first in "mods" in 1872, the son in 1894; the father took the Craven scholarship in 1874, the son in 1898; the father was first in "Greats" in 1874, the son in 1900; the father gained a fellowship of Balliol in 1874, the son a fellowship of All Souls in 1902. The father was president of the Oxford Union in 1874, the son in 1902. It only remains for the son to be Chancellor of the Exchequer about the year 1923. Then we have W. L. G. GLASSBORO, who is the grandson of the W. L. G. M. and who he is now president of the Oxford Union. He is not only the great debater of the Union, as his grandfather was, but he was so at Eton, as was also his grandfather. This is what the *Joia* says of him:

The achievements of his political career did not begin *per se* with them and at the Union. His energy and enthusiasm enlivened the meetings of a house debating society at Eton. His insatiable love of political warfare has carried him to provincial platforms, and to office in the Palmerston and Gladstone Cabinets. Such places, though surely unattractive, are apt to be awe-inspiring; and we sympathize with the rather timid foreigner who was introduced to our host, and hastily stammered out, "Ah, you are an Oxford Attorney!" This accusation is cruel, to say the least of it, for when he is not "addressing the house" Mr. GLASSBORO is as mild as a guinea. He would not be rude or discourteous even to a Congo trader. He would offer him chocolate.

Of course, Mr. GLASSBORO had a grandfather. So had most of us. But our grandfathers were ordinary grandfathers and were low rollers. Thus it came about that our life's business in life was predicated to be shooting, and his recreation politics.

This is the difference between Dr. WILLIAM J. LOUIS's theory of animal development and that of Mr. JOHN BRIDGEMAN, as reported in the New York Times of June 8:

LOUIS has a theory that there is a great deal of individual character among the birds and beasts. He takes great credit to himself for having "discovered" the individuality of the animals. He declares that there are woodpeckers and woodpeckers, lynxes and lynxes, deer and other deer. That is to say, that an old trapper who has seen deer and wolves all his life, and knows their habits far better than LOUIS will know them in a million years—he says that the old fellow will do no such thing, and some another.

This theory I and all naturalists and all hunters and trappers and all woodmen deny utterly and absolutely. We have been observing the wild beasts a great many years; man has been observing them for a good many hundreds of thousands of years, and it has remained for Dr. LOUIS now in the fulness of time to discover that the whole race has been wrong in its immemorial conclusion that the wild beasts behave such in accordance with the instinct, developed through long ages, of its kind.

And the crux of the matter is right there. We can't account at all for the lives and behavior of the beasts without allowing for instinct. LOUIS can't, by enjoining them with reasons, account for all the bestiality of their lives and behaviors. I wonder if he knows anything whatever of the principles of evolution and development—the principles by means of which all men of science now freely admit all living creation has progressed, race and tribe and genus, to the position it at this moment occupies? Does he know

anything of that? Does he know that it has taken ages to develop each instinct—the least, the most minute? Through long centuries of the struggle for existence, each developing breed has learned the things necessary for its survival. The preservative and progressive instincts have been created, of course, through slight, very slight, variations which proved advantageous. You know your DARWIN—everybody knows it but Dr. LOUIS—so I needn't illustrate. The point is that instincts have been a long time in the making, and that departures from them, advances upon them, are rare and exceedingly slight.

Correspondence

DOES COLONEL WATTERSON "GUESS?"

Boston, Gt., May 24, 1907.

To the Editor of Harper's Weekly:

SIR,—In speaking of Colonel Henry Watterson this week you say, "the convention, he guesses, will not want Hughes." Does the Colonel really use Senator Lodge's "strong, terse, English" word, guess? I don't reckon so.

I am, sir, J. L. H.

IMPROVEMENT NEEDED IN TORPEDOES

Brooklyn, N. Y., May 25, 1907.

To the Editor of Harper's Weekly:

SIR,—At the coming peace conference at The Hague, the laws and customs of maritime warfare are to be discussed. I want to ask you if anything has ever been said, in deliberation of this subject, regarding an agreement between the different Powers providing that all torpedoes used at sea should have attached to them some automatic device which, after they had been in the water a certain length of time, would either destroy the explosive or sink the torpedo, so that it would not float about, a constant danger to all shipping.

There is a provision in international law against the use of floating mines in neutral waters, and I cannot see why the same reasoning should not apply to the use of torpedoes, for if they miss their mark and are allowed to drift about, they virtually become floating bombs. The realization of this danger has had a great deal to do with the talk of prohibiting naval operations on the so-called "ocean highways." During the Russo-Japanese war, a number of vessels and junks were destroyed by striking floating explosives that were thought by some to have been torpedoes which had drifted a great distance from the place where they had been discharged. They will also remember the hesitancy on the part of our merchant marine, because of this danger, to navigate Cuban waters directly after the Spanish war. The above instances are insignificant when we consider the extent to which the commerce of Europe would be endangered if a war should occur, such as our between England and Germany. The use of torpedoes would surely play an important part in the naval operations, and undoubtedly a large number of them would be allowed to drift about in the water through which most of the commerce of the world would necessarily pass.

The mechanical construction of such a torpedo, which would sink after it had been in the water a certain length of time, would be very simple. It would be only necessary to place in the shell or hull a plug made of some slowly soluble substance which would dissolve and allow the air-chamber to fill with water, causing the torpedo to sink. The same thing could also be accomplished by a clockwork mechanism that would open a valve after a certain time.

We would like very much to have your opinion of this idea.

I am, sir,

CHARLES HANCOCK.

THE FITNESS OF MR. ROOT

Boston, Ill., May 11, 1907.

To the Editor of Harper's Weekly:

SIR,—I write to congratulate you upon your mention of the fitness of Secretary Root for the Presidency. He is undoubtedly the most able man before the nation to-day, but for that reason, fundamentally, has about as much chance of election as you or I. The Chicago Tribune seemed for a while to be venturing a timorous foot upon this thin ice of Root boom, but even that esteemed contemporary seems now to have crumpled the mantle of silence about it and gone its way. We who have the courage of our conclusions may well say of the Secretary of State that "it is better to be great than to be President."

I am, sir,

RAUF B. MILLER.

THE RESTORED CHURCH AT JAMESTOWN

Boston, Mass., June 4, 1907.

To the Editor of Harper's Weekly:

SIR,—It seems rather curious to me that in the article on Jamestown in the June HARPER no mention was made of the new and beautiful little church which has been built there by the National Society of Colonial Dames of America. E. M. Wheelwright, of Boston, did it and it is a gem. It was presented to the Association for the Preservation of Antiquities in Virginia. I think that the writer had evidently not visited Jamestown Island lately. The church is of brick, and a copy or restoration of the original church, and built on the foundation.

I am, sir,

HOW THE WEST DEALT WITH ONE LABOR UNION

THE "INDUSTRIAL WORKMEN OF THE WORLD," AN OUTLAW LABOR ORGANIZATION IN SOUTHERN NEVADA, TYRANNIZED THE STATE UNTIL THE MINE-OPERATORS AROSE AND CRUSHED IT

By BARTON W. CURRIE

THE trial of William D. Haywood for the murder of former Governor Steiensenberg, of Idaho, has attracted universal attention to labor conditions west of the Rockies. The methods of the Western Federation of Miners in conducting their labor battles with the mine operators of Idaho and Colorado will also be on trial with Haywood, Meyer, and Pettibone, three officers of the Federation.

Of equal interest has been the desperate struggle of the Industrial Workers of the World, an outlaw labor organization, which the mine operators of southern Nevada has struggled with for several years and finally crushed out of existence. Once the dominant labor power in the sage-brush State, this band of "Debs Socialists," as it was colloquially referred to, has been effectively put down; and its lawless attitude in the dark for murder, so do two members of the Nevada outlaw union, while eight of their fellow members are in jail charged with conspiracy to murder.

During the stormiest days of the labor troubles in Idaho and Colorado, when the Western Federation of Miners was embroiled with the mine operators of Colorado and Idaho, the Industrial Workers of the World mushroomed into existence. The I. W. W., as it was popularly known west of the Rockies, was made up of the worst elements among labor agitators. Eugene V. Debs was a sort of godfather to this association of "bad men" and avowed anarchists, and many of the crimes committed by the members of this so-called union were charged to the Western Federation of Miners. This was, however, as much the fault as the misdeeds of the miners' association, as it countenanced the I. W. W., and voted it sympathy in its desperate warfare against the mine operators and every responsible interest in the big mining camps.

In a State where there is no militia and where citizens' committees and hired Pinkerton detectives must serve as police, a band of avowed anarchists of a violent type that for almost two years dominated industrial conditions in a peculiarly wild western fashion, has been disorganized and discredited without thought of Federal interference or request of Presidential proclamation. Facing threats of wholesale murder, riot and dynamiting, and a repetition of Cripple Creek outrages, the better elements of the big mining camps fought grimly throughout the winter of 1906-1907 to down this goddescript union of two thousand men. That they won a dignified and bloodless victory shows that the drastic frontier methods of stored bad lands are no longer necessary. It should also serve as a warning to all labor organizations who allow violent agitators to lead them into the way of things and assassinations.

During the months that the Industrial Workers of the World held tyrannical sway in the booming towns of Tonopah and Goldfield there were many murders, or rather assassinations, that were publicly boasted of as I. W. W. discipline. Men who refused to join or recognize the so-called union were kidnapped from the camps and trucked off to die of starvation and thirst if they were not fortunate enough to stumble upon some trail or spur of railroad track. The sold in towns were shown in organizing to meet the menace of I. W. W. tyranny. They were all the more securely lashed together when they did organize, however, and they never flinched or considered compromise at any

stage of the struggle. The single purpose that called into existence the Mine Operators and Business Men's Protective Organization of Esmeralda County was to destroy the power of the Industrial Workers of the World, and this was accomplished, though it cost the complete paralysis of every local industry for many weeks.

The leaders of the I. W. W. bullied and threatened in vain. One murder was committed in the hope of provoking general disorder and riot, when, it was based, the chief enemies of the union could be slain in the confusion. This crime was dealt with in a rigorous, but dignified manner. The murderer was immediately seized, married to Hawthorne, and lodged in the county jail with more order and decorum than often obtains in kid-gloved communities where there is ample constabulary to enforce the laws. Other I. W. W. agitators, who in their desperate case had planned a wholesale killing, were rounded up by ramp vigilantes and Pinkerton detectives and indicted for conspiracy to murder. They will be prosecuted as vigorously as Idaho hopes to prosecute the officers of the Federation of Miners indicted for committing the brutal slaying of Governor Steiensenberg.

At the time Governor Steiensenberg was made the victim of a bomb exploded by an alleged union assassin, the Western Federation of Miners was affiliated with the then straggling bodies of Debs Socialists, who called themselves variously the Independent Workers of the World, the Industrial Workers of the World, and the Industrial Workers of the World, finally choosing the last title. The choice of "workers" was singularly apt, too, for a large percentage of the I. W. W. members and agitators were not workers, and were indeed "workers" in the sense the word is used in underworld vernacular.

The Industrial Workers of the World were organized by followers of Eugene V. Debs, who worship the red flag as their emblem, and in public meeting spit upon and insult the Stars and Stripes. The I. W. W. was born about the time of the I. O. O. F. outrages, when it gathered in its membership the most violent agitators of the Western Federation of Miners. It established small branches in Colorado when that State was torn by violent mining riots, but it never became a menacing power by itself until it invaded the gold fields of Nevada.

There it rose into prominence by methods that could only obtain in frontier communities of the sort that have festered in the bleak, worthless high altitudes of the Great Basin for the past seven years. The organization grew out of industrial chaos. Such

a condition existed for a considerable period, and the I. W. W. flourished to amazing strength in light of the absolutely unbroken tyranny it exercised in the first flush of its power. The organizers of the so-called union originally called themselves Debs Socialists. In a vague way they possessed the idea that Socialism means that ideal state of society in which the employer of labor becomes labor's slave. Beginning with this paradox and reasoning in intricate circles they set afoot at random the pretense that all labor should be jumbled upon one level, with out any distinction of craft or skill. The common day laborer should take rank with the master craftsman. Lacking skill, more drastic methods should serve—free-lancing by a bandwagon, if necessary. As a matter of fact the industrial

An Example of the "Union's" Methods

THE OFFICE OF THE GOLDFIELD "SUN." THE AUTHOR AND PAUL FOWLER, SUPERINTENDENT OF THE MINEHOLD SERVICE OF THE AMERICAN PAPER CO., PHOTOGRAPHER FOR VISITING THE EDITOR OF THE PAPER, L. C. BRUNSON, AND PHOTO BY BEN J. JONES.

Workers of the World, while calling itself a union, is the avowed enemy of unionism. Its object is to absorb all the unions into a polyglot body of workers. The bartender and the "booster" (the man who tends the free-hatch corner in a saloon) are "workers." In this organization, and so are "stevedores," the riff-raff who sweep out the saloons and gambling-houses in the early morning hours. The locomotive engineer, the electrician, mechanic, or any other skilled artisan is a "worker" and nothing more. In Goldfield, a waiter in a dance hall of the beleaguered searlet type familiar to mining camps was permitted, when chosen walking delegate, to dictate to mine-foremen, plasterers, carpenters, masons, and skilled artificers of various trades how they should conduct themselves in their trade relations with employers. If the employer offend any of the semi-script rules heaped together as "workers" he was disciplined either by boycott or some more drastic measure, such as "being run out of town. Several

men were murdered. Social conditions then were almost primal. Whatever of class there was was subject to revolutionary changes. In a few months penurious adventures became men of wealth and importance. A tramp Indian and the sage-brush wastes located the first big claim, and became rich and famous—for a little while. Then the "wolves" got him and he was devoured. George Wingfield, a boy in years, but many times a man in really wild western experiences, rose from the humble state of farm-dealer to the exalted position of richest man in Nevada in less than five years. Now he is the mining partner of United States Senator George S. Nixon, of Nevada, and fifteen times a millionaire. Also he did heroic service in helping to paralyze the tyranny of the

There were other epic changes in men's fortunes that electrified the far West and furnished the imagination which drew thousands to the desert. There is no need to dwell on the strange mixture of men composing this invading host. The psychology of the treasure-hunter is the same the world over. The worthless drift that in draws along in the wake of the fabled men who make history for the great mining camps and dig treasure for themselves differs not at all wherever the gem or precious metal is torn from its matrix. But Nevada has had the unique experience of a powerful organization of this human betwixt and between.

The strenuously energetic mine operators did not watch this organization grow. It attracted little attention until it had gained such strength that it was able to demolish local industrial conditions. The Western Federation of Miners, an occupied with its own troubles in Idaho, gave it scant regard. That the capture of every trade and employment could lead into a powerful organization seemed ridiculous to the experienced labor organizers until it was an accomplished fact. The Federation of Miners had tolerated the few insignificant branches of the I. W. W. in Idaho, for these red radicals could be made to do their share of the workable result. In the Federation, however, the I. W. W. became strong enough to compel public recognition and not merely sub rose toleration.

Labor of any sort was in such demand in the goldfields that those known to wield a pick was practically as valuable as the highest skill of any craft. Every new arrival who came to seek employment, whether to tend a roulette wheel or boss a gang of miners, was immediately pounced upon by the I. W. W. delegates and caudled. No other qualification was necessary than a small initiation fee. Over this was paid the new member was in good standing. He remained in good standing no matter how he conducted himself subsequently, providing, of course, that he paid his dues. He could be a gambling-house keeper, hawking about the tables and begging from the few lucky players; or he could be the leader before the door of a questionable resort. In the organization's broad theory of equality he was a "worker."

A member of the "union" who is now in jail for murder at Hawthorne told me shortly before the American Federation of Labor went to the maintenance of the Goldfield Property Owners' Protective Association in their effort to crush the power of the I. W. W. that there were in the land of "workers" seventy-two ex-convicts. He seemed proud of the fact; too did not whisper it as a confession. Indeed no. He cried it out with a beautiful flourish of oaths. He was a walking delegation of a certain kind of a stamp-spirit whose stride against law and order were of the frothing character that there

Most created in his most child moments. He had one stereotyped address on what he called the "brutishness of interested interests" which delighted his cable audiences of fellow "workers."

Revolution, terrorism, and assassination (if expedient) is the keynote of the I. W. W. propaganda. The early disciples of this red brand of socialism went forth on the desert and converted; sometimes by the persuasion of lurid eloquence, more often with a bludgeon and a threat of murder. Their dogmas were not hampered by any code of law or ethics. Few of the toilers who journeyed to the camp in the boom days had the courtesy to disregard a request to join the "union." Murders in saloons and dance-hall lounges and assassinations on the lonely trails that thread the waste of sage-brush plains penetrating the camps were common. They were referred to then as J. U. H. discipline.

The officers of the "union" headed that when any "dirty work" had to be done to "correct" or "discourage" those who were feared to become "workers," or who attacked the organization, there would be no dearth of volunteers at the call. Dozens of a familiar type of Western bad men were always ready to respond.

They were called the "herd," and the herd, stories had men whose rough exteriors covered warm, generous hearts; who were even meticulous in their scruples regarding the "square deal" in a gun-fight—always giving the other man a chance to "draw" and then dispatching him "like a grubstake." The I. W. W. had men who were the exact antithesis of this. He had won his "scholarship" in the slungshot and snailshot school. His attacks were only a little more open than the assault of the city snailshot who shot his victim in the

black night-shadows with an ear then as a coyote's for the heavy tread of a policeman.

There are no policemen down there on the desert, only a capricious sheriff rarely seen after midnight in public places, and who visits the scene of tragedy only when a formal request is extended to him. (There have been a few vigorous sheriffs in Esmeralda County, but they expired early in their official careers.) Yes, this organization never lacked volunteers for its "dirty work" and as a consequence the committee of Tonopah and Goldfield were soon effectively cornered. Beginning with a nucleus of a few score agitators the membership of the outlaw union swelled within an astonishingly short space of time to more than two thousand.

For half a century Western mining camps have had to deal with dominating criminal elements. Vigilant committees and law and order leagues have met such situations vigorously; but never in the history of mining or frontier life in this country has the problem of dealing with such a completely organized band of unscrupulous as the Industrial Workers of the World been faced. Idaho has suffered from the thug methods of the Western Federation of Miners, and Colorado mining communities have passed through degrading periods in their labor troubles. The "biggest wreck" was at one time had enough to justify some of the bores of the "puny dreadful." But these were all, to a large extent, sporadic outbreaks. The Western Federation of Miners, whatever its crimes, was a union of a distinct class of workers. They had a common cause and were followers of a single calling.

The I. W. W. was no more representative of any distinct class of workers than a cable. Its members have never had a common cause unless you elect to call their warped and rabid theory of socialism a common cause. The attacks and outrages of these "workers" were never directed against any particular body of men, except indirectly in signaling out the individual who was one of a class not organized or powerful.

If a request to join the "union" was disregarded such neglect was regarded as a challenge. A second request was accompanied by the threat that the town was not large enough to hold the "union" and its enemies. Whatever the tale or calling of the person addressed he could exist in the camp only on the condition that he became a "worker." If he remained stubborn in his refusal to join he would be visited by a committee and acidified that he must leave the camp at a certain hour or be run out of town. There was no appeal from this ultimatum. The organization's enemy was disciplined as house-thieves were disciplined in cattle towns by cowboy vigilantes. He was guilty of the high treason of resistance. Of course there were some stringing-along. There were no trees within fifty or one hundred miles. Being

THE TONOPAH DAILY SUN

COULD YOU COME TO US

A committee of the Goldfield I. W. W. called at The Goldfield Sun office today and notified four employees that they must join the I. W. W. by tomorrow or be run out of town.

The I. W. W. men who made the call are Joe Smith, writing detective for the anarchist; a man named Tom who is a member of the fire department, and another party whose name is not known here. They demanded that every employee join their band of conspirators which flourishes under the name of a union. This demand includes printers and pressmen, who are members of the American Federation is a man.

Now it is up to the dirty scoundrels to start something. The Sun is ready for the scoundrels. Come on, you scoundrels, if you are looking for trouble!

A Blow in the Face that staggered the "Union"

THE UPPER HALF OF THE FIRST PAGE OF THE TONOPAH "DAILY SUN," ANOTHER OF MR. BRANNON'S NEWSPAPERS, FOR AUGUST 31, 1906, FOR WHICH THE "UNION" TRIED TO KILL HIM FROM ARIZONA

"run out of town," however, was little more relished than "stringing up." In fact, many would prefer quick execution by hanging to the slow torture of starvation and thirst in a deserted mining shaft. Nor is there any pleasant prospect in being out adrift on burning sand-paths without food or water many miles from trail or camp. That there were tragic climaxes to these deportations many little heaps of bones on the alkali wastes will testify. No rush was shown unless the victim selected had influential friends. In such cases the "enemy" was driven out on a desolate trail and left to find his way to some other camp or the railroad where he could board a train at a water tank or fuel station. No one about whom a great misdeed might be made was ever slain unless he was a deserter.

This sort of thing went on for months practically unchecked by the better elements in the camps. The mine-owners, the bankers, and salient operators were too busy in their gold-seeking to bother about what did not actually disturb them in their places of business or homes. So long as the crimes were committed at a safe distance the thing committees of the I. W. W. met with what might be construed as implied approval. Small merchants tremblingly implied their efforts to join the union and avoid trouble. Contractors advised the workmen they brought into the desert to join. Miners who drifted in from all over the West were lured into joining, even though they were already members of other unions.

Feeling secure in their dominance of affairs the officers of the I. W. W. announced the plan of organizing all the mining camps of the sage-brush State and of branching out into California, Utah, Arizona, and New Mexico, unopposed, according to their own methods, the best camps from top to bottom, but skipping the towns and cities, where law was strictly enforced and crime painstakingly investigated. Rigorously, however, they could be reached later when the organization became a political power.

But the branching out was delayed. The Dela scheme of pig-bait unionism received a sudden shock that disturbed its foundation and gradually undermined it. One man defied the "union," and, in the phrase of the country, "got away with it." Then he organized its overthrow.

Lindley C. Branson, a young editor, arrived from Nome when the "union" was in the full flower of its dominion, feared and deferred to by all classes, and started two daily newspapers, *The Tonsupah Star* and *The Goldfield Star*. He had successfully edited several mining-camp dailies in Alaska. He is a quiet, forceful young man who does things without any bluster. There are few men to-day who know so thoroughly the psychology of a mining camp.

Several weeks after he began to get out his papers Joseph Smith, the walking delegate of the I. W. W., called on him and told him that his printers, pressmen, devil, and whoever else he employed would have to join the "union." Branson said he would look into it. He did. Smith came back expecting a cringing submission to his "polite command." He was staggered when the editor said to him: "My men will not join the I. W. W. They do not believe in the law, but of socialism and anarchy. Already they are members of the American Federation. I will have something to say about your organization in a few days." The walking delegate returned that requests to join the union were never disobeyed by prudent men. Prudent men were those who wished to remain in the desert and not be hurried there. His storm of threats subsided very suddenly when the young editor drew from his jacket pocket two short-barreled .44's and spread them unostentatiously but significantly on the top of his desk. Exit the walking delegate.

Smith and a committee returned and paid a visit to the composing-room, however. To be sure he first satisfied himself that Branson was out. The workmen were warned that a dreadful fire would be theirs if they did not associate themselves with the I. W. W. But these printers and pressmen had been with Mr. Branson in Nome and Dawson. He was their boss, and if he said "no" it was final. Then the committee warned the men that they would be "run out of town" forthwith. At a meeting that night a gang was selected for the purpose. The ceremony was fixed for the following day. It was postponed owing to an untimely event. The Tonsupah Star, issued that afternoon, contained the following front-page display in the biggest type the little office contained:

COME ON, YOU COWARDLY CURS!

A Committee of the Goldfield I. W. W. Called at the Goldfield

"Sun" Office To-day and Notified Four Employers That They

Must Join the I. W. W. To-morrow or be Run Out of Town

The I. W. W. men who made the call are Joe Smith, walking delegate for the American Federation, a well known firm, who is a member of the Fire Department; and another party whose name is not known here. They demanded that every employer join their band of conspirators which flourishes under the name of a union. These devils include printers and pressmen, who are members of the American Federation.

Now it is up to the dirty scoundrels to start something. The Sun is ready for the scoundrels.

Now use, you cowards and curs, if you are looking for trouble.

This was a blow in the face which staggered the outlaw "union."

It had been accustomed to terrorism, not to be dared. The Goldfield Star appeared in a neat two-page dress. When the papers were printed the scoundrels said they dared not deliver them. Branson and an assistant carried them about the camp and left them with the subscribers, and also sold them in the saloons and gambling-houses frequented by members of the so-called union.

He even went into the headquarters of the I. W. W., which was thronged with the men who had volunteered to run him and his employees out of town and scattered about his papers. Not a hand was raised against the singularly quiet young man. The "workers" were little less paralyzed for the effect of his visit. In fact the entire camp stood aghast at the boldness of the boyish-looking man with the cold gray eye and firm lip-bow.

He had calculated exactly on the effect of his move, however, and relied on the cowardice of mine-owners and merchants. They told him that the union had organized every element in the camp, desirable and undesirable; that it was all-powerful and would certainly crush him. He did not think so. Incendiaries and anarchists of their stamp, he knew, were all rewards at heart. Their socialist propaganda, he wrote in capitalized editorials, was a specious fabric of pure rant; meaningless, incoherent, beguiling from no logical premise and ending in confusion. He began a splendidly fearless campaign that he waged through many strenuous months. He spent the eyes of the two big camps to the sort of incident that he induced him to induce him to induce him to electrified both communities and gave heroic color to the cause he made against the "union." There were plenty of men in both Tonsupah and Goldfield as fearless as he. When he was beset by the I. W. W. and threatened with death they rallied to him.

The organization had power enough then to persuade every merchant, tradesman, broker, salaried, and even many mine-operators to refuse any advertisements in his papers. Even the newspapers, messenger boys, bank clerks, brokers, clerks, shop clerks, domestic help, young and old of every employment, were members of the I. W. W. Then, it was commonly said that they became members through "the fear of God" established by the "union." The miners were in the same plight, though they feebly proclaimed that they held a union of their own distinct from the I. W. W. and a local of the Western Federation of Miners.

Then "fear of God" Branson paved a miserable superstition that flourished sturdily when a man of initiative and uncommon pluck challenged it. He demonstrated that the bad men and desperate characters of the "union" were his enemies, and he branded them in his headlines as "Curs," "Scoundrels," "Asses," "Cheap Skates," "Law-broke Things," "Cowards," and "Sneaking Murderers." That he bound men with the courage to set the type was considered as remarkable as his own defiance from.

When it came to the disclosing of a man who could shoot with both hands without taking them out of his pockets or apparently moving a muscle the I. W. W. leaders were revealed in their true light. One attempt was made to kill him and only one. He sought out the man who had shot at him from behind a shed and made him go down on his knees to him in front of the I. W. W. headquarters and beg for mercy. Dozens of "workers" looked on in silent silence.

A notice was posted on the bulletin board of the I. W. W. that any person who visited or spoke to editor Branson was "unfair," and should be run out of town. When the writer and Paul Cowles, superintendent of the Western service of the Associated Press, visited the Goldfield Star office they were photographed by a union photographer, and the photograph was posted on the bulletin board beneath the notice that "they should be run out of town." It required some argument before the officers of the union would take the photograph down.

By this time Branson had the backing of such noted gun fighters as George Wingfield and Diamond-fred Jack Davis. These two millionaire mine-owners had volunteered their services as his newspapers. They distributed his boycotted papers in a spectacular fashion, spitting them on the long barrels of .44-caliber revolvers and taking them from the shooter's hand to hand to purchasers. No "workers" had the tendency to disturb these proceedings.

Then Branson, Wingfield, Davis, and United States Senator George B. Nixon organized their protective association and declared a counter-boycott upon the boycotting union. The hundreds of miners who had been lured into joining the outlaw union were notified that the union would therefore be closed to I. W. W. men. When the miners refused to do this the mines were closed, and finally they were starved out of the Dela organization.

Leaders of the American Federation of Labor were brought in the camp, who, under the protection of the Miners' Union and the Nevada Miners' Protective Association, organized the separate trade-out of the I. W. W. until at last there were no "workers" left who had any distinctive calling recognized by the American Federation.

Through all these months the entire communities of Tonsupah and Goldfield were under arms. The atmosphere fairly thrived with desperate rumor and murderous threat, but only one man was killed—Joseph Smith, a restaurant-keeper, who refused employment to I. W. W. men, and who barred his restaurant to "workers." M. R. Preston, the "worker" who murdered him was not lynched or shot-up. The camps were manned with Pinkerton detectives who kept him swiftly and quietly to Hawthorne, where he was held secretly in the county jail. No demonstration of any sort was made to free him, for the I. W. W. treasury was empty and he was a new John Law of the desert who is no kin to Judge Lynch, but a wheelman, civilized, law-abiding citizen.

JAPAN UNFURLING HER FLAG ON THE PACIFIC

THE FORMIDABLE MERCHANT FLEET WHOSE ORGANIZATION MARKS THE INITIAL STEP IN THE JAPANESE PROGRAMME OF NATIONAL ADVANCEMENT

By ADACHI KINOSUKE

JAPAN will soon control the trade of the Pacific. Her merchant fleet is growing with great rapidity, not only in American traffic but in the commerce of Korea, Formosa, China, India, and the Far East generally. Certain American optimists declare that the Pacific will always be dominated by the United States. But it is only the optimists who have this faith. Shipping men, American men actually engaged in commerce with the Far East, know that Japan is fast assuming command in that quarter of the globe.

If any one doubts the accuracy of this proposition, let me ask him to consider the organization of the Nippon Kisen Kaisha (Japan Steamship Company), which is energetically carrying the Sunrise flag half-way round the world.

A group of the most noted bankers and steamship men of Nippon met on the second day of February of this year in the Imperial Assembly Hall in Tokyo. This was the first public meeting of the promoters of a new steamship company. At this meeting it was christened the Nippon Kisen Kaisha. A large name. Yet the company has the conviction of knowing that amid the cheerful summer growth of steamship enterprises since the war it is bigger than its name.

The company commands the capital—no watered stock, by your leave—an instantly available capital of thirty million yen (15,000,000 dollars gold). Their financial programme sets aside ten million yen for the purchase of about one hundred vessels of 200,000 tons, which are, at this present moment, actually engaged in shipping business under the merchant flag of Nippon. The remainder of the sum, the twenty million yen, is to be spent on the construction of new ships. They will have a fleet of vessels of great speed and other qualifications that would please the subsidy regulations of the country. This sum is also meant to cover the expenditure of establishing new lines of traffic.

From a copy of the company's financial estimate which is before us—a modern business plan, framed by scientific experts, and perhaps quite as true as any of the old-fashioned estimates—we learn that the company expects an income of more than five million eight hundred and twenty thousand yen annually from freight handled by regular and established lines of the company; 1,584,307 yen from the freight carried by their vessels on irregular and special services; 213,211 yen and 25 sen from subsidies and bounties; and 100,000 yen through miscellaneous sources. The total expected income per annum amounts to 8,107,825 yen. Against this the total expenditure of the company is estimated at 4,614,265 yen and seven sen.

You must admit that the showing is not at all bad. The estimate was drawn up by a very cautious set of people who have more than once before drawn up estimates; who have never disappointed their friends, especially in their predictions—not the worst showing, to say the least, for an enterprise which is as far from a get-rich-quick trap of this money-mad age as is the north pole from the equator.

The service of the company is divided into two kinds—the regular and the special. Its specialties are freight. The following are the regular lines: Kobe—Osaka via the Pacific; Kobe—Osaka via the Nippon Sea; Kobe—Korea ports; Yokohama—Formosa ports; Kobe—Vladivostok; Kobe—North China ports; Kobe—Yantai ports; Kobe—Tientsin (Tientsin); Yokohama—North China ports; Kobe—Hongkong; Kobe—Vladivostok; Hongkong—Salomon; Kobe—Hawanan ports; Kobe—Java; Kobe—South American ports; Kobe—Indian ports; Hongkong—Hawanan ports; Kobe—Christmas Island ports; Kobe—North American ports; Tientsin—Vladivostok; Tientsin—Shanghai; Tientsin—Hongkong; Tientsin—Singapore. The four closing lines issuing out of Tientsin (Tientsin) are meant specially to operate in connection with the South-Manchurian Railway. They would make a special bid for the transportation of the coal output of the Manchurian mines, which will, doubtless, be very actively worked by the new management of the South-Manchurian Railway.

Now that we have stated the funds at the command of the company, the extent of their routes, let us see what are the special and peculiar advantages this company enjoys.

1. We have already said how very securely this new company is to steer away from the competition in passenger traffic. Freight is its specialty. It must have strong vessels; but there is no need to expend a large amount of funds on the fittings and decorative features of its vessels, no small item of expense in the construction and maintenance of passenger ships. The company's schedule does not call for fast ships, as in a passenger line, and here again is a great gain in economy.

2. In spite of the comparatively small investment—that is, compared to the establishment and maintenance of the passenger service—there will be no difference in the amount of subsidy they

are to receive from the government. This naturally makes for a larger net profit than a passenger service.

3. A large portion of the first hundred vessels which this new company is to purchase comes from old established lines. The established business of the old lines is to fall—according to the terms of purchase—into the hands of the Nippon Kisen Kaisha. As a matter of fact, at the first conception of the new company, the idea of Mr. Nishikawa, the originator of the plan, who will be the active manager of the new company, was to form a sort of shipping trust of all the smaller companies outside the big three—the Nippon Yusen, the Osaka Kisen, the Teito Kisen. But that raised the new company can carry on business from the very first day of its establishment; there is no need for it to waste time in arranging for a thousand and one details in the selection of routes, in opening branch offices, in the creation of new business, and so on.

4. The amount of funds at the command of the company is sufficiently large for it to handle the transportation of great staples, such as rice, kerosene, coal, timber, sugar, also bulky freight such as fertilizer and minerals. Thus the company can outbid its competitors.

5. To-day Nippon imports kerosene, timber, and wheat flour from America in no small quantity, carried chiefly in foreign bottoms. From South-Pacific ports we get a good deal of fertilizer; cotton from India, sugar from Hawaii; from Malaya a large amount of rice. There is no reason why some, indeed a large portion, of these cargoes should not fall into the hands of the new company. Here is a field, a large field, white with the harvest. The company need not spend any of its energy in creating a field of oilseed and usefulness; it can devote all its efforts in getting the business.

6. As you see, then, there seems to be no lack of work for the new company from the very first day of its existence. But after all, the future of the company is not to be measured by its golden kingdom. It comes in time to cover the highways of just that portion of the globe in which will centre the commercial activities of the world before long. It can, if only the Nippon Kisen Kaisha shall prove its worth, carry food and reinment to and from 500,000,000 people of the Asian continent. From year to year, very likely, more and more people will pass into and from Asia. But the movement of people cannot be compared, in magnitude and scope, to the movement of goods both raw and manufactured to and from the Far East.

There was when a river course was a factory of empires. We have left the potanic age so far behind that we hardly remember anything about it; and in a similar manner we have gone beyond the age when the sea was a great empire-builder, and then the ocean. Now we are entering upon a rather complex era in which the railways and steamships are the great builders of empires. The Far East, like some portions of the Americas, is still in its constructive period. They who can give a people raw material to work upon, and when it is done can take its handiwork to the markets of the world, they who can take away the things of which people have too much, and bring back to them, in exchange, the things of which they have too little—they are the real architects of earth, as, indeed, they always have been.

They need not make eloquent speeches; they need not give political diatribes; need not seek themselves in secret velvet, neither in silver nor gold; they need not be anything but black, unguine ships and dusty railway trains, and their thrones are proof against all the fiftieth whims of fickle politics; people must have them, that is all.

7. But the greatest of all the advantages of the new steamship company is to be found in two gentlemen who are to be the brains of the concern. One of them is Uchida Kakichi, the present head of the Mercantile Marine Bureau, who is to be the president; the other is Nishikawa Sen, who has served the government through the Russian war as the superintendent-general of all our transport service. The story of these two men is largely the history of the development of marine transportation in Nippon waters. Mr. Uchida is of Tokyo University. Since he left it in 1891 he has been in the employ of the Mercantile Marine Bureau. He has advanced himself from the humblest position to the head of the bureau. He speaks but little; has little time for words. Thinking and talking don't go well together with some people.

Mr. Nishikawa is to be the general manager of the company. Born in the first year of Meiji (1868) he is hardly forty years old, and is certainly in the May-day of his life. Like Mr. Uchida, since he left school in 1887 Mr. Nishikawa has devoted himself completely to the study and practical workings of marine transportation. In 1890, these days of political turmoil, when the younger genera-

JAMES MONTGOMERY FLAGG

WHAT ARE TEACHERS?

ARE THEY MERE WAGE-EARNERS, ENTITLED TO NO MORE THAN THEIR MARKET VALUE?

ARE THEY EDUCATORS, ENTITLED TO PAY BASED ON THE VALUE OF THEIR SERVICES?

BY AN ONLOOKER.

THERE is a movement throughout the country to increase the salaries of our school women engaged in teaching in schools and colleges. This movement is due to a variety of causes. It is due, in some measure, no doubt, to the desire on the part of those engaged in teaching to share in the general "prosperity" we hear so much about; it may be partly a response to the feeling of diminished income aroused by a general increase in the cost of living; and it may be due, to a certain extent, to a growing appreciation by the general public of the value of the work of the profession and of the requirements of a life of dignity compatible with the responsibility and the status of those engaged in the work.

Concurrent with this demand that those devoted to educational work shall receive a higher rate of compensation, there has developed another movement which, for the time being, threatens entirely to obscure the first, that is, the "feminist" demand that women teachers be paid at the same rate as men. The demand, "Equal pay for equal work," is not confined to teachers, nor to any section of the country; but the active campaign made for the principle by the women teachers of New York City has brought the whole question to the front more prominently than ever before. Irrespective of the settlement of this particular question by the State Legislature, the issue is one of fundamental importance for the whole people, and is bound sooner or later to call forth intense feeling and bitter controversy in all parts of the country—namely, in all parts of the civilized world.

The situation in New York is typical, in that the city and State are sufficiently large and sufficiently developed economically to have all possible views of the subject represented in the persons of its various interested men and women. It may not, therefore, be unprofitable to glance at some of these conflicting views from the standpoint of economic theory.

Freedom from local and technical details, the controversy rests essentially on a few basic issues, and it presents the interesting paradox that both parties to the controversy use arguments which, if consistently followed to their logical conclusions, lead to exactly the same point, and this a point which very few indeed of the teachers concerned would accept as sound doctrine. But perhaps one has no right to expect more consistency or more logic from teachers than from any other body of men. Since the issue is a general one, reduced to its lowest terms, is the proposition made by some of the organizations of women teachers in the public schools that all teachers should receive "equal pay for equal work" without regard to sex?

There are really three parties to the controversy: (1) the party of those in favor of the general principle of equalization of salaries, which includes practically all the women teachers; (2) the party of those opposed to the principle, which includes most of the male teachers; and (3) the party of the "general public," which includes the "taxpayers" and the "innocent onlookers." There is no unity in the attitude of the third party, and it need not, therefore, be considered as a whole; but one portion of this third party, the Board of Education, deserves some attention.

As an abstract proposition of justice or equity, nothing can be said against the principle of equal pay for equal work. Women have to pay for car-fares and for postage-stamps and for the other good things of life exactly the same prices as are paid by men. Conversely, when a man buys an apple or a newspaper at a stand, he pays the same price whether he is a woman or a man; and when he buys a cake, he does not get it cheaper because it was written by a woman. The men reply to this, not that the principle is in itself unfair, but, first, that it is contrary to the practice of the past and of the present; and, second, that there are very good reasons why men should receive higher pay. Some men have so far forgotten themselves as to pretend that women's work never is equal to that of men; but that is clearly a begging of the question, even if it be untrue, and so this argument need not be counted at all.

As to the statement that "women never have received the same pay as men for doing the same work," it may be true enough, but it is surely no argument. If the principle is just, the sooner it is put into practice the better. That particular objection is the objection of the reactionary, or at least of the obstructionist; progress is possible only if, and only to the extent that, we are prepared to do what never has been done before; and teachers, of all persons, should be in a receptive attitude toward the new. The real significance of the employment of this argument is that it discloses the male theory of the relation of the State as employer and the teachers as employees. There are four possible theories of this relation to be considered. The first one is: *The teachers get their jobs and their pay from the State; it behooves each teacher to get as much as he can out of his job. It is to be feared that this theory is held by a few teachers, but probably not by any considerable number. It would at any rate be deemed by all thoughtful persons as quite unworthy of teachers, however it may be with other public employees, and for the present purpose it may be ignored.* A second possible theory of the relation is this: *The State is engaged in a certain enterprise, which is analogous to any com-*

mercial or industrial enterprise; it needs the services of many men and women to carry out the purpose of the enterprise; the State hires men and women who are available for the work and pays for the services the lowest cash price at which the services can be purchased in the market. This seems to be the theory of those who oppose equalization of salaries because of its novelty, or because of its "economic heresy."

It is a well-known fact that on account of certain social and economic conditions, the services of women (and children) can generally be obtained at a much lower cost than the like services of men; for the State or city to pay the women the same salaries as are paid to the men would be "economically unsound." That is to say, some of the teachers would then be paid more than it would be necessary to pay to secure others to do the same work. It is not good business sense to pay for labor or materials more than things are worth. It is not good business sense to pay more than one wants; and if it is not good business sense, then of course it is not right for the city or State to do it.

The women's reply to all this is not that it is good business sense for the employer to pay them the same salaries as he pays to the men; their reply is based upon the acceptance of a different theory of the relation between the State and the teachers. This third theory may be stated as follows: *The State is engaged in a very serious undertaking, namely, the education of its future citizens; this enterprise is conducted not for profit in the commercial or industrial sense, but for certain high social ends, and it must therefore not be conducted on a commercial basis; the State must therefore pay for the services which it accords in carrying out its undertaking, not the commercial rule of compensation—which is a rule that allows the employer to derive a profit from the surplus value of the services of his employees, but the rule of compensation based on the value of the services rendered; and more especially, it must pay like compensation for like services, without discrimination as to color, sex, or any other irrelevant differences.*

Under this theory of the State's undertaking, in making there is of course no room for the employer's conclusions. But one point is their argument requires further elucidation, and that point is the question of the measure of the value of services: what constitutes "equal work" and what is a fair compensation for the services of women? Since the women are paid in accord with the law of supply and demand, it may be fair to ask, whether they know of any other mechanism for determining prices. It is obvious to every observer that prices and wages have absolutely no constant relation to the "real value" of commodities and services. Prices and wages are currently determined only by the interaction of supplies and demands, and these have no fixed relation to worth. To make compensation of services proportionate to the value of the service would necessitate the discovery and application of some standard for measuring services that is commensurate with the measure of compensation. Clearly, market prices and dollars and cents furnish no such standards; their use leads inevitably to the injustices complained of by the men teachers, as well as by the women teachers. The only standard yet discovered that gives any promise of usefulness in this connection is the commodity known as human life. It is possible to measure approximately the value of goods and services in terms of human life if they have any value at all; and it is likewise possible to estimate compensations in terms of human life. But it must be admitted that the women teachers, in making this claim, are not applying the day affairs, and its use, moreover, implies rather doubtful doctrine. It implies, for one thing, that human life devoted to human service earns a compensation equivalent to dignified human living—living worthy of devoted human beings. According to this latter theory, then, the women teachers, and the "equalizers" generally, claim that every human being that devotes his or her services to the betterment of human wellbeing is entitled by virtue of this devotion to a human living and nothing less—whether it be male or female, whether it be black or white, whether the services take the form of rearing infants or of bearing infants, whether the life be devoted to the healing of the sick or to the shooting of "coons." But surely our enlightened women teachers cannot accept that conclusion, for that leads farther than they would be willing to go. Would they be willing to say, for instance, that every human worker is entitled to a complete human living—and accept all that that implies?

How fares it, in the mean time, with the men teachers? Not only, as has been said, is the principle of equal pay contrary to the economic law of supply and demand, and to the economic usage of civilized people, but the claim of the women leaves out of consideration the important economic fact that man is traditionally the provider, that is to say, that member of society that generally has dependent upon the returns for his exertions one or more persons besides himself. Besides himself, he claims, ignores the fact that the normal state of the normal adult male in a civilized community is the married state and that this means at least two persons living on the income of one teacher. And since, say the men, women teachers do not generally have others dependent upon their incomes, and since, moreover, women do not, as a rule,

devote themselves to the teaching profession with a view to remaining in it permanently, it is only fair that those members of the profession who do their duty by society by bringing up a family should be adequately rewarded by being paid a larger salary than is paid to those others.

Now, whether it be true or not that most women teachers do not have others dependent upon them (and that most men teachers have), and whether it be true or not that women enter the profession with at least one eye open for a chance to marry out of it (while the men come in in stay), this claim of the men is clear and distinct: "Although I do no more work than those other teachers (the women), I should get more pay because I have a wife and some offspring to support, which those others have not." Now this "because," although in fact it explains the reason for the general difference between the wages of men and those of women, is not in itself a moral sanction for the difference. This because becomes, when used as a justification of differences in pay for equal work, the expression of a fourth theory of the relation between the State and the teachers, which may be stated thus: *The State engages in a certain important enterprise, namely, the education of its future citizens; to carry out the purposes of this enterprise it has need of the services of certain trained men and women; in order to obtain the services of these people it is necessary to exempt them from the need of engaging in industrial or commercial pursuits; and the way thus to exempt them is to maintain them, and those dependent upon them, at the public cost, in order that they may be free to devote themselves to this important public work.*

The implication of this theory, whether the men teachers have consciously formulated it or not, is quite in harmony with their contention. According to this theory, and according to the logical outcome of the men's claims for higher pay, a man with six children dependent upon him should receive a larger subsidy or maintenance fee than the other man (or woman) with only one person to look after—and that without regard to the time spent in preparation or to the quality of work, provided of course that the work is in all cases satisfactory, that is to say, above a certain minimum standard. But to what does all this lead but to the doctrine: "To each according to his needs!" And will the men accept that?

Through the smoke (or rather the dust) and confusion of the agitation emerges at this juncture the untruffled and dignified figure of the Business Man, in the guise of a "Commissioner of Education." To him the women's talk about equal pay for equal work is sentimental moonshine, and of course he is not going to yield to it. To him the arguments of the men are not only too academic, but quite beside the mark.

He can see no reason why the employee, man or woman, old or young, married or single, trained or untrained, should be paid one cent more than that sum for which you can get him, or a substitute, to work for. He need not pay more in his private business, and so he need not do it, he thinks, in the city's business.

The outcome of the workings of this theory is rather hard to predict. Its rigid application might lead to some disagreeable results. It might lead, for instance, to a condition of affairs in which teachers, in common with other wage-earners, would be forced to choose between a catch-as-catch-can scramble for office and preferment, and a union of forces for the advancement of their interests. In the former case we should have the edifying spectacle of the educators of our youth engaged in a tooth-and-nail struggle to keep the wolf from the door, of the men and women entreated with the task of making men and women of our children playing the roles of subsidized trucklers, and lick-spittles, and cowardly beggars. In the other event, we should have the equally edifying spectacle of the leaders of men, our trainers for social efficiency and high thinking, forced to pursue the destructive tactics of the trades-unions, fed up, that is, to fight the State whose future citizens have been entrusted to their molding.

When it comes to paying higher salaries, the taxpayers' representatives can gibber tell the teachers that if they don't like the conditions they don't need to stay. But if, after a thorough deliberation, the teachers should decide that they did not like the conditions, and all agreed to step out on the same day, what consternation, what a wailing, what a gnashing of teeth there would be! Mercenaries! Traitors! Contract-breakers! Time-server! Greedy men and women, unworthy to be Teachers, for Teachers should be devoted to their work and not think of money!

It is a difficult problem to solve. But if we do not solve it now, we shall have to later; and the longer we wait the harder will be the task.

THE CRITIC

MAM' LINDA*

A Novel

BY WILL N. HARBEN

ILLUSTRATED BY F. B. MASTERS

CHAPTER XIX

BLACKBURN followed with a rattle, indicating the best ventilated spot for its placement. Thither Carson led his still bemused client, who at his bidding moved like a jeky automaton.

"You won't be afraid to stay here, will you, Pete?" he asked the perturbed and puzzled negro.

Pete stared round him at the encroaching shadows in bewilderment.

"You gwine ter look me in, Marso (Carson)?" he asked.

Carson explained that in a crisis he was still a prisoner, but a prisoner in the hands of friends—friends who had pledged themselves to see that justice was done him. The negro slowly lowered himself to the mattress, and stretched out his legs on the stone pavement. An utter drop of despair seemed to settle on him. From the depth of his wide-open eyes came a stare of dejection complete.

"Den I hain't free?" he said.

"No, not wholly, Pete," Carson returned.

"Dry up down thar! listen!" It was Baker's voice in a guarded tone from the cellar doorway.

The group around the negro held its breath. The grinding of footsteps on the floor over their heads died out. Then from the outside came the steady tramp of many feet, the clatter of horses' hoofs.

"Sh! Blow out the light," Carson said, and Blackburn extinguished it.

Profound darkness and stillness filled the long room. Like an army, still and voiceless, the human current flowed onward. It must have numbered several hundred, judged from the time it took to pass. The sound was dying out in the distance, when Carson and his friends crept from the cellar, closed and locked the door and joined the others in the darkness above.

"That mob would hang every man of us if they caught on to our trick," said Baker, with a queer satisfied chuckle.

Carson moved past him towards the front door.

"Where you gots?" Baker asked.

"I want to see how the lead lies on the outside," said Carson.

"You are a crazy fool if you do," said Blackburn, and the others pressed round Dwight and anxiously joined in the protest.

"No, I must go," Dwight firmly persisted. "We ought to know exactly what they think to-night, so we'll know what to depend on. If they think he was lynched they will go home satisfied; if not, as Pete says, they may suspect us, and the most godless riot that ever swept the country may take place here in this town."

"He's right," declared the mountaineer. "Somebody ought to go. I think I'm really the man by rights, an—"

"No, I want to satisfy myself," said Dwight. "Stay here till I come back."

Blackburn accompanied him to the front door, cautiously looked out, and then let him pass through. "Knock when you get back—no, here, take the key to the back door and let yourself in. So far, so good, my boy; but this is absolutely the most ticklish job we ever tackled."

There was a swelling murmuring, like the onward sweep of a storm, from the direction of the court-house. Voices growing louder and increasing in volume reached their ears.

"Wait for me; keep the lights out, for all you do," Dwight said, and away he sped in the darkness.

As the gloom and stillness the others waited his return, hardly daring to raise their voices above a whisper. He was gone nearly an hour, and then they heard the key in the lock, and presently he stood in their midst.

"They've dispersed," he said, in a tone of intense fatigue. "They lay it to the Hillside faction, who had some disagreement with the main body to-day. They are satisfied."

"Gentlemen," it was Garner's voice from his chair at the table. "There's one thing that must be regarded as absolutely sacred by us to-night, and that is the secrecy of this thing."

"Good Lord! you don't think any of us would be fool enough to talk about it?" exclaimed Blackburn, in an almost startled tone over the bare suggestion. "If I thought there was a man here who would mention this to a living soul, I'd—"

"Well, I only wanted to impress that on you all," said Garner. "To all intents and purposes we are lawbreakers, and I'm a member of the Georgia bar. Where are you going, Carson?"

* Begun in HARBEN'S WEEKLY, Vol. LI, No. 2699.

"Down to speak to Pete," answered Dwight. "I want to try to pacify him."

When he came back, a moment later, he said: "I've promised to stay here till daylight. Nothing else will satisfy him; he's broken up to pieces, crying like a nervous woman. As soon as I agreed to stay he quieted down."

"Well, I'll stay here with you," said Keith. "I can sleep like a top on one of the counters."

"Hold on, there is something else," Carson said, as they were moving to the rear door. "You know the news will go out in the morning that Pete was taken off somewhere and actually lynched. This will be a terrible blow to his parents, and I want permission from you all to let those two, at least, know that—"

"No!" Garner cried, firmly, even fiercely, as he turned and struck the counter near him with his open hand. "There you go with your sentiment! I tell you this is a grave happening to-night. Grave for us, and still graver for Pete. Once let that mob find out that they were tricked, and they will hang our man or burn this town to the ground."

"I know that well enough," admitted Dwight, "but the Lord knows we could trust his own flesh and blood when they have so much at stake."

"I am not willing to risk it," said Garner, crisply, glancing round at the others for their sanction. "It is an awful thing for them to hear, but they'd better stand it for a few days than to spoil the whole thing. A negro is a negro, and if Lewis and Linda knew the truth they would be shouting instead of weeping, and the rest of the negroes would suspect the truth."

"That's a fact," Blackburn put in, reluctantly. "Negroes are quick to get at the bottom of things, and with so dead a body in sight to substantiate a lynching story they will smell a mouse, and hunt for it till they find it. No, Carson, real weeping, right now, will help us out more than anything else. No, the old folks will have to grin and bear it; they will be all the happier later."

"I suppose you are right," Dwight gave in. "but it's tough."

It was just at the break of day the following morning. Major Warren, who had not retired until late the night before in his perturbed state of mind over the calamity which hovered in the air, was sleeping lightly, when he was awakened by the almost noiseless presence of some one in his room. Sitting up in bed he stared through the half-darkness at a form which towered straight and still between him and the open window, through which the first touches of a new day were stealing.

"Who's there?" he demanded, sharply.

"It's me, Marso William—Lewis."

"Oh, you!" The Major put his feet down to the rug at the side of his bed, still not fully awake. "Well, is it time to get up? Is anything—wrong? Oh, I remember now—Pete!"

A groan from the great chest of the negro set the air to vibrating, but he said nothing, and the old gentleman saw his head nodding in assent.

"Oh, Lewis, I hope—" Major Warren paused, unable to continue, so vast and gruesome were the fears his servant's attitude had inspired. The old negro took a step or two forward, and then said:

"Oh, master, dey done took 'im out las' night—dey track my 'n' boy—" A great sob rose in old Lewis's breast and burst on his lips.

"Really, you don't mean it—you can't, after—"

"Vassey, vassey, he said, master, Pete done gone now, Oh, God, dey killed 'im hard right, Marso William."

"But—but how do you know?"

"I des dis minute seed Jake Tobbins; he slipped up ter my house en called me out. Jake gives karb 'ind de jail, en when de mob come him on his wile head de mobster en slipped out in de co'n-patch ter hide. He seed de guard, master, wid his own eyes, en heard um ax ter de boy. At dis time Marso Barret refused ter give 'im up, but dey ordered fire on 'im en he let um have de keys. Jake seed um fetch Pete out en heard 'im beggin' ter ter spaz' his life, but dey ding 'im up."

There was silence, broken only by the old negro's sobs and the smothered effort he was making to restrain his emotion.

"And Blumny," the Major began, presently, "has she heard?"

"No, jist, master; but she was awake—she been awake all night long—en her knees pravin' seed er de time fer mercy. She was awake when Jake come on she knowed I went out ter speak ter 'im, en when I come back in de house, master, she went in de kitchen. I know what she done dat fur—she didn't want

ter know, sth, of I'd heard bad news or not. I waited ter let 'er move, but I was afraid ter tell 'er en come away. I loves my wife, mister. I—I loves her mo' nose dat Pete's gone dan ever before. I loves 'er mo' since she been had ter suffer dis way; en, mister, dis gwine ter kill 'er. It gwine ter kill Linda, Marse William."

"What's the matter, father?" It was Helen Warren's voice. And with a look of growing terror on her face she stood peering through the open doorway. The Major ejaculated a hurried and broken explanation, and with little intermittent gasps of horror the young lady advanced to the old negro.

"Does Mammy know?" she asked, her face ghastly and set in supernatural rigidity.

"Not yet, Missy, not yet—it gwine ter kill yo' of mammy, child."

"Yes, it may," Helen said, a strange quality of resignation in her voice. "I suppose I'd better try to break it to her. Father, Pete was innocent, absolutely innocent, Carson Wright assured me of it. He was innocent, and yet—"

She turned back into her room across the hall. The sound of the match she struck to light her lamp was heard. Without another word Lewis crept down the stairs and out into the pale light of early morning. Like an old tree deeply beaten by storm he leaned towards the earth. He looked about him almost for a moment and then sat down on the edge of the veranda floor and covered his head to his known, sinewy hands.

A few minutes later, just as the red sun was rising in a clear sky and turning the night's moisture into dazzling goss on the grass and leaves of trees and shrubbery, like the benevolent smile of God upon a pleasing world, Helen descended the stairs. She had the sweet, pale face of a suffering nun as she passed, looked down on the old servant, and caught his siccous and yet grateful upturned glance.

"I'm going to her now, Uncle Lewis," she said. "I want to be the first to tell her."

"Yes, you mus' be de one," Lewis sighed, as he rose stiffly, "you be only one."

He shuffled along in her wake, his old hand grasped in his tense hand. As they drew near the little sagging gate of the cottage there was a sound of moving feet within, and Linda stood in the doorway shading her eyes from the rays of the sun with her fat hand. To the end of her life, Helen had the memory of the old woman's face stamped on her brain. It was a yellow mask, which might have belonged to the dead as well as the living, behind which the lights of hope and despair were vying with each other for supremacy. In nothing pertaining to the situation did she play so pitifully as in the fact that Linda was deliberately playing a part, grimly acting out conduct that would fit itself to what the agony of her soul was pleading for. She was trying to smile away the shadows her inward fears, her racial intuition, were resting on her face.

"Mighty early for you ter come, honey," she said, "but I reckon you is worried 'bout yo' of mammy."

"Yes, it's early for me to be up," Helen said, avoiding the warring glance that seemed in reality to be scolding the revelation of hers. "But I see Uncle Lewis, and thought I'd come back with him."

"You hain't had yo' breakfast yet, honey. I know," said Linda, reaching for a chair half-brutally and placing it for her

young mistress. And then her eyes fell on her husband's hunched, bowed attitude as he stood at the gate, and something like it, through her sense of sight, gave her a great shuddering blow. For an instant she almost reeled; she drew a deep breath, a breath that swelled out her great motherly bosom, then with her hands hanging limply at her side she stood in front of Helen. For a moment she did not speak, and then with her face on fire, her great somnolent eyes ablaze, she suddenly put her hands on Helen's knees and said:

"Looky here, honey, I've been afraid of it all night long, an' I've fit it off an' fit it off, an' I got up dis mornin' lightin' it off; but of you come here so early 'er seem if you know ter tell me dat my child—of you come here—of you come here—Gin't tied on High, it ain't no! It can't be dat way. Look me in de eyes, honey, I'm raly de whinin' fer you ter give it de lie."

For one moment she glared at Helen as the girl sat white and quivering, her glance on the floor; and then she uttered a piercing scream, like that of a dying beast, and grasping the hand of her husband, who was now by her side, she pointed a finger of stone at Helen. "Look! Look, Lewis! My Gawd, she nist lookin' at me! Look at me, honey, child, look at me! If you hear me say—" She stood firmly for an instant, and then she reeled into her husband's arms.

"She said, 'What I tol' you, Missy? Yo' of mammy said.' And lifting her in his arms he bore her to the bed in the corner of the room. "Yes, she done said," he groaned, as he straightened up.

"No, she's only fainted," said Helen. "Bring me the camphor, quick!"

CHAPTER XX

That morning at the usual hour the stockkeepers opened their dingy houses in the main street and placed along the narrow brick sidewalks the dusty, stock-worn samples of their wares. The clerks and porters as they swept the doors would pause to discuss the happenings of the night just gone. Old

Uncle Lewis and Aunt Linda Warren's boy had been summarily dealt with, that was all. The longer word just used had of late years become a part of the unvarnished vocabulary, suggesting to crude minds many meanings not thought of by lexicographers, not the least of which was something pertaining to juster far-reaching, grim, and relentless. Only a few of the more analytical and philosophical ventured to ask themselves if, after all, the boy might have been innocent. If they put the question to the average citizen it was tossed off with a shrug and a "Well, what's the difference? It's such talk as he was guilty of that is at the bottom of all the black crimes throughout the South. Nork upon an Pete's was the very muscle of the black class that were everywhere, reaching out for helpless white throats. Dead? Yes, he was dead. What of it? How else was the black, constantly increasing torrent to be dammed?

And yet by ten o'clock that morning even these tongues were silenced, for news strange and startling began to steal in from the mountains. The party who had been in pursuit of the desperado Sam Dallow had overtaken him—found him hiding in a barn covered with hay. He was unarmed and made no resistance, laughing as if the whole thing were a joke. He frankly told them

Drawn by F. B. Martin

"I want to be the first to tell her"

that he would have given himself up earlier, but he wanted to live long enough to get even with the other leader of the mob that had whipped him at Darby, a certain Dan Willis. He confessed in detail exactly how he had murdered the Johnsons, and he had done it alone. Pete Warren was in no way implicated in it. The lynchers threatened him; they tortured him; they tied him to a tree and piled pile upon pile of brush and sticks on the trunk from him, and when they had successfully rid him with bullets just as his clothing was igniting, they left him hanging by the roadside, a gruesome scarecrow, a warning to his kind, and, led by Jake Parsons, they made all haste to wreck the faction on Pete Warren's track to tell them that which he was innocent.

Jake Parsons, carrying a load on his mind, remembering his wife's valiant stand in behalf of the younger accused, rode faster than his tired fellows, and near his own farm met the lynchers returning from Darby. "Too late," they told him—in response to his new—the Hillbend boys had done away with the Darby jailbird, and mysteriously hidden the body to inspire fear among the negroes.

At Darby consternation swept the place as story after story of Aunt Linda's prostration passed from house to house. "Poor, faithful old woman! Poor old Uncle Lewis!" was heard on every side.

About half past ten o'clock Helen, accompanied by Sanders, came down-town. At the door of Carson's office they parted and Helen came in. Carson happened to be alone. He rose suddenly from his seat and came towards her, checked by the sight of her wan face and dejected mien.

"Why, Helen!" he cried, and then checked himself, as he hastened to get a chair for her.

"I've just left Mammy," she began in a voice that was hazy with emotion. "Oh, Carson, you can't imagine it! It is simply unutterable, awful! She is lying there at death's door staring out at the ceiling, simply benumbed."

Carson sat down at his desk and leaned his head on his hand. Could he keep back the truth under such pressure? It was at this juncture that Garner came in. Casting a hurried glance at the two and seeing Helen's grief-stricken attitude, he simply bowed.

"Excuse me, Miss Helen, just a moment," he said. "Carson, I left a paper for your pigeonhole," and as he bent and extracted a blank envelope from the desk, he whispered: "Remember! Not one word of this. Don't forget the agreement. Not a soul outside of that group is to know." And putting the envelope in his pocket, he went out of the room, casting back from the threshold a warning, almost threatening glance.

"I've been with her since sunrise," Helen went on. "She fainted when she pressed the object of my early visit, and when she came to—oh, Carson, you love her as I do, and it would have broken your heart to hear her. Oh, such pitiful wailing and begging God to get her out of pain!"

"Awful, awful!" Dwight said, "but, Helen," again he checked himself. Before his mind's eye rose the faithful group of friends who had stood by him the night before. He had pledged himself to them to keep the matter secret, and so matter what his own faith in Helen was, he had no right, even under stress of her grief, to betray what had occurred. No, he couldn't tell her.

"I was there when Uncle Lewis came in to tell her that proof had come of Pete's absolute innocence," Helen went on, "but instead of comforting her it seemed to drive her the more frantic. She—but I can't describe it. I won't try. You will be glad to know, Carson, that the only thing in the shape of comfort she has had were your brave efforts in his behalf. Over and over she called your name. Carson, she used to pray to me; she never mentions his name now. You, and you alone, represent all that is good and self-sacrificing to her in existence. She sent me to you."

"She did?" Carson was avoiding her eyes, fearful that she might read in his own a hint of the burning thing he was trying to withhold.

"Yes. You see, the report has reached her about what the lynchers said in regard to hiding Pete's body. You know how superstitious the negroes are, and she is simply crazy to recover the remains. She wants to bury her boy, Carson, and she refuses to believe that some one can find him and bring him home. She seems to think you can."

"She wants to see him. I won't see further."

"If it is possible, Carson. The whole thing is so awful that it has driven me nearly insane. You will know, perhaps, if anything can be done, but, of course, if it is wholly out of the question—"

"Helen," in his desperation he had formulated a plan. "There is something that you might know. You have more right to know it than any one alive, and yet I'm bound in honor not to impart it to any one. Last night," he went on, modestly, "in the hope of formulating some plan to avert the coming trouble, I asked Keith to get some of my best friends together. We met at Blackburn's store. No positive vows were made. It was only the sacred understanding between men that the matter was to be held inviolate, owing to the personal interests of every man who had committed himself. You see, they came at my suggestion, as friends of mine true as I am, and it seems to me that even here I'd have a moral right to take another into the body—another whom I trust as thoroughly and wholly as any one of them. Do you understand, Helen?"

"No, I'm in the dark, Carson," she said, with a feeble smile. "You see, I want to speak freely to you," he continued. "I want to tell you something you ought to know, and yet I am not free to do so unless—unless you will tacitly join us. Helen, are you willing to become one of us in spirit?"

"I am willing to do anything you'd advise, Carson," the girl replied, groping for his possible meaning through the cloud of

mystery his queer words had thrown around him. "If something took place that I ought to know, and you are willing to confide it to me, I assure you I can be trusted. I'd die rather than betray it."

"Then I'll tell you," Carson said, impressively. "Helen, Pete is not dead."

"Not dead?" She stared at him incredulously from her great beautiful eyes. Slowly her white hand went out till it rested on him and remained there quivering.

"No, he's alive and in self-keeping; free from harm at present, anyway."

Helen's fingers tightened on his hand, her sweet, appealing face drew nearer to his; she took a deep breath. "Oh, Carson, don't say that unless you are quite sure."

"I am absolutely sure," he said; and then, as they sat, her hand lingering unconsciously on his, he explained it all, leaving the part he had taken out of the recital as much as possible, and giving the chief credit to his supporters. She sat spellbound, her sympathetic soul melting and flowing into the warm current of his while he talked as, it seemed to her, no human being had ever talked before.

When he had concluded, she drew away her hand and sat erect.

"Oh, Carson," she cried, "I never was so happy in my life. It actually pains me—she pressed her hand on her breast. "Mammy will be so—but you say she must not—"

"That's the trouble," Dwight said, regretfully. "I'm sure I could put her and Lewis on their feet so that they would not let the truth be known, but Blackburn and Garner—in fact, all the rest—are afraid to risk them just now, anyway. You see, Linda and Lewis might betray it in their emotions—their very happiness, and that might undo everything we have accomplished."

"Surely more than the report of Sam Dablow's confession has gone out, they would let Pete alone," Helen said.

"I wouldn't like to risk it," said Dwight. "Right now, while they are under the impression that an innocent negro has been lynched, they seem inclined to quiet down; but once let the news go out that a few towns men had used the galvano, and they would rise more furious than ever. No, we must be careful. And, Helen, you must remember your promise. Don't let even your sympathy for Linda draw it out of you."

"I can keep it, and I see I must," Helen said. "But you must release me as soon as you possibly can, Carson."

"I'll do that," he promised, as she rose to go.

"I'll keep it," she repeated, when she had reached the door; "but to do so I'll have to stay away from Mammy. The sight of her agony would wring it from me."

"Then don't go near her till I see you," he cautioned her. "I'll see all the others to-day, and put the matter before them. Perhaps they will now relent on that point."

CHAPTER XXI

STANDING with bowed head at the front gate when Helen arrived home she saw old Uncle Lewis, his bald pate here to the shining.

"Linda ain't her boy, Missy," he said, pitifully. "She say she went down-town to see Marce Carson, ra she seem mighty nigh crazy ter know eb you found whar de body er de po' boy is at. But all she's beggin' in pleadin' ter see, Missy, er de dm white men refuse it de Lawd only know wat she gwine ter do."

Helen gazed at him helplessly. Her whole young being was wrung with the desire to comfort him with the truth, and yet how could she tell him what had been revealed to her in such strict confidence?

"I'll go see Mammy now," she said. "I've no news yet. Uncle Lewis—no news that I can give you. I'm looking for Carson to come soon."

As she neared the cottage the motley group of negroes, serious-faced men and women, bald-eyed persons in their teens, and half- clad children under the door intuitively and respectfully drew aside, and she entered the cottage unaccompanied and unannounced. Linda was not in the sitting-room where she expected to find her, and so, wondering, Helen turned into the kitchen adjoining. Here the general aspect of things added to her growing sorrow. For the old woman had drawn the curtains of the little, small-paneled window close, and before a small fire in the chimney she sat prone on the ash-covered hearth. That alone might not have been so surprising, but Linda had covered her body with a number of old sacks, upon which she had plentifully sprinkled ashes. The grayish powder was in her short hair, on her face and bare arms and filled her lap. There was one thing in the world that the old woman prized above all else—a big leather-bound family Bible which she had owned since she first learned to read under the instruction of Helen's mother, and this also, ash-covered, lay by her side.

"Is I gwine ter bury my child?" she demanded. "What young master say? Is I, or is I never ter lay eyes on 'im again. Is I de only bigger mother dat ever lived on dis yeth, bound er free, dat can't have dat much? Tell me. Ef dey gwine ter le me see 'im Marce Carson, I'd know it. What he say?"

Embered almost speechless by the prostration she was in, Helen could only stand staring helplessly. Presently, however, she bent, and lifting the Bible from the floor she laid it on the table. With her massive elbows on her knees, her fat hands over her face and almost touching the flames, Linda rocked back and forth.

"Der ain't no God," she cried. "Ef dey is one He's as black as de back er dat chimney. Dat book is er lie. Dey ain't no love er mercy anywhars dis side de blinkin' grinnin' stars. Don't tell me er nigga's prayers is answered. Didn't I pray las' night

till my tongue was
swelled in my mouf
fer um ter spair my
boy? En what en de
name er all created
was de anner? Whea
de day brack wid de
same sun, shile' dail
was ahinkin' when he
laid de fua time on
my breast, de news
was fetch me dat
my baby chile was
dragged out wid er
ripe roust kins neck,
prayin' ter men whist
I was prayin' ter him.
Look lak dat er-
nough, hein? But an-
nex, come do some
dat ef he'd lived one
short hour longer dey
might er let 'im go
'cu' se dey foun' de
right one. Look lak
dat er enough, I ex-
hein? But nex come
de word, ea de las'
mess-age. Innocent er
no, right one er wrong
one, he wasn't goid'
ter have a common
hurlyin' place — not
evva in de putter's
bird dis book tell er
bout so big. Don't
talk ter me. Ef
prayers fun niggers
is answered, mine was
heard in hell en Old
Scratch en all his
imps er darkness was
managin' it. Don't
come near me. I
might lay han' on
you, I ain't myself. I
heard er lowtrash
white man say once
dat niggers was too
belovins. I may be er
wild one, but all I
know. Oh, honey,
don't pay no 'tention
ter me. Ye' of
mammy is bein' burnt
at de stake en she
ain't 'sponsible. She
love you, honey—she
love you in 'er
trouble."

"I know, Mammy,"
and Heba put her
arms around the old
woman's neck. A
great, almost over-
powering impulse had
risen in her to tell
the old sufferer the truth, but thinking that some of the negroes
might be listening, and remembering her promise, she restrained
herself.

"I'm going to write a note to Carson to come up at once," she
said. "He'll have something to tell you, Mammy."

And passing the negroes about the door, she went to the house,
and hastening into the library, she wrote and forwarded by Uncle
Lewis the following note:

"DEAR CARSON,—Come at once, and come prepared to tell her.
I can't stand it any longer. Do, do come. HELEN."

CHAPTER XXII

HALF AN HOUR later Helen, waiting at the front gate, saw a
horse and buggy turn the corner down the street. She recognized it
as belonging to Keith Gordon. Indeed, Keith was driving, and
with him was Carson Dwight.

Helen's heart bounded; a vast weight of insupportable respon-
sibility lifted itself from her. She unlatched the gate and swung
it open.

"Oh, I thought you'd never come," she said, eagerly, as he
sprang out and advanced to her. "I would have broken my oath
of allegiance to the clan if you had waited a moment longer."

"I might have known you couldn't keep it," Dwight laughed.
"Mam' Linda would have drawn it out of you, just as you did out
of me. I couldn't stand to see you taking it so hard."

"But are you going to tell her?" Helen asked, just as Keith,
who had stepped aside to listen to his horse, came up.

"Yes," Carson answered. "Keith and I made a lightning trip
around and persuaded all the others. Invariably they would shake
their heads, and then we'd simply tell them you wished it and
they would give in."

Drawn by F. B. Sturges

Unable to utter a word, he grasped the young man's hand

checks. "It would be just my luck right now to have this
thing turn smack dab against me. We are in the
woods yet, Heba, by long odds. The rage of that mob is only
sleeping, and I have enough enemies, political and otherwise, to
sit it to last but at a moment's notice if they once got an inkling
of the truth." He snapped his fingers. "I wouldn't give that for
Pete's life. They discovered our trick. Pale stalks and
come in town when Keith and I left. He said the hillbred peo-
ple were earnestly denying all knowledge of any lynching, or of
the whereabouts of Pete's body, and that some people were already
asking queer questions. So, you see, if on top of that growing
suspicion old Lewis and Linda begin to dance a hoe-down of joy,
instead of weeping and wailing—well, you see, that's the way it
stands."

"Oh, then perhaps we'd better not tell them, after all," Helen
sighed. "They are suffering awfully, but they would rather do
that than to be the cause of Pete's death."

"No," Carson smiled; "from the way you wrote, I know you
have had about as much as you can bear, and we simply must try
to make them understand the gravity of the matter."

At this juncture Keith came up, panting from his run, and
joined them. "Great heavens!" he cried, lifting his hands, and
the palms outward. "I never saw such a sight. I can stand some
things, but I'm not equal to that."

"Are they coming?" Carson asked.

"Yes; there's Lewis now. Of course I couldn't give them a hint
of the truth down there in that swarm of negroes around them,
and so my message that you wanted to see them here only seemed
to keep them up higher."

"Yes," Carson answered. "Keith and I, but in hand, his black face set
in stony rigidity, had paused near by and stood waiting respectfully
to be spoken to."

(Continued on page 921.)

"But say, Miss
Heba," Keith said,
gravely, "we really
must guard against
Lewis and Linda's
giving it away. It
is a most serious
business and our
own interests aside—
the boy's life depends
on it."

"Well, we must get
them away from the
cottage," said Helen.
"It is literally sur-
rounded by negroes."

"Can't we have
them up here in the
parlor?" Carson asked.
"Your father is
down-town, for we
saw him."

"Yes, that's a good
idea," Helen respon-
ded, eagerly. "The
servants are all at
Mammy's; we'll make
them stay there and
have Lewis and Mam'
Linda here."

"Suppose I run
down and give the
message," proposed
Keith, and he was off
with the speed of a
ball-player on a home
run.

"Do you think
there is any real
danger in letting
Linda know it sud-
denly?" Carson asked,
thoughtfully.

"We must try to
approach it gradu-
ally," Helen said,
after reflecting for a
moment. "There's no
trilling. They say a
great joy often kills
as quickly as great
sorrow. Oh, Carson,
don't let glorious to be
able to do this! Don't
you feel happy in the
consciousness that it
was your great sym-
pathetic heart that
inspired this miracle,
your wonderful brain
and energy and courage
that put it
through?"

"Not through yet,"
he laughed, deprecia-
tingly, as his honest
blood flowed into his

A SHINING BOOK*

By A. T. QUILLER-COUCH

LET me allow all possible dissent of the delight and admiration that stay by me as I close this volume, as I shut the covers upon this shining story. It is true that for months I have eschewed novels, and so came to find no doubt with a freshened appetite. It is equally true that, by the same mysterious law which has made so many friends for me out of Sweden, a genuine descendant of the line of Izaak and Meir, Dr. J. M. Brown and J. M. Barrie, has only to whisper and I come to him. Those storm-bitten burghs of which they write are as absolutely strange to me in fact as they are dear to me in imagination; there they belong with Athens and Rome, the Sicily of Theocritus, the Hagadah of the Arabian Nights. They are classical ground. The humors of them lie closer to my understanding than do those of any known or invented town in the middle or north of England. With the goods of the world these are actually as unfamiliar as with the book of the wild geese crying over the roads in Mr. Neil Munro's story: yet they know it as surely as those eyes know the Copenhagen of Hans Christian Andersen.

Nay, though the knowledge be all derived from books, imaginings, dreams, so intimately I seem to have it that I dare to doct with confidence a sham *Monde Wesak*, a sham *Wandae in Thessae*, and be angry as with profanation. Justly or unjustly—but I think justly—the later Kailyards are accountable to me: they vulgarize sacred ground; their death-lands are solemn, and their Babylons I cannot away with.

But this book is of totally different quality, of the right breed and tradition: native as pest, but also touched with that genius which makes all countries one; and again differentiated as pure Scots by that strain of sentiment of which we Southerners fight shy. We are wise, perhaps. Your literature has purchased its sentiment at a fearful price—an expense of spirit in a waste of ship; but when one comes upon a book like this of Mr. Munro's, with its confident delicate handling, he has to admit that the cost has been justified.

Is the story a true one? In a sense it is not true; for it deals only with the sunny side of life, with gentle characters, and with a slight story which it leads, through no difficulties, to a triumphantly happy ending. Save for Captain Consequence in lightly sketched character, soon laid aside, as the tale and the author's mood have no use for him, or no heart to treat him as he deserves) all the personages are lovable, down to the dog—the admirable dog—Foolies. Real life is not all compact of such lovable folk; nor, unless I mistake, is Mr. Munro himself under any such illusion. He writes of the sunny side deliberately, with selection, because he wants to present that side and has a conviction that it will be good for us. So indeed it is; but he does not exult in conviction as would a man who wears of the sunny side simply because he could see no other. The fiction is not of that surprise kind which, peering into the dark shadows of our nature, and daring all depth, lifts our humanity and shows it divine. It passes over all misapprehensions, all discouragements, in Rud Thre's progress to artistic excellence and fame; and we know that excellence and fame may be obtained without these. Mr. Munro knew it too, though he presents the fairy side of the story.

And the fairy side, after all, is true as it is unashamedly beautiful. Such men and women as Daniel Wyre and his sisters do exist in this world and sweeten life; children of genius like our heroine are born and, under such loving influences, must attain. It is good to be reminded of what the best might be; far better than to be reminded of the bits, the hindrances, the pitfalls, that will come without invention. If this were an impossible story, I should not be found praising it; but it is possible; and, if it happened, this earth would be the glad place it might be and ought to be.

I have laughed over this book, for it is packed with delicate wit and absurdity. I have felt my eyes moisten, here and there, for its joyousness plays over depths of simple emotion, common to all honest folk who love children and are the child inevitably, earnestly themselves aiding in proportion to their love, slipping away into a future they cannot share. Tender voices vainly failing upon childhood to finger—hands eagerly, fearfully, promising the fate their selfishness would delay—household love calling back to protection while the young heart, half regretful, half impatient, braces and strains towards the future—this, the commonest tragedy of good lives, underlies the smiling comedy of Mr. Munro's happy book. We have it summed up for us in the picture of the two good aunts working furiously to prepare their darling's outfit for school—the task of love which, in all it does for the youth it cherishes, must ever be digging a grave for its own delight. And I have called it a shining book because, shutting its covers, I have felt like one pulling down the curtain on a play which—besides introducing me to real friends—has quickened life with a homely half-forgotten meaning. I think of Turner's remark upon the critic who objected that he had never seen such sunsets. "Ah! but don't you jolly well wish you could?" Ourselves have seen even such skies as Mr. Munro paints, or guessed them, and should be happy of the reminder.

I do not dwell the plot, for there is no particular plot; and I say little of the characters, because to report of them at second hand would be vain and would moreover defeat the desire with which I write: that your readers learn to possess themselves of this book, which I have called a shining book, and to make friends with *Lawyer Wyre* and his two sisters, with the maid from *Colonsay* and her lover, with *Foolies* and above all with *Rud*—the incomparable.

Yes, it is a shining book; ending in a note of success, but teaching the heartiness by the way, full of the laughter of simple hearts; a book like a morning-moon filled with sunshine and Uncle Dan's philosophy, which says:

"The first half-hour in the morning is worth three hours at any other time of the day; for when you've said your prayers, and had a good bath, and a clean shave, and your boots new on—no slippers nor silly dressy dressing-gowns—the peace of God, and—and—the assurance of strength and righteousness depends upon you so that you—you—you can tackle without."

It deserves to be a little classic, this story so full of good writing, and smiles, and right feeling.

* Ed. By Neil Munro, New York: Harper & Brothers.

JAPAN UNFURLING HER FLAG ON THE PACIFIC

(Continued from page 512.)

tion of Nippon seemed to have heated wine instead of decent human blood in their veins. Mr. Nishikawa saved himself from the political maelstrom into whose vortex his comrades were hurling themselves with so much enthusiasm, and found himself in Hongkong. The coal which he saw on the market there came from Australia. He could not find a trace of Nippon coal.

It took something like four weeks, the way the coal was transported in those days, to bring it from Australia. He knew that it would be a matter of but few days to get Nippon coal to Hongkong. And that first dream of his wrote for him the genesis of his practical career. He was the first to introduce Kyushu coal into the Hongkong market; soon he became an owner of ships. The opening of the Russian war called him to an important post; the transport service was entrusted to his hands; the stomachs of men and horses of our Manchurian army largely depended upon the judgment of this one man. He stood between the government and the ship-owners and satisfied them both. That is as singular as a miracle, but he did it. It speaks well for not only the executive ability of the superintendent-general of transports, but for the high quality of his diplomatic talent. Such, then, are the guiding hands of the company.

I have told the story of the birth of the steamship company. Is that all that you have read? The mere story of a new steamship company as such ought to be found among the high-priced pages of advertising. It is the story of the first actual and very great step which Nippon has taken in the serious war for the command of the Pacific. That is the thing which I have tried to tell. And if we have followed a steamship company in the making it is because that first step was taken in the capital city of Tokyo.

The gentleman who invited his friends to meet him at the Bankers' Assembly Hall bears a familiar name. He is by far the ablest financier in the Far East. Being the most powerful banker of Nippon, he is also the master magician, the workings of whose wand have brought forth the industrial Nippon of to-day. Permit me to introduce him to you—Baron Shibusawa. If one wished to tell the people of Nippon of the stability and the future prosperity and success of any new industrial enterprise, one certainly would say that Baron Shibusawa is one of the directors of the new company. After that it is not needful to add another enthusiastic

adjective or statistical figure. Seeing the name of Baron Shibusawa, therefore, the people did not trouble themselves in the least as to the greatness of the company, as to its success. They did not say, "How on earth can this new company stand up against the Nippon Yusen, the Osaka Kisen, and the Toyo Kisen, the three greatest established steamship lines in the Far East?" What they really said was this: "Is it going to fight against them all? There will be busy days for some people."

Always careless, the people did not take enough time and pains to see many peculiar things about this new company, and especially about the chief promoters of it. Not the least among them are Mr. Kondo, president of the Nippon Yusen Kaisha, Mr. Ohashi, president of the Osaka Shosen Kaisha, and Mr. Nani, president of the Toyo Kisen Kaisha. And as all the world knows, and if it doesn't, it ought to, Baron Shibusawa is and has been ever since his very inception the most powerful shareholder and director of the Nippon Yusen Kaisha.

All this throws a side-light, a beautiful light, to my way of thinking, upon what manner of men is the business world of the New Nippon. Trick, unscrupulous, narrow—and you know well how many another secret compliment has been heaped so generously by the innumerable friends of the West upon the silent heads of our business men. No matter. The children of Nippon enjoy many a happy hour at the expense of a certain Mr. Frog, who lives at the bottom of a deep well, and declares—and who shall call him a liar?—that the heavens are nothing but a round blue hole about four feet in diameter; that there is no sun in the sky, but instead a few pin-point stars twinkling both day and night. In all this Mr. Frog states a fact as he sees it. Some of us have lived long, but this is the first time that we came to learn that a foolish fable out of a Nippon nursery can preach to the wisdom of enlightened merchants of the West. But I digress. The men who are back of this new company are big enough to be the promoters of a rival company.

Such, then, is the fourth candidate which Nippon is putting forth for the winning of the trophy—the mastery of the Pacific. What, pray, is America doing? Flustering? Yes; we all know about that. But what else? All sorts of hostile legislation to make the merchant flag of the United States a curio rare enough for the Smithsonian Institute.

HONORING THE MEMORY OF TWO NOTABLE AMERICANS

To a Modern Warrior

DANIEL C. FRUNCH'S STATUE TO MAJOR-GENERAL HENRY W. LAWTON UNVEILED AT BIRMINGHAM, IN MEMORIAL DAY, BY MISS LAWTON GENERAL LAWTON FELL IN BATTLE AT SAN MATEO, CALIFORNIA IN 1896

To the Designer of the Brooklyn Bridge

THE STATUE SHOWN IN THE PHOTOGRAPH IS TO BE ERECTED IN TRENTON, NEXT AUTUMN, TO THE MEMORY OF JOHN A. ROEBLING, THE DESIGNER OF THE BROOKLYN BRIDGE. THE SCULPTOR IS WILLIAM CUTLER

SINCE its organization about 32 years ago, The Prudential Insurance Company of America has paid out for death claims, etc., over \$124,500,000. By itself, this statement is really monstrous, but when it is known that over \$5,000,000 of this total was a voluntary gift to the Company's industrial policy-holders, it becomes a matter of extraordinary interest.

This, however, is precisely what it was. It has always been the policy of the Company to let policy-holders share its prosperity; and to this end the Company has made a number of valuable concessions to the insured.

One of the concessions by which the amount of the death benefit on industrial policies was increased amounted to over \$1,000,000. Another granting industrial policy-holders paid-up insurance has cost almost \$2,000,000. A third granting uncontracted-for dividends on industrial policies has meant an expenditure of nearly \$1,500,000. Other concessions have been granted from time to time.

But the one recently put forth is perhaps the most important of the lot. The Company has announced that all industrial policy-holders who have attained age 75, or who will attain that age during 1907, will then have to pay no further premiums.

This will relieve policy-holders of premium paying at a time when, because of advanced age and probable decreased earning power, the payment of premiums may have become a burden.

It has been estimated that if the plan is continued for 10 years it will cost the Company over \$3,250,000.

In addition to being insured in a financially imprudent Company, The Prudential policy-holder has the satisfaction of knowing that every advantage and concession that the Company can properly advance is given him.

A Club Cocktail

IS A BOTTLED DELIGHT

THOUSANDS have discarded the idea of making their own cocktails,—all will agree giving the CLUB COCKTAILS a fair trial. Scientifically blended from the choicest old liquors and mellowed with age make them the perfect cocktails that they are. Seven kinds, most popular of which are Martini (Gin base), Manhattan (Whiskey base).

The following label appears on every bottle:

Guaranteed under the National Pure Food and Drugs Act. Approved June 30th, 1906. Serial No. 1707.

Lackawanna
Railroad

Where to Spend
This Summer

The Lackawanna Railroad's booklet, "Mountain and Lake Resorts," will tell you how you can go, where you can stay, what you can see, and how much it will cost. 144 pages, profusely illustrated. In addition it contains a clever little love story entitled:

"A Chase for an Heiress"

It will be sent for 10 cents in stamps. Address: GEO. A. CULLEN, General Passenger Agent 26 Exchange Place (Dept. S), New York City

The Welcome

Come in, Dear friend, and welcome be,
Make glad this house prepared for thee—
This plain abode, this simple shrine,
This unfrequented heart of mine.
Here thou mayst rest, when weariness
Overtakes thy soul; when cares oppress,
And hope is faint within thy heart
Here thou mayst bide awhile, apart
From all that breaks the harmony
Of perfect life; here sheltered be,
When night and storm enshroud the skies,
If thou wouldst fain avert thine eyes
From all the puppets that must play
Their part in every human day.
This be the silent chamber, where
The fragrant incense of the prayer
May rise to bless and sanctify
The room that thou dost occupy.
Come in, Dear friend, I welcome thee:
Long may thy habitation be
This plain abode, this simple shrine
This unfrequented heart of mine!

ELIZABETH HENRIKSEN.

The Critic in the West

It is undoubtedly in the interest of dramatic criticism that a thoughtful correspondent sends the appended paragraph, clipped from a Kansas newspaper, and in this same spirit it is reproduced.

"The 'Madisonian' shows, a musical comedy, had a pretty fair crowd last night at the opera-house, and the audience seemed pleased with it. If one could judge by the applause that greeted nearly every stunt presented, Dan Russell, the 'big fat man,' was a comical case, and kept the audience tickled all through the performance. He is the man who 'perched' the smart clerk on the train yesterday, for being too fresh in the presence of ladies."

The Mountebank

I give them tragedy—their eyes
With grief are wet;
And merry comedy, that wins
Their laughter, yet—

In smiles and tears, so poor as I
There is not one;
No heart nor home awaits me, when
The play is done.

'Honest men or women, have I none
That will be true;
No sympathizer, to come begging me
His woes to heed;

Not any dear jay-hawkered apt
Where mongrels creep;
Nor even one lone grave, where I
May staid to weep.

CHARLOTTE HICKER.

The Bookkeepers

The pugilist should keep a scrap-book.
The burglar—an entry-book.
The creditor—a balance-book.
The materialist—a check-book.
The cook—a reference-book.
The miser—a pocket-book.
The yachtsman—a sales-book.
The magnificence—a press-book.
The wife—an order-book.
The husband—a blank book.

The Point of View

"You can't get in here on a half-ticket,"
exclaimed the door-keeper at the circus.

"I thought I could," apologized the small-town citizen. "I have a bad eye, and I only expected to see half of the show."

"Then you'll have to get two tickets," said the door-keeper. "If you only have one good eye it'll take you twice as long to see the show."

RACING BY SAIL AND BY MOTOR TO BERMUDA

Two Kinds, Both Tired

An agent of the Interior Department tells many stories illustrating odd phases of the Indian's character.

"There was a farmer in the West," says this agent, "who was in a difficulty to secure help on his farm. Indians were numerous in the neighborhood, but they were poor workmen. Always tired, they would put down the hoe or the rake as soon as the master's back was turned, and, selecting a cool spot, they would lie down in the shade and sleep the day away.

"But one morning a very tall, robust Indian came, asking the farmer for work. 'No,' said the white man; 'you will get tired. You Indians are always tired.' 'This Indian not like other Indians. Never get tired.'

"The upshot was that the Indian was engaged and put to work in a corn-field. The farmer went away. When he returned, an hour or two later, the Indian was asleep under a tree.

"Here, wake up!" exclaimed the impatient farmer. "You told me that you never get tired!"

"'Tch!" granted the red man, yawning. "This Indian never get tired. But if he not lie down often, he would get tired just like other Indians."

An Obvious Error

The Atlanta Georgian says that the same Taft presents certain mistakes in the political symposium.—Daily Paper.

The Elymester read this note and laughed. Said he: "That fellow must be daft. If he can't see the coat of 'Taft.' To Poets here, and Poets aft, in days like these, when men of craft, When men of deep and little draft, Go in for every kind of graft. Somebody must his ribs have chaffed, Or else his lanky nibble's staffed. As Editor he should be galled. If he can't see the emblem's self, Of rhyming words to point the shaft With which the expert Poeta walt. The thoughts their Muse has paragraphed—For and against old Billie Taft! Go to, good sir! You're off your huff!"

An Eye for Business

A MASSACHUSETTS MAN recently came to grief in a horse transaction at Westfield in that State. A day or so after his purchase he sought out the man who had "done" him, and, in a tone of mingled anger and reproach, demanded what the owner had meant by telling him that the horse was "without a fault."

"This morning I discovered that the least bit blind in one eye," protested the purchaser, "you weren't telling me the truth, you know!"

"Aw, grant!" came from the hardiheaded dealer. "That ain't his fault; that's his misfortune!"

Johnny Was a Sport

It happened in Sunday-school. None of the children had studied their lessons, apparently, and as for Johnny, the new boy, he wasn't supposed to know much about it, anyway.

"Now, Willie," said the teacher, "who was it swallowed Jonah?"

"I dunno," giggled Willie.

"Jonah, can you tell me who swallowed Jonah?" continued the teacher.

"You can search me," said Freddie.

"Tommy, who swallowed Jonah?" asked the teacher, a little severely this time.

"Please, ma'am," whimpered Tommy, "it was me."

"Well, I declare!" ejaculated the teacher. Then turning to the new boy, she asked, "Johnny, who swallowed Jonah?"

"'Til little," said Johnny. "What's the or were?"

A Grave Memo

[illegible]

Many are the complaints which reached the War Department concerning practical fieldmarking of which the most has expressed no more than a desire for a more efficient and accurate method of marking. The present use of Majors' and Ensigns' pencils, and the work difficult and many times impracticable on the ground, is a fact, which led to its adoption in 1916 on the idea that the men would be eager to service in the field. It has been in effect, however, it has caused discontent and unhappiness, and caused the termination among enlisted men who are much in demand to refuse to call when their present term expires. This is especially so in Cuba, where the chances of field duty in that sort of climate are uncomfortable to the degree of being nearly unbearable.

It is realized that the regulation is of no great value, since the work is done by untrained laymen and an incident of disobedience—a combination of order and chaos—is calculated to lead to the disturbance of that discipline which is necessary in a military organization. In the marching order has been exposed to some extent; and at one or two other points where it has been difficult to maintain an unaided strength, the weak members have been omitted temporarily.

MOTOR CARS

Contain the following special features, which largely account for the great success of this season's models:

CRANKSHAFT—Saved out from solid block of Special Chrome Nickel Steel. Not one of the hundreds of these shafts in actual use has broken or given any trouble whatever.

CARBURETOR—New Multiple Jet Type, giving just the right and most economical mixture for high or low speeds.

I-BEAM FRONT AXLES—Drop forged in one piece without welding. The grain of the metal courses uniformly from wheel-pivot to wheel-pivot.

TRANSMISSION—Improved type. Entirely does away with the troubles that occur in this member of the mechanism in many types of cars.

CLUTCH—So constructed that it takes hold evenly, gradually, and firmly, "savage" engagement being impossible.

With these and other superior mechanical features are supplied bodies that for beauty of design, finish, and appointment are unequalled in cars of other makes. This fact is conceded even by our strongest competitors.

American Diplomacy

ITS SPIRIT AND ACHIEVEMENTS

by

JOHN BASSETT MOORE

*Author of
"Extradition and International Law," "Rings of
Dignity of International Law," etc.*

For years Professor Moore has been regarded as being the highest living authority concerning the history of American diplomacy. This series of papers on American diplomacy has commanded wide attention, not only in this country but in all the capitals of Europe as well, and places many historical facts before the reading public for the first time. It shows how from the very first the American policy has been to negotiate treaties and carry on international business fairly, squarely, and aboveboard; and it unfolds and expounds in a clear and connected form the distinctive principles and policies the maintenance of which has caused American diplomacy to be acknowledged as one of the great formative forces in modern history.

NOVELS FOR SUMMER READING

The Cruise of the "Shining Light"

By Norman Duncan

"Nicholas Top is a character that Dickens and Stevenson might have envied. He will take his place as one of the most likable 'damned rascals' in modern fiction."—*N. Y. Globe*.

"No modern novel has so gripped me in years. If readers of fiction have not lost a taste for 'style' in writing, poetry in description, and lifelike characterization, *The Cruise of the 'Shining Light'* should take rank at once as the finest novel of recent years."—HENRY C. SHELLEY, Literary Editor, *Boston Herald*.

The Mystics

By Katherine Cecil Thurston

In this new novel the author of *The Marquerader* discloses a strange and almost mediæval situation in the heart of London to-day. Its unreality becomes convincingly real as scene follows scene with the same persistent excitement and dramatic suspense which marked *The Marquerader*.

Stolen Treasure

By Howard Pyle

Buccaneers and pirates, brave men, good and bad, move across these exciting pages. One follows their daring adventures with a return of youthful enjoyment in thrilling exploits on the high seas and in the struggle for yellow gold. The volume is beautifully illustrated by the author.

To the Credit of the Sea

By Lawrence Mott

A book full of the sweep and savor of the sea. It is startlingly real in the dramatic scenes it presents in the lives of the brave fishermen off the "Banks" and Labrador coast. The heroism, daring, and self-sacrifice which make up so large a part of their careers are splendidly portrayed.

THE INCOMPARABLE WHITE

THE CAR FOR SERVICE

Fastest Time in Wilkes-Barre Hill-Climb

In the Wilkes-Barre Hill-Climb, held on May 30th, a stripped 30 horse-power Model "G" White Steamer made the climb up "Giants' Despair" in 1:49 4-5. This time is ten seconds faster than the best record made by a gasoline car. Practically all of the more prominent makes of cars were represented, there being over 50 contestants in this classic event.

Our record was made in a trial against time. We could not compete against anything else because the Contest Committee of the Wilkes-Barre Automobile Club barred us from all the regularly scheduled events, including the "free-for-all," because, as the President of the Wilkes-Barre Automobile Club informed us, in a formal letter returning our entries, "It was found that a large number of gasoline entries could not be received were steam cars allowed to compete in the gasoline events."

Packard "THIRTY" 1908

FOR the season of 1908, the Packard Motor Car Company continues its time-tried policy of devoting its great factory to the production of motor cars of one model—a new Packard "Thirty." In its most notable form this is a touring car, and also is furnished as a runabout, limousine and landaulet, or equipped with cape cart or Victoria top. Capable, modish in design and luxurious in appointment, the car is a Packard throughout, with improved detail and refined construction. The price of the touring car, in standard finish and equipment, is \$4,200, f. o. b. Detroit.

COMMENT

The State of the Railroads

When the rate-fixing proposition was under discussion it was said that it was a step towards state ownership of railroads. This was vehemently denied by those who were supporting Mr. ROOSEVELT and by Mr. ROOSEVELT himself. The bill that was born from the conflict of the President and the Senate was very far from being that which was contemplated when the agitation was begun, but it is pointed to as evidence that neither Mr. ROOSEVELT nor his friends then advocated state ownership. Nevertheless, the impression is strong the other way, and practical results have followed. Many States have enacted laws the operation of which will tend to put the management of roads under the States as completely as if they were owned by the governments. This is notably true in the State of New York. In Pennsylvania a two-cent fare bill has been enacted, and the Pennsylvania and other railroads have been obliged to raise their commutation rates in order to meet the losses incurred by being obliged to reduce through rates. Whether they are justified or not justified in doing this may be demonstrated by the application of the rules of arithmetic; but the commuters of Pennsylvania are endeavoring, by caricatures and libelous broadsides, to convict one of the roads of the State of unjustly increasing fares. They also talk of the necessity of State intervention, and even of State ownership, to meet the alleged disingenuous attempt of the corporations to throw obloquy upon the two-cent law. It was predicted that in such a way State ownership would follow the attack on the roads. The roads would be injured. They would be obliged to curtail their service to the public. They might become inept. This would indicate to their radical enemies that they were simply trying to take vengeance on account of hostile legislation, and they would thus demand that the inquiry should be punished by the expropriation of the property of the roads. The events happening in Pennsylvania are justifying the criticism.

The Real Trouble

Much, if not all, of the real trouble lies in the fact that the railroad situation and the railroad inequities have not been and are not calmly discussed. There have been so much noise and so much excitement that wild opinions are held, and laws worthy of their parentage have been put upon the statute-books. Such laws must in the end produce their abundant crop of trouble. It is not, however, what any particular person has done that is the real cause of the trouble; it is what is threatened to be done, what has been fore-shadowed, what men in power are manifestly ready to do, that produces anxiety in the minds of conservative men, who recognize not only the value of law, but also the importance of industrial and economic freedom. How the minds of rational and self-

contained men have been affected by the mental and moral atmosphere of this country has been abundantly illustrated of late. Mr. JAMES J. HILL says that the time is coming, if present conditions are maintained, when the government will be obliged to take over the railroads for the simple reason that private capital cannot undertake, in the face of hostile legislation and the threats of influential public men, the task of so equipping the railroads that they may meet the growing demands of business. Mr. HILL has been denounced as foolish for saying this, but no intelligent person who knows Mr. HILL and who understands his problem will call him foolish. Baron ROTHSCHILD, the head of the London house, says that the President has gone too far and is responsible for the loss of credit by the railroads. LEROY-BEAULIEU, not only a distinguished but a fair-minded and thoroughly passionate economist, rebukes Baron ROTHSCHILD. At least all these statements and such action as that which has been taken by the Pennsylvania railroads mean that here, and here is a debatable question; but serious and radical action has been taken upon it by lawmakers without discussion and, presumably, without thought. Debate is what we ought to have had; debate is what we now need; and to obtain this we must have an opposition party and an era of calmness.

Overcapitalization of Railroads

President ROOSEVELT does not seem to have convinced by his recent economic words all of the followers of his economic deeds. There is still doubt on the subject of overcapitalization of railroads. Mr. ROOSEVELT says that, taken by and large, railroads are not overcapitalized; but he does not give us the reasons or the proof. Those who, therefore, question his accuracy would do well to read the short address on this subject delivered by Mr. FRANCIS LYNDIE STETSON at the recent dinner of the Economic Club. Some people and editors who have been hazy see now that the overcapitalization of a business which must encounter competition cannot affect the prices which it charges, but injures only those who thus waste their money by letting it lie idle. As to railroads, Mr. STETSON points out that their rates are usually fixed by competition or by State legislation, and, therefore, overcapitalization cannot determine their rates. The denial of this truth by Mr. ROOSEVELT's surprised friends is still going on—in gasps. But if these friends will read Mr. STETSON, they will see that Mr. ROOSEVELT has really a good reason for his faith, whether the faith is new or old. Moreover, if they will continue their research, and will understandingly read Mr. STETSON's advice to eliminate the dollar-mark from shares of stock, and make each share frankly and openly a proportionate share of the whole capital—meaning the assets of the corporation—they will be able to comprehend how the vulgar of stock-watering will surely fade away, and also how little sense there has been in the seeming economic talk of those whose minds are not yet prepared for the reception of the truth even when it is offered to them by the President of the United States.

The South and Mr. Bryan

The discussion of Mr. BRYAN and his policies in the Southern newspapers increases in interest. The leading journals of the South now declare that there is no reason for preferring Mr. BRYAN to Mr. ROOSEVELT; that they are substantially in agreement on public questions; that JOHN TEMPLE GRAHAM was abundantly justified in nominating, as the joint ticket of the two parties, ROOSEVELT and BRYAN. It is justly pointed out that—as this ticket, although logical, is impossible—Mr. BRYAN could not defeat Mr. ROOSEVELT or any candidate whom the President would select and who would be in agreement with his policies. Those who believe as these two men believe would prefer Mr. ROOSEVELT for many reasons. An one of the Southern editors puts it, ROOSEVELT has his record to point to; he may prove his sincerity by what he has done; while BRYAN could simply promise that he would do as well. But the Southern newspapers are also, as we have already pointed out, giving affirmative reasons for their increasing opposition to Mr. BRYAN. The Richmond Times-Dispatch, quoting Senator RAYNER's protest against centralization and paternalism, says:

These are the two questions that touch Democracy at the vital point. These are the fundamentals, compared to which Mr. BRYAN'S government ownership and referendum proposals are no sounding brass and tinkling cymbals.

The Meridian (Mississippi) *Star* nominates GRAY and JOHNSON, and says that—

Colonel BAYAN can carry the solid South, not necessarily including Maryland and certainly not West Virginia, and no more. CHASE and JOHNSON, or JOHNSON and CHASE if preferred, could carry the solid South and without doubt the States of Minnesota, Maryland, and Delaware. Upon such a ticket, whether JOHNSON or GRAY head it, nothing is in the way to hinder cordial and fighting union between the two wings into which the party separated in 1868. The "Bryan Democrat," if he is a Democrat indeed, can follow the Minnesota "regular," and the "Gold Democrat" can support GRAY. Meanwhile, both are Democrats in their uncompromising opposition to the centralistic policies of ROOSEVELT, which menace the rights of the States under the Constitution, both are tariff-reformers of approved record and by clear conviction, and both are free of the tainting endorsements of the "Wall Street crowd."

And Mr. BAYAN, as the growing number of Southern editors attest, is not "opposed to the centralistic policies of Mr. ROOSEVELT," nor is he such a sincere and hearty tariff-reformer as the Democratic party now seems to demand for its leader in 1908. The contest is warmly sincere and very American.

Another Veto by Governor Hughes

The veto of the train-crow bill by Governor HUGHES follows hard upon his veto of the two-cent fare bill. The bill, in brief, required railroads, under certain conditions, to have larger train crews than they are accustomed to have. Governor HUGHES asserts that for the Legislature to compel the roads to make the expenditure required by the bill would be equivalent to the taking of property without due process of law. This is another sensible veto message. It is easy to see, however, that the Governor is especially doubtful of the wisdom of Legislatures, for under the Public Utilities law his commissioners may do precisely what was sought to be accomplished by this vetoed bill. It is yet to be established that politicians holding administrative positions are able to manage property, private or public, any more wisely than any politicians who make the laws. It may be that a HUGHES commission would, but would an OUEL or a BLANK or a WOODBURY or a HENNER commission satisfy the Governor's desire to see justice meted out to corporations as to individuals? Besides, it is true that we have discovered that government in private by commission is safer for the public and the individual than government in public by Legislatures!

Canada's Way With Railroads

In working out the problem of railroad regulation, and especially in determining how State control and Federal control can be made to work together for something more desirable than general railroad reiteration, there may be something to be learned from the experience of Canada. There, a railroad which is declared to be concerned with the business of the whole Dominion, is by law under control of the Dominion government, whereas a railroad which has to do only with a single province is looked after by that province. What the Dominion government attends to, the provincial governments let alone. Some such division of supervisory activity must be brought to pass in the United States.

The City May Not Sell Ice

Governor CHASE, acting on the opinion of the Supreme Court of the State, has vetoed a bill passed by the Massachusetts State Legislature authorizing the city of Holyoke to go into the ice business. There is a good deal of municipal-ownership criticism of this decision, and one or two editors have reviled the Supreme Court, while they have also expressed their doubts of the righteousness of the Governor who would follow such an anticorporatist opinion. It being an important law, in their opinion, why should the Constitution be permitted to stand in its way? It may, indeed, be questionable whether many of the States may not embark in business, since the grain-elevator case, and since it was also decided that a State may lend money to a grain-mill; but in Massachusetts it is still the view of the court that a city must attend to its own business, and may not enter into the ice, or into other, businesses which are usually carried on by private enterprise. It is not clear, indeed, that the old-fashioned law is not, on the whole, a good one. In the city of New York the people had a foretaste of the kind of business which the selling and hoarding of ice may become when it is controlled by city politicians; and their

experience supplemented that which they have always enjoyed when city politicians have had anything to do with purchasing supplies, building court-houses, or determining upon the fire-proofing material that may be used within the city limits. Sometimes, as in this case, a court and a veto may give us time for wholesome thought and profitable reflection.

War Between Labor and Capital

The OUCHMAN testimony might not be permitted to escape as merely the talk of a monster of iniquity, confessedly not only a fiend, but a rascal. OUCHMAN was also the embodiment of a sociological philosophy which has been taught and advocated by a good many men who are not criminals in fact, or wild beasts at heart. Some of the most pious of men have preached the doctrine that the relations between labor and capital are the relations of war, and that those who are engaged in such a war, especially on the side of labor, are right in resorting to the methods of war. This philosophy has excused the attempts of some unions to deprive non-union men and their families of the right to earn their bread, while it has looked with complacency on the destruction of property and on assaults. Its general view is that the law should not be enforced against the soldiers of the fighting army of labor. Discussion of the right to kill has not been indulged in, but actual killing has been overlooked. OUCHMAN is a pretty extreme product of the dangerous doctrine, but extreme products are to be expected from such theories as some labor leaders have preached and taught. Perhaps this horrible illustration of its evil possibilities will result in a mitigation of the philosophy.

What Will Be Done About the House of Lords?

The British Prime Minister, Sir H. J. CAMPBELL-BANNERMAN, has announced that the Liberal party, of which he is the official head, is determined to impose certain limits on the obstruction offered by the House of Lords to legislation desired by a majority of the British voters—a desire embodied in bills passed by the House of Commons. To that end, he says, British Liberals will insist that the right claimed by the Upper House to amend or reject measures approved by the popular Chamber shall be allowed only during the lifetime of the Parliament in which such measures were introduced. He means, in other words, that if at the general election following the amendment or rejection of a particular bill by the lords that bill should be made a pivotal issue, and the constituencies should approve of it, the measure, when sent up in the next Parliament, must be suffered by the lords to become a law. For the principle thus advocated there is something to be said. In neither France, nor Italy, nor Prussia, nor Austria, nor Hungary, although in each of those countries the Upper House is only partially hereditary, would it venture to thwart persistently and definitely the popular will expressed by a vote of the Lower Chamber. The only countries purporting to enjoy parliamentary institutions in which the Upper House is accustomed to throw out bills at its option—outside of the United Kingdom—are the United States and the German Empire, and neither our Federal Senate nor the Bundesrath contains a hereditary element. Under the circumstances, it seems reasonable that the obstructive power asserted by the British House of Lords should be subject to some restriction. But how can the principle, which on its face seems plausible enough, be embodied in British law? It cannot be established by a bill, for a bill requires the concurrence of both Chambers before it is presented for the approval of the sovereign. Evidently the only thing that the House of Commons can do is to pass a resolution declaring some curtailment of the power claimed by the hereditary Chamber to be indispensable, and defining what the curtailment should be. Then the ministry for the time being could dissolve Parliament and appeal to the country on that single issue.

Will the Lords Reform Themselves?

It seems probable that long before Sir H. J. CAMPBELL-BANNERMAN's project can be carried out, the composition and character of the House of Lords will have changed materially by its own act. Many of its most eminent Federalist members have from time to time acknowledged that as at present constituted it is an anachronism and requires trenchant modifications. Such was the position taken, for

example, by the late Lord SALISBURY. The peers themselves have agreed on the appointment of a committee on the composition of the Upper House, which includes representatives of every shade of opinion. Moreover, there is at least one way in which the House of Lords could, without pursuing a revolutionary course, relieve itself of the odium attaching to hereditary legislation. Neither the Scotch peers nor the Irish peers who sit and vote in the House of Lords do so by hereditary right. They exercise those privileges by election. The Act of Union between England and Scotland provided that the Scottish peerage should meet and choose twenty-four of its members to sit in the House of Lords during the term of a given Parliament. On the other hand, the Act of Union between Great Britain and Ireland stipulated that the Irish peerage should have the right to elect for life one hundred of its members, to sit and vote in the British Upper House. Why should not the elective principle be applied also to the peerage of England and the peerage of the United Kingdom—two bodies which are by no means identical? Whether the elected representatives of the two peerages last named should be chosen for life or for a given Parliament is only a question of detail, but for obvious reasons it might be expedient to follow the Scottish precedent.

A Monument to Champlain

Long before the English looked upon this country either as a place in which freedom of conscience or individual liberty could be enjoyed more fully than in the old home, or where trade was profitable, the Frenchman came here not only to trade but to establish a purer church than then existed on the continent of Europe. SAMUEL DE CHAMPLAIN was one of the first of his countrymen to invade our wilderness. It was on Lake Champlain that he and his followers, mostly Indian enemies of the Iroquois, fired the first shot that was aimed by Frenchmen against these warlike savages—a shot that made them in the long run the bitter enemies of the French and the friends of the Dutch and the English. On the Fourth of July the people of Champlain, New York, are to unveil a monument erected there by the French-Canadians who now dwell in the United States. That fatal shot shattered French power in America, but it is well to have a monument to the strong man who fired it on the lake which bears his name.

Boston's Art Museum That Is To Be

The plans of the new Boston Art Museum, which have been under diligent and exacting consideration for four or five years, were published on June 15 in the Boston papers. They provide for buildings that eventually will cover the whole of the twelve-acre site on the Fenway. The part to be first constructed, and on which work began last April, will cover about four acres. The museum is to be a two-story building—or group of connected buildings—in the classical style. Mr. J. R. COOMER, Jr., lately the temporary director of the museum, says of the plans in the *Transcript*:

We have a building that is formal but not stiff, spreading but not low, impressive without great height, varied without restlessness, rich without ostentation, dignified but not forbidding; a building in which reserve and spontaneity are happily blended, in which the masses are simple, the composition elegant, the proportions exquisite, the details appropriate, the ornamental motives few but significant, the purpose unmistakable, the general character one of refinement and distinction.

This is an impressive category of commendations, most of which, we presume, will be disputed first or last, but Mr. Coomer is a person amply qualified to have views about buildings, and he means all that he says. It is well known that extraordinary pains have been taken to build in Boston an art museum that should be a model of what such a building ought to be. The opportunity was exceptionally good. It was not a case of adding to an old structure, but of building on a new site as nearly as possible what was wanted. Most of the great art collections of Europe are housed in buildings that were intended for other uses, and museum construction and arrangement come much nearer to being a new problem than would be imagined, considering how old the world is. There is every prospect that the work so carefully studied and now begun will give to Boston the most notable art-museum building in the country, and even in the world. The museum, with this new home in prospect, has recently acquired a new director in Professor ARTHUR FAIRBANKS, of Ann Arbor, a learned and accomplished New-

Englander, who for the last year has been Professor of Greek and Greek Archaeology in the University of Michigan.

Good Results of the Animal Controversy

What best justifies controversy is the discovery of truth and the spread of knowledge. These laudable ends are being considerably promoted by the war that started with President ROOSEVELT'S condemnation of the nature-fakirs and Nature-fakir LORRY'S impudently denial of what Mr. ROOSEVELT asserted. The commotion about the animals and the animal writers led Orthodox-naturalist BRUMMOND to record his absolute denial (quoted into last week's WEEKLY) of Dr. LORRY'S theory that there is a great deal of individual character among the birds and beasts. Mr. BRUMMOND holds that they are governed wholly by instinct, and that none of them ever reason. It is interesting to find so conservative and practised an authority as WILLIAM T. HORNADAY in disagreement with Mr. BRUMMOND on this important point. When Mr. BRUMMOND takes the position that animals are without reasoning intelligence, that they act entirely from instinct, and are devoid of anything like individuality, Dr. HORNADAY finds it quite as hard to follow him as to follow Dr. LORRY, and Dr. LORRY he considers "the most visionary writer who has ever appeared before the American public in the guise of a naturalist." Dr. HORNADAY is convinced that animals "can and do reason from cause to effect, that they do not act solely from instinct, and that they have much the same passions as men, only in a less degree." In support of this conviction he puts sundry monkeys and elephants on the witness stand. The truth about the animals seems to lie somewhere between Mr. BRUMMOND and Dr. LORRY. Of course animals have individuality. Every child knows that, and though Mr. BRUMMOND seems to have denied it, it is likely that on that point he was misunderstood. But about the reasoning powers of animals he and Dr. HORNADAY clearly have reached opposite conclusions, and it will help towards attainment of authoritative truth to have their warring convictions made public.

College-bred Americans

As a maker of discourse on public occasions Ambassador BAYNE is amply fulfilling the large expectations that accompanied him to these shores and met him here on his arrival. He makes very good speeches, and lots of them. In every one there are interesting thoughts, as when in a Commencement address at the University of Chicago he observed that nowhere in the world does so large a proportion of the people receive a university education as in this country, and that the effects of it would doubtless be felt in the next generation. "Let us hope," said the ambassador, "that they will be felt not only in the complete equipment of your citizens for public life and in their warmer zeal for civic progress, but also in a true perception of the essential elements of happiness, a larger capacity for enjoying those simple pleasures which the cultivation of taste and the imagination opens to us all." Amen to that, and to all of it. The next generation will have its troubles, and will have them superabundantly unless this generation manages with what wisdom it can muster to settle some troubles that won't wait. East and West in this country there are a great many college-taught men now in public life, and the group of them includes many very obstreperous characters. They work, as a rule, for honest government according to their notion of it, but the variation in the notion extends all the way from President ROOSEVELT to Chancellor DIX. An increased proportion of college-bred men in our next generation is, on the whole, a hopeful detail of our prospects, but it does not insure us against wild leadership and lively times.

Economists Scarce

It is one of the signs of the times that the universities and colleges are finding it difficult to procure a sufficient number of desirable teachers of economics. There are few adequate graduate courses in economics, and there is a constant demand from the greater and the smaller institutions for instructors in the "dismal sciences." There are plenty of men to lecture on the manner in which economic law may be beaten by political expediency or by socialistic designs to eliminate or to improve nature, but of men who know and think, and who are prepared to teach what they know and think, there are too few to go around. Just now the man who can most easily obtain a job to teach is a real economist untainted by socialism.

Is Parliamentary Government in Russia a Failure?

THE second Duma, like its predecessor, has been dissolved, after a brief and unfruitful term of existence, but whether on that account the application of representative institutions in Russia should be deemed impracticable is a question as to which different opinions will be expressed by Reactionists on the one hand and pronounced Liberals on the other. The former will lay stress upon the fact that neither of the two defunct assemblies can be credited with having performed any substantial achievement in legislation, and that, instead of cooperating zealously with the executive in devising remedies, or, at least, palliatives, for agrarian disorders and fiscal shortcomings, each of them wasted time on visionary projects incapable of realization, and allowed itself to be made a forum for treacherous agitation, which no self-respecting government could be expected to tolerate. It is true that, under the electoral system which was established by Count Witte and which embodied a close approach to universal suffrage, no serious attempt was made to curb the anarchical power of the ignorant peasantry or of the ill-balanced proletariat; and that, consequently, the second Duma, like the first, contained a section composed of avowed reactionists, and another section which, calling itself Social Democratic, made no secret of its wish gradually or quickly to substitute a republic for a monarchical type of polity. Is that a conclusive reason for abandoning the constitutional experiment? Do not the French and the Italian Chambers of Deputies, the German Reichstag, and the Lower House of the Austrian Reichsrath include such a large Socialist party that frankly acknowledge a desire to transform the existing political system into a socialistic state? Would that fact be held to justify King Victor Emmanuel III., or Emperor William II., or Emperor Francis Joseph in abolishing by a coup d'état within his dominions the existing Constitution? The question answers itself.

Let us glance, next, at the charge that, in the case of Russia's two popular assemblies, the time which should have been given to much-needed legislation has been squandered on revolutionary intrigues and incendiary harangues. From this point of view the second Duma has, as a matter of fact, been much more discreetly managed than the first, and has exhibited creditable progress in the right view of representative institutions. Under the leadership of the Constitutional Democrats, whose ascendancy has been due, this time, not to numerical preponderance, but to sheer intellectual weight, no resolute attempt has been made, it is true, in spite of freedom of debate—the fundamental condition of parliamentary government—but over and over again the premeditation to give giving the executive any plausible pretext for dissolution has been carried out. For instance, the second Duma, by postponing indefinitely the question of ministerial accountability to the people's representatives; the project of a law proclaiming general and immediate amnesty for political offences; the permanent abolition of courts martial in times of peace; and, finally, the incorporation of the principle of compulsory expropriation in the agrarian programme. All these thorny questions, as in which it was known the legislature and the executive could never be brought to an agreement, were virtually, so far as any definite action was concerned, adjourned to the Greek kalends. What, therefore, in the week ending June 15, the Czar's ministers made up their minds to get rid of the second Duma, they had to hit upon a demand to which, as they knew beforehand, no self-respecting legislature could possibly submit. It was, of course, with this purpose in view that on June 14 Premier Stolypin—apparently reluctant but constrained by the majority of his colleagues—addressed to the Duma a so-called ultimatum, in which he relied upon the people's assembly to renounce their fundamental privilege of personal inviolability, thus authorizing the arrest and imprisonment of an fewer than fifty-five of their fellow members, although against only sixteen of these was the government able to present any formal charges. Even then the Constitutional Democrats succeeded in preventing the assembly from retreating a haughty, an indignant and a defiant protest, and secured the reference of the legality of the demand to a committee, which at first was ordered to report on Saturday, though it subsequently obtained a postponement of the decision to Monday. The government, however, presided in Premier Stolypin—though in this particular he seems to have acted against his will—would not concede even a few additional hours for the consideration of a question which, obviously, struck at the root of representative institutions, but inconspicuously, at two o'clock on the morning of June 16, published a decree proclaiming the second Duma dissolved. Under the circumstances, the fair-minded observer will say that the behavior of the Russian executive was less edifying than that of its victims, and that nothing so became the second Duma as the dignity with which it met its death.

Convinced, manifestly, of the uselessness of trying a third time to obtain an acceptable legislature by the electoral methods which Count Witte had devised, the Czar was prevailed upon by his advisers to put forth on June 16, some hours after the second Duma had ceased to exist, a decree proclaiming a new electoral

law, in conformity with which will be chosen, on September 1 of the Russian calendar, a third legislative assembly, which shall convene on November 1. The new electoral law differs essentially from its predecessor, in that it repudiates the principle of universal suffrage. It begins by imposing partial disfranchisement on the exterior sections of the empire, including the Russian possessions in Central Asia, Siberia, the regions of the Caucasus, Poland, and the three Baltic Provinces. The extent to which disfranchisement has been carried in these instances will be exemplified when we say that the Caucasus is to have but ten instead of the twenty-five members it possessed in the second Duma, and that Poland's former quota of thirty-seven is to be cut down to twenty. In the three Baltic Provinces the franchise is to be curtailed so materially by a property qualification as to give a great preponderance in voting power to the German-speaking landowners, as against their Lettish vassals, who used the suffrage to elect delegates of the Left to the first and second Dumas. Even in the case of the inhabitants of Russia proper, whom the new law ostensibly aims to favor at the expense of all the rest of the Czar's subjects, the right to vote is narrowed by many and severe restrictions. For instance, the number of cities privileged to secure separate representatives is cut down from twenty-four to six, and even in these six cities the voters are to be distributed in two classes according to their property, and, as the deputies are to be divided equally between these classes, it is obvious that the rich minority will return as many representatives as the poor majority. As for the peasants, who constitute from eight to nine tenths of the population in Russia proper, they will have no right to return separate representatives in any of the provinces, and the number of secondary electors which they are empowered to return to the provincial colleges is so diminished that preponderance is assured to the landholders. The more closely these provisions are scrutinized, the more patent is the ingenuity applied to the procurement of an assembly thoroughly amenable to the wishes of the sovereign and of the upper classes, whose loyalty, by the way, seems to be taken for granted. To make assurance doubly sure, the Minister of the Interior is authorized, at his discretion, to redistribute the voters in any district, according to their property or nationality. Thus, by way of precaution, an unlimited power of interference is reserved to the executive.

Will these calculations prove well founded, or, like so many strangely corrected schemes of reactionists in recent times, are they doomed to miscarriage? In counting on the loyalty and tractability of the upper classes, the Czar's advisers may find that they have been mistaken. That was the experience of the STUART monarchy in 1641, and it was that of the ROMANOV monarchy in 1788. Experience has shown that self-interest impels the landowning class to profligate the masses of the agricultural population. If, so possible, the exercise of administrative and legislative functions, the framing of an electoral law, can the Russian franchise-holders hope to secure a legislative body more subservient to the wishes of the autocracy and the bureaucracy than the existing Council of the Empire, a majority of whose members are mere nominees of the Czar, while even the small elective element represents a very high-class electorate. Yet what happened in the Council of the Empire on June 15, when an immediate dissolution of Parliament was known to be inevitable? It was pointed out by some Liberal members that in the interval between the dissolving of the second Duma and the convening of a third popular assembly, some constitutional check ought to be imposed on the action of the Czar's ministers and of the permanent Senate, which is wholly composed of the sovereign's appointees. For the imposition of some such check, no fewer than seventy-one members of the Council of the Empire voted, and the proposal was rejected by a majority of only four, which never could have been obtained had not the spokesmen of the government and also Count Witte, who, of late, has been reckoned in the Opposition, combined to denounce the suggestion. It is, in a word, impossible for the Reactionists in Russia to contrive a national legislature which can be trusted to prove more docile than the French States-General which met at Versailles in the spring of 1789 were expected to be. Yet we know what the States-General did. They first transformed Bourbon absolutism into a constitutional monarchy, and then supplanted it by a republic.

On Reading Elegies

It sometimes seems as if sorrow were the best building material in the world. Out of it arise churches, monuments, pictures, and poems. There is, too, a certain impersonality about grief. One's first reflection upon it is apt to be that it is a race inheritance; not that it is mine or yours, but that some man or race, or if so, at his peril, in reading English poetry there is hardly a division which is at once so thought-provoking, so exalting, and so delightful as the elegies. They seem, by their very form, to be made for a man who wishes to sum up his doctrine of life and love. Friendship, too, is somehow so very closely connected with flowers that of the famous English elegies only one lacks a wonderful flower passage. The foremost one opens with high larks and dovels came, the wild

thyme and the gubbing vine, the white thorn, and then after many a digression we return to a lovely stanza built of the rather primrose, tufted crocus and pale jessamine, the white pink (evidently the scented clove-pink) and the pansy froaked with jet, the glowing violet, the musk-rose, and well-attired scabious, the convalls that hang the pendulous head, the amaranthus and daffodillies that fill their cups with tears, and all the quaint enamelled eyes of the flowers that peer above the fresh lap of earth. It is difficult somewhat to fancy daffodillies filling their cups with tears, because those of the present age have a wasteful habit of holding their cups sideways or half down, but the conceit is charming none the less.

The scapular SHELLEY, a "paradise spirit beautiful and swift, a love in desolation masked," comes forward in his elegy with his head bound with pandies overblown, and faded violets, white and pied and blue, his light spear topped with a cypress cone and wrapped with ivy. The recollections of we become him best—the pandies overblown for weight of heavy thoughts, the faded violets for truths unaccepted, the ivy for sad fidelity, and the cypress cone for early death. The half secrets that the wonderful bouquet of flowers of another poem could not have been incorporated into the elegy just to keep the flower tradition of English elegies alive. In that poem, all rampant as it is of red and blue, we find pied wind-flowers, violets, and daisies, "those pearly anemones of the earth," faint convalls, tender bluebells, and that tall flower that "wets its mother's face with heaven-collected tears." Probably this flower is the lily; or is SHELLEY, too, of the mind that the daffodill lifts up its cup in the rain? He moves on to the warm lodge, and here grow lush gladioli, the pretty English name for the wild briar rose, and cow-kind, which is probably not the same thing as our common cowhee, the moonlight-colored May or hawthorn and cherry blossoms and wild roses and ivy serpentine, and then come flowers, anemone, black, and streaked with gold. Any one who shudders at the thought of a black flower need only see a cluster of black tulips in a bed of gold and orange ones to be converted. "Thyris" stands perhaps first among the elegies for the number and beauty and richness of the flower passages, when, as the high mid-summer pomp comes on, the musk carnations break and swell, the gold-dusted anemones yawn, sweet-william gives out his homely cottage smell and stocks blow fragrantly. Rhoses, and jessamine-muffled lilies make the dressing garden trees and the full moon and the white evening star, and there are, moreover, whitebloss, waxing, uncurling ferns, and bluebells trembling by the forest edge.

"In Memoriam," first named "The Elegies," suffers a certain lack of concrete imagery from the absorption of TENNYSON's mind with the conflict between science and religion, but here and there the little flowers peep through more serious debate, as:

"Bring cereals, bring the fragrant spear.

The little sparrow's darling blue,

Deep tulips drenched with fiery dew,

Lazarus, dropping souls of fire."

The primrose and the woodbine, the rose, the daisy, and the lily make fugitive appearance, and—

"Unloved, the sunflower, shining fair

Days round with flames, her di-X of seed

And many a rose-carnation feed

With summer-eyes the humming air."

Once more there is casual mention of winding under ranks of lilies, and the golden reed, but the trees of "In Memoriam," beginning with,

"Old yew, the wadery grapest at the stones

That name the underlying dead,"

and the poplar, ash, haw, maple, and those unnamed that

"Laid their dark axes about the field,"

are more striking than the flowers.

What a deep-rooted instinct it is, too, that death should be the incentive for a man to sum up his attitude toward life. To lose a perfect companionship by death is to be initiated into a high and dignified sorrow, for here there is no question of effort to hold the thing we lose. It is lifted into the high plane of fate, and the task is only to mould the mind to unrelenting fidelity, to transform sorrow into worthy thought. So TENNYSON draws from his loss a lesson to careless clergy, and ends with a lovely picture of the saints above, in solemn troops and sweet societies, wiping the tears from the eyes of Lyubas, and making him the genius of the shore who shall be good.

"To all that wander in the perfumed flood,"

Perhaps, too, the rather heartless comment of the angels as he twitches his mantle blue,

"Tomorrow to fresh woods and pastures new."

It is only the necessary resolve of man, he grieved that it may, to redeem the hours—and no more heartless than the placid resignation that slowly draws over the anguish of "In Memoriam" and ends with—

"That God, which ever lives and loves,

One first, one last, one element

And one far of divine event

Toward which the whole creation moves."

MATTHEW ARNOLD's less singular temperament drew from the onset of the time, here on his lonely ridge, only the positive, "Despair, I will out," and the yearning for the whisper:

"Why faintest thought? I wandered till I died.

Room out! The light we sought is shining still!"

A science akin to SHELLEY's hymn to Intellectual Beauty it is, and less profoundly religious than the wonderful lines of the "Adonais," which should have been the final ones:

"The One remains, the many change and pass—

Heaven's light forever shines, earth's shadows fly—"

One might wish that Mr. SWINBURNE's seven sonnets on the death of HENRY WILSON had been woven into strict elegiac form, and that KEATS had been moved to leave in an elegy amongst his Odes, and even that Mr. MERRITT's wonderful sonning-up of his attitude toward life had been collected, too, with love and care:

"Full hearted is the song, though he

The singer passes; lasting, too,

For souls not lost in airy

The capture of the forward view."

"With that I bear my woe, though faint

Till what I am lost shoreward drives—

They are the vessel of the thought,

The vessel splits, the thought survives."

Personal and Pertinent

THERE is a story going around the newspapers which says that Senator LA FOLLETTE was given his degree of B.A. at the University of Wisconsin by JOHN HANCOCK's influence. This may be. JOHN HANCOCK was president of the University of Wisconsin when LA FOLLETTE was graduated. This story says that LA FOLLETTE's average mark was below the "arbitrary standard" set by the faculty, and, therefore, the degree had not been voted him. JOHN HANCOCK, however, saw something in the young man which his examiners had not noticed. It must have been pretty well covered up, for if an American college student of that class could make the required average, his ignorance must have been thick and overpowering. But HANCOCK prevailed and LA FOLLETTE became a B. A. by a "small margin." Now it ought to be borne in mind that if this story be true, the compliment to LA FOLLETTE is greater than appears on the surface, for JOHN HANCOCK has always had a keen insight into men, and, for such of his life, college students constituted ranking for him. Once when he was a "class officer," the names of two men were read by him as absent from morning prayers. One of them, a pietist, stopped at his desk and said:

"Professor, when the chapel bell was ringing I was engaged in prayer and did not hear it."

"You're not excused," responded HUNT, with contempt in his eye and in his voice.

Then calling back the other man, who was about at the door on his way out of the room, he said to him:

"What's your excuse?"

"I haven't any, sir."

"You're excused."

He used to have debates in his class-room. At one of them, a student, not LA FOLLETTE apparently, whom HANCOCK subsequently described as a "flourishing fellow," in the heat of his eloquence, said, "I wish that I had the ability and the time to exhaust this subject."

"You have the time," said HANCOCK.

Senator MORRIS has been sufficiently ridiculed, but he had not to wait until his death for what they call, in periodical papers, an "apoplexy." When the "box," to speak of them as they speak of themselves, in the press gallery of the Senate, saw Senator MORRIS rise, they politely dropped back into the retiring room. One or two remained behind to keep watch, or to give warning to the rest, for MORRIS was very likely to wake up, or say something agreeable or pungent, as in his remarks about the "White House Curious." It was not because, in the opinion of the newspaper correspondents, MORRIS would not add something to the debate that they left their listening-seats in the gallery. They felt, indeed, that he would. They had a touching reverence for his great ability. MORRIS had, with them, the reputation of being the most learned man and the foremost constitutional lawyer in the Senate. But the learning, and the length of his speeches, were too much for their purposes. For their "specials," they needed more excitement and more of what their managing editors called "human interest." One of them once said that "only the associated press had wires heavy enough to carry a MORRIS speech." The tradi-

tion about his oratory was strange. Very few listened to him. Senators as well as correspondents had business elsewhere when Momax spoke. And yet it was recognized, or asserted, that there was strong stuff in every one of his speeches, and often, more often than not perhaps, this was true. Nor was there any doubt about the quality of his English; no one in the Senate of his time except KIMBALL, THURMAN, and CARLISLE spoke such clear and limpid English, and he often excelled these in literary quality. But men would rather hear the others because they had a better sense of balanced argument, because they emphasized their strong facts and arguments, while CORBELL, INGLETT, and LAMAR were preferred because their ornaments of embellishment were pleasing. Momax's tones were monotonous, but his voice did not have much range, and he became monotonous, often soporific. He talked along on a level with little intention, playing with his water-guard, stepping down now and then to pick up a book or paper, and so he would flow on for hours; he was usually too long to be effective. Another grave defect was his equal inattention upon every point, great or little, major or minor. As another Senator said to him:

"Momax, you haven't any perspective. I can't tell which of your points you consider the strongest; you are as long on what I should think a trivial argument as you are on what I should regard as your most important contention." No newspaper man ever went to MOMAX for news; perhaps he never had any; if he had, he would not tell, and newspaper men know a leaky Senator by instinct. In truth, he did not take much notice of caucuses and caucus secrets, but he was, nevertheless, potent, and he was, unconsciously perhaps, recognized as a Democratic leader who must be reckoned with. This was noticeably true in CLEVELAND's contest for the repeal of the purchasing clause of the Sherman act. When Senator TELLER, then a Republican, who was voluntarily leading the filibustering "to relieve the Democratic all-star Senator from Illinois against their own President," discovered one day that these same Democrats were trying to patch up party harmony, and he, therefore, determined to abandon his leadership, it was to MOMAX that he went to announce his determination, and it was to MOMAX that he shook his finger. It was almost always important to Democratic Senators to know how MOMAX was going, and what he was going to say. He never acted with the Republicans; he never forgot that he was a Democrat; and when he appeared in party he had the tact to convince people that he thought that he was a better Democrat than any one else in his party. He attended to his business as Senator with industry; he was conscientious without display; and he was devoted to his duty, and to his country, and this last even when he was a rebel. He always believed that he was an "ambassador" to Washington from Alabama whenever the rights of the State were in question; but, in the main, he was a Senator of the United States rather than a Senator from Alabama, which signifies, perforce at least, that the rights of the State were not often in question.

Georgia Day and the President at Jamestown

NORFOLK, VA., June 10, 1907.

GEORGIA DAY brought to the Jamestown Exposition the largest crowd it has yet seen, and such was the thrill and experience that it showed, too, an amazingly well-handled crowd. The difficulties of the later situation have been very great, and the closing up of the roads and lanes saved, two or three days before the great day, an impossibility. But over six hundred business men of Norfolk turned out Saturday and Sunday, lawyers, doctors, bankers, shop-owners, tradesmen, all were brothers in their need, and for two days they expended the energy of two or three thousand negroes, cleaning up the grounds and preparing for the coming guests. Jacob RICE, who was visiting in Norfolk preparatory to his address to the Editorial Association, was so moved by the sight that he spent Sunday in his shirt-sleeves walking at the grounds with the best of them, showing himself a man who is friend and patriot wherever he may be. The results were excellent, and on Monday (June 10) the Exposition grounds were orderly and beautiful, and two-thirds of the exhibits were in place.

Statesman or no statesman, the President is a picturesque personality, and for this crowd is always grateful. It cheered him to the ribs. The great and beautiful parade-ground was specked with people packed as closely as sardines in a box. One man lifted a pair of golden-haired twins on to his shoulders, and they waved wildly at their chief. The President is not a man to miss such an occasion, and he responded at once, waving the papers in his hand and commenting: "When I see a father with two on his shoulders, I have to respond, and twice expect special attractions, anyhow!" The President's address was as cleverly genial, as suited to his great audience, as was his greeting suited to the twins. He reminded his Southern audience that he had two miles in the Confederate army, but he added: "And I have old enough I should have fought on the other side." Whether or not he deserves the words of a recent dedication to him—

"Not honored only for far-seeing strength,
And wisdom when all nations gather round,
But for the man he is; he seems to glow,
A vivid fire of love that glows warm,

Enkindling, round about, the burning flame,
Think he could be glad to take the hand
And know the heart and labor in the life
Of every soul on earth; his eager mind
Enters in every cranny of men's lives,
And comes to succor and to understand."

he, at least, is of his own time and with the larger majority. It was Norcross who said that to be ahead of one's time was a crime, and that a man must answer for it. A part of President Roosevelt's great success is that he is all there at the moment; as hesitations, so far as vision, so recollections pulling backwards cur the full vitality with which he is present in the moment as it flows. And he was entirely present, bubbling with geniality and good humor and approval, throughout the day at Jamestown.

The Exposition has suffered a great deal at the hands of critics, many of whom have been but swill and casual visitors. It is fair to say that on Georgia Day whatever mistakes had been made before were repaired. The only *contretemps* in the ceremonies took place in the Georgia Building, when, owing to a miscount or to unexpected visitors, the President, who gallantly suggested that the ladies sit down first at the luncheon-table, was liberally himself excluded and obliged to stand. He stood throughout the luncheon, with his plate in his left hand, while he fed himself as best he might in the paces of hand-shaking with the crowd who pressed about him.

The parade-ground is large and beautiful, and was admirably adapted to the brilliant parade, one of the finest ever seen in the South.

The President made a point of visiting the negro exhibit, which is a very creditable one. At the Georgia Building a silver service was presented to the battle-ship *Georgian*, and was received by the President.

Perhaps the most joyful part of the day for the Chief Executive was his address to the Editorial Association in the afternoon. During it he frequently became a comedian with laughter at his own sallies that he stopped talking long enough to get himself in hand.

L. C. W.

Correspondence

"THE AMERICAN JOURNAL OF INTERNATIONAL LAW"

JANUARY PLAIN, MASS., June 11, 1907.

To the Editor of "Harper's Weekly":
Sir—In your issue of June 13, under Editorial Comment, a notice of the new quarterly periodical called *The American Journal of International Law*, but referred to by you erroneously as *International Law Quarterly*. In these days of many periodicals it seems ill advised to alter and shorten a title.

I am, sir,

F. W. FANON.

WASHINGTON AND A THIRD TERM

NORTHUMBERLAND, PA., May 10, 1907.

To the Editor of "Harper's Weekly":
Sir—In your issue of May 11, page 609, you speak of Washington as "opposed to a third term." May I ask your authority for this view? It cannot be his Farewell Address, so often referred to as sustaining it, for the whole tenor of that letter is in the opposite direction. He rejoices that the more settled condition of the country now releases him from the obligation to serve a third term. Gladly would he have declined even a second term had not duty to his country in her need forbidden him to consent his own preference for retirement; but now, at last, though still ready to sacrifice that personal preference and continue in the service of his country, he feels that he may, without violence to his patriotism, ask to be excused from a third term of office. "I rejoice," he writes to his countrymen, "that the state of your concerns . . . no longer renders the pursuit of inclination incompatible with the sentiment of duty or propriety. . . . I have the consolation to believe that public choice and prudent advice will write me to quit the political scene, patriotism does not forbid it."

Who can doubt that had a public need seemed to require it, Washington would have felt it a duty to accept a third term?

I am, sir,

H. D. CATLIS.

NEW YORK BUILDING AT JAMESTOWN FAIR

NEW YORK, June 8, 1907.

To the Editor of "Harper's Weekly":
Sir—In your issue of June 8 you publish a picture of the New York State Building at Norfolk, and print underneath, "The Condition of the New York State Building at the Opening of the Jamestown Exposition." If you will look into the matter you will find that the picture was taken some time before; there was no scaffolding about it at the opening, and the only things incomplete were the grounds and approaches, which the Exposition people agreed to do and did not, and held up the entire entry owing to lack of funds. This letter is not necessarily for publication, but I am sure you will be glad to be informed when you have done an injustice.

I am, sir,

CLARENCE LUCE, Architect.

A DEMOCRATIC PRESIDENTIAL POSSIBILITY

EDWARD WARD CARMACK

EX-SENATOR FROM TENNESSEE

By WILLIAM INGLIS

SPECIAL CORRESPONDENT FOR "HARPER'S WEEKLY"

COLUMBIA, TENN., June 25, 1907.

FEARLESSNESS is the dominant note in the character of Edward Ward Carmack. Life is for him one long and cheerful battle, full of hard knocks given and taken, and the hope of many lucky blows to come. This is not to be attributed to a pugnaacious or contentious disposition, for he fights because he has very clear ideas of what is right and wrong, and having made up his mind as to what is the right course on any question, he follows that course regardless of consequences. Often he wins, sometimes he loses, but, win or lose, he is ever ready for the fray. Native of the same soil as Davy Crockett, all that he asks is to be sure he's right, then he goes ahead.

The people of Tennessee like that kind of man, and now that he has come to the end of the term in the Senate of the United States to which he was elected in 1900, they are urging him to run for

There are in Columbia many hundreds of citizens who never refer to this man except as "Ed" Carmack. This at first strikes the ear as invogations, but the stranger soon perceives that the nickname is a tribute of affection, spontaneous, unthought; a token of brotherhood whose intimacy does not diminish respect in the slightest degree.

Here is a man of Scottish descent though American for four generations, nearly six feet tall, straight as a hickory sapling, full-chested as becomes an orator, clean-lined and of powerful grip, belittling one who has lived with out-of-doors. There is about him that atmosphere of abundant vitality which rarely leaves one who has had the good fortune to spend his boyhood in the country. He lacks the commonest artifices of the politician, for it is very difficult for him to remember the face of one he has met but a few times, and utterly impossible to recall unfamiliar names. He never was

successful by practice of the gentle art of hand-shaking. Nevertheless his is a personality toward which one warms intuitively, for it makes an impression of rugged sincerity quite in keeping with the man's reputation.

Left fatherless at an early age, young Carmack nevertheless determined to become a lawyer. To that end he went to the celebrated Culleoka School in Maury County.

"But I have no money," he said to Principal Webb, "and I will have to work to pay for my tuition."

"Never mind the work. Pay me when you run," Dr. Webb replied. And it may be recorded that soon after his admission to the bar of Tennessee, in 1880, young Carmack paid his tuition free in full. He practised law in Columbia, and without any solicitation or even recommendation on his part his friends nominated and elected him Justice of the Peace. In 1884 they sent him to the Legislature. He was editor of the Nashville American from 1886 until 1892, when he became editor of the Memphis Commercial. He was elected a member of the national House of Representatives in 1897 for the Tenth District of Tennessee. But not without a hard struggle on the part of Josiah Patterson, who appeared before the House and bitterly contested the election.

Mr. Carmack's speech before the House, in which the Republicans constituted a large majority, had much to do with his victory over the contestant. He asserted his rights and dominated them. For example, here are a few paragraphs from his speech:

"There is another and a higher tribunal which will review these proceedings and sit in solemn judgment upon your verdict. If this House shall decide against my right, to the arbitrament of that great tribunal I shall make my appeal. It is within the power of this House, by a mere act of force, to strip a member of his commission. It is not within its power to take from him the respect of his neighbors, his constituents, his friends. . . . I had rather lose this seat, having obtained it, as I believe, by the honest, un-bought suffrages of my constituents, than receive it as the gift of this House, having been denied it by my people at home."

"It has been said, Mr. Speaker, with great injustice, I hope, that every step in the trial of a contested-election case was a mockery of law and of legal procedure; that at last the question is decided upon considerations of party interest or of party prejudice, and that all these tedious and costly proceedings are but

Ex-Senator Carmack and his Son at their Home in Columbia, Tennessee

Governor. Yet neither the likelihood of winning that honor nor the possibility of being the next President of the United States has thus far swerved him from the plan he had fixed before leaving Washington—to write and lecture and thereby acquire a more plentiful income for his family. He is not rich in this world's goods, and he is averse to the idea of seeking the Presidency, perhaps having in mind the historical fact that all those statesmen who put up the tallest lightning rods and tried most audaciously to attract the vivid current of popular favor sat for many years unfulfilled and ended their days still hoping against hope.

It is not easy to reconcile the idea of grave and reverend Senatorship with such a man as Carmack, full of the vigor and elasticity and enthusiasm of youth. His thick shock of reddish-brown hair shows more suggestions of gray at the temples, his blunt mustache is untouchable of time, his steady blue eyes are clear and bright as a boy's. Yet if he lives until the fifth day of next November he will be forty-nine years old. His quick step, muscular restlessness, unflinching energy, bespeak the quality of youth no less than his alertness to study new problems and accept new truths.

barren and empty formalities, the mere husks and shucks of the law, in which there is no kernel of justice and no grain of right.

"If I should assume, Mr. Speaker, as I do not and shall not, that the dominant party in this House would be controlled by such considerations, that it would be influenced by some sense of political obligation, incurred, that it would be governed by the absurd and preposterous belief that a political or party advantage is to be gained by seating this contestant, then I should have to admit that I have nothing which I can oppose to such a motive. I must frankly say to this House that in the last campaign, with all my heart and soul, I supported the nomination and the platform of the Chicago convention. [Applause on the Democrat side.] I expect to do the same thing in 1908. [Renewed applause.]

"Politically speaking, there is not and can not be any common ground between myself and the majority of this House. I cannot come to you and say that in the last campaign, while I publicly proclaimed myself a supporter of the regular Democratic organization, I was secretly false to my public professions. I cannot appeal to you on the ground that, while I was a Democrat every day, I was a Republican every night. I cannot appeal to you by saying that, while I proclaimed myself a supporter of the Democrats at the front door, I was for McKinley in the back alley. [Laughter.] A man cannot be the kind of a Democrat I am, Mr. Speaker, and aid the Republican party any more than he can be the kind of Republican you are and aid the Democratic party.

From the House Mr. Carmack was sent to the Senate. There he vigorously opposed the acquisition of the Philippines as unwarranted and fraught with danger. The declarations of the late President McKinley were at that time invoked by a Senator favoring the taking of the Philippines.

"Undoubtedly," Senator Carmack replied to his interrupter, "what President McKinley proposed was 'benevolent assimilation,' but the present policy is 'malevolent dissimulation.'"

Senator Carmack opposed the acceptance of the Canal Zone from the newly created Republic of Panama. He supported President Roosevelt in his summary discharge of the negro troops for rioting at Brownsville, though in the debate he said:

"Provided Roosevelt must fight the course; and I say to Senators from the other side of the Chamber, you must take your al-

The Cup presented to Senator Carmack by his Constituents upon the Expiration of his Term in the Senate, March, 1907

for a few days at his home, where with his wife, who was Miss Elizabeth Cobey Huntington, he dispenses charming hospitality.

Next to Edward Ward Carmack, junior, now eight years old, the most valued possession of the family is the handsome silver loving cup lately presented to the Senator by thousands of his constituents. On it is inscribed:

"A Statesman and a Nobleman."

"He would have been an ornament to British Parliaments that knew Burke and Fox and Pitt. He would have been distinguished by American Senators that contained Clay and Calhoun and Webster. He might have been rich. He had but to sleep. . . . But in the true sense who dare to say this American Senator is poor? Who is the man who does not respect him? All the wealth of earth would not buy for the base his lofty character, his unblemished honor.—The Washington Post, February 2, 1907."

Next door to the Carmack home stands the ancient home from which James K. Polk more than half a century ago was summoned to the Presidency. Transcendence say there is property in this.

WATCHWORDS FOR DEMOCRATIC SUCCESS

By EX-SENATOR CARMACK

To regala people the Democratic party must be courageous and Democratic. It must be brave enough to say what it thinks, and brave enough not to say what it does not think. Boldness is the wrong is stronger than timidity in the right. The party that has the audacity of its wickedness will triumph over the party that has not even the courage of its convictions.

The time is ripe for the renaissance of the Constitution, and therefore for a campaign that will present the fundamentals of the Democratic faith.

A strict—or let us rather say an honest and faithful—construction of the Constitution, which, being interpreted, is, "the support of our State governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwark against anti-Republican tendencies.

"The preservation of the general government in its whole constitutional vigor, as the sheet-anchor of our peace at home and our safety abroad."

To resist with the utmost energy every unconstitutional extension of Federal power as against the States, and of the executive power as against other departments of the government.

In our foreign policy to keep well within the "shadow of our rock of safety," the councils of Washington and the maxima of Jefferson.

To cast out the devil of militarism from the councils of the nation and the hearts of the people, and to put aside all dreams of conquest and colonial empire.

To make legitimate use of all the powers of the Federal government to suppress monopoly, but so as not to give countenance and support to the despicable monopoly of all—the monopoly of power in the government at Washington.

Rigidity to regulate and restrain the great railroad corporations, which, being natural monopolies, have a power of oppression no greater to leave unchecked—but disclaiming any sympathy for the policy of government ownership of the railways.

To institute a wage economy in public expenditures.

Resolutely to set about a reformation of the tariff with the ultimate purpose to make revenue the only object of taxation.

Such, it seems to me, should be the policy of the Democratic party, and such should be the issues of the next campaign.

It is easy to give particular point to these generalizations. The policy of the Republican party has always tended to centralization,

but the present administration has been exceptionally open, extreme, and vociferous in its manifestations. The country is familiar with the manly inspired utterance of Secretary Root in which he proposed to strip away the rights of the States by judicial interpretations in order to give the administration ample room for the sport of its universal activities. It ought to alarm every friend of the Constitution and shock the conscience of every man whose morals are not utterly depraved. Secession could not be more fatal to the Union than consolidation, for the States will cease to be united when they have been absorbed.

The usurpations of the present Chief Executive have been frequent and reckless, and through it all he has had the support of his party. In the Panama affair he committed acts of war against a friendly nation without authority, thus violating a vital inhibition of the Constitution. By the same act he violated also international treaty, and statute law. He put into operation a treaty which the Senate had refused to ratify, and a pension law which Congress had refused to pass.

The administration's action in the California school matter was at once a revelation of its contempt for the State and of the weakness of its brainpower foreign policy. It was an open secret in Washington that it was Japan's jealousy of our intrusion in Asiatic waters that disposed her to bad cause of quarrel. Even if it had tried to do so the Federal government could not have bargained away the reserved rights of a State; but in this case there was not a shadow of foundation for the Japanese claim. Yet the adminis-

tration fell into a panic, permitted Japan to have her own interpretation on the treaty, and then it bought a free State, by force of military force, into a surrender of her right to regulate her domestic affairs. Such are the first fruits of our foreign policy, arising to a truculent foreign power and a deadly blow at the right of local self-government, with the result of making the peace in question only more transient and laying the foundation for the false interpretations of treaties. Republican leaders could propose a revision of the tariff to remove some of its abuses; but no pruning of a corrupt tree can make it bring forth good fruit. It is in the nature of a system founded on rapacity and inequality to multiply its injustices, and no party can believe in such a policy can be trusted to reform it. Reform should be reformed not by a pruning-knife in the hands, but by an axe at the root. The Republican party proposes that the tariff shall be revised by its friends. The Democratic party demands that the taxpayer shall be taxed by his friends. I submit that even a vicious policy that has rooted in the industrial system of the country cannot be destroyed at a blow without danger of catastrophe. Free trade in England was not attained by sudden flight, but by the gradual elimination of protective duties, each step justifying itself and giving confidence for the next. The Democratic party should move gradually, but steadily, toward its goal of a tariff for revenue alone—a tariff that will afford the largest possible proportion of revenue with the least possible protection.

Royalty's Golden Wedding

KING OSCAR II. OF SWEDEN, AND HIS QUEEN, SOPHIE, CELEBRATED ON JUNE 15 THEIR GOLDEN WEDDING. THE KING IS SIXTY-THREE YEARS OLD; THE QUEEN WILL BE SEVENTY-ONE IN JULY. THEY WERE MARRIED WHEN EDWARD VII. WAS A BOY OF SIXTEEN.

A Legislative Veteran

AFTER THIRTY YEARS SERVICE IN THE UPPER HOUSE OF HIS COUNTRY, JOHN MORGAN, SENATOR FROM ALABAMA, LAST WEEK IN WASHINGTON, WITHIN NINE DAYS OF HIS SEVENTH BIRTHDAY. HE WAS BORN AT ALEXANDRIA, VIRGINIA, JUNE 20, 1824.

WHAT WOMEN DO FOR A LIVING

THAT the four million women workers in the United States are engaged in no less than 292 distinct occupations will be surprising news to some. No women, naturally, are reported as United States soldiers, sailors, or marines; nor were any reported as members of the fire department, or as street-car drivers (though two were reported as motormen), or as telegraph and telephone linemen, or as apprentices or helpers to rosters and slaters, or as helpers in dress-halter makers or to brass-workers. But the reader may note with interest, and perhaps with some astonishment, that 5 women are employed as pilots; that on steam-railroads 10 were employed as baggage-men, 31 as brakemen, 7 as conductors, 45 as engineers and firemen, and 28 as switchmen, yardmen, and flagmen; that 43 were cartmen and hack drivers; that 4 were reported as ship carpenters, and 2 as rosters and slaters; that as many as 165 were returned as blacksmiths, and 508 as machinists; that 8 were bell-founders; that 31 were charcoal, coke, and lime burners; and that 11 were mill-helpers. Of course these figures have little economic or sociological significance beyond indicating that there are few kinds of work from which the female sex is absolutely barred, by either nature, law, or custom. There were 125 occupations employing over 1000 women each, and 63 employing over 5000.

Notwithstanding the increasing diversity of employment for women, domestic service still remains the most important of the occupations in which they are engaged. Of the 4,870,000 women in continental United States reported as engaged in particular occupations at the time of the Twelfth Census, 1,112,000 or almost one-fourth of the total number, were returned as servants. It may seem surprising that the next most important occupation for women is that of farm laborer, and that the number of women reported as following this occupation was 454,000, or about half a million. The significance of the figures will be better understood if it is pointed out that 442,000, or 97.8 per cent., of these farm laborers were reported from the Southern States, and that 361,000, or 79.5 per cent., of the total number, were of the same race. Moreover, 31 appeared that 277,327, or 61.5 per cent., of the total number, were members of the farmers' families, representing the wives and grown-up daughters assisting in the work of the home farms. Next to these two leading occupations come just occupations not far apart in numerical importance, though with different in character. They are the occupation of dressmaker, laundress, teacher, and farmer. The largest of these occupations—that of dressmaker—employed 238,184 women and the smallest—that of farmer—employed 307,766.

RICHARD CROKER, DERBY WINNER

THE ONE HUNDRED AND TWENTY-EIGHTH RUNNING OF THE ENGLISH DERBY, THE MOST FAMOUS AND MOST COVETED HORSE RACE IN THE WORLD, WAS WON AT EDDING BOWNS, ON JUNE 5, BY RICHARD CROKER, EX-CHIEF OF TAMMANY HALL, WITH HIS THREE-YEAR-OLD COLT "ORBY." "WOOL WINDER" FINISHED SECOND, AND "BLISS GALLON," THE FAVORITE, THIRD. MR. CROKER IN THE THIRD AMERICAN RACE OF THE WEEK, FORTHE LORELLAND HAVING WON IN 1881, WITH "BRANDON," AND WILLIAM F. WHITNEY IN 1881, WITH "VOLVOVANSKI." IN ITS SOCIAL ASPECT, MR. CROKER'S VICTORY DID NOT ALTOGETHER APPEAL TO THE BRITISH ARISTOCRACY.

THE DRAMATIC CENSORSHIP IN ENGLAND

*By W. G. FITZ-GERALD

Lord Althorpe, Lord Chamberlain of England

WITHOUT THE SANCTION OF THE LORD CHAMBERLAIN NO PLAY MAY BE PRODUCED IN ANY THEATRE IN GREAT BRITAIN

NEVER since the evil day when Walpole established the Dramatic Censorship in England, to prevent Fielding from exposing the corruption of Parliament on the stage, has the British Lord Chamberlain and his Examiner of Plays been placed in so embarrassing a position as that which recently resulted from the sudden ban on *"The Mikado."*

The classic Gilbert and Sullivan opera was licensed more than twenty years ago—long before any Anglo-Japanese Alliance was dreamed of. That being so, it was more difficult to raise any objections for no exception is ever taken once a license has been issued save where questionable additions have been made. In any event, however, the episode has dealt a severe blow at an institution considered on all sides to be archaic and absurd.

An amusing incident which would seem to heighten the absurdity of the entire affair occurred recently at Chatham, where the Japanese war-ship *Fusatake* was lying. When Admiral Sir Gerald

Noel, with the chief military and naval officers of the station, was entertained aboard the Japanese man-of-war, although these officers had issued imperative orders that their hands should not play any of the *"Mikado"* music, it was with selections from this very opera that the band of the Japanese ship regaled them.

The British Admiralty has since reversed the ban fine on the *"Mikado"* music, and has notified the naval bands that they may play it again.

Lord Althorpe, the present Lord Chamberlain, receives \$10,000 a year, and his Dramatic Censor or Examiner of Plays, Mr. George A. Redford, about \$4000. The Censor is a permanent official of the Lord Chamberlain's office. Mr. Redford has now held the post for several years; having also advised his chief's predecessor, the Earl of Clarendon.

The law says that one copy of every new play, prologue, or epilogue, or addition thereto, intended for production in any theatre in Great Britain, must be sent to the Lord Chamberlain's office in St. James's Palace at least seven days before it is first acted, and he may refuse a license if he considers it fitting for him to do so. Nor is there any appeal against his decision. The Examiner of Plays is the one authority in the three kingdoms. He has absolute power, without restriction, to destroy the property, and in some sense to damage the reputation, of a certain class of his fellow citizens.

The penalty for disobedience is severe. Not only is a fine of \$250 levied on any person who presents a piece either before it has been licensed or subsequent to its being vetoed, but the house of the theatre where it is presented is entirely withdrawn and the building closed. Further, any one who gives information about an unlicensed performance is entitled to half the fine of \$250.

Five and a quarter dollars is the charge made for licensing a one-act play, and ten and a half for two acts or more.

The institution has been fiercely attacked ever since it was established. The late Examiner of Plays, Mr. E. F. Smyth Pigott, was contemptuously referred to by playwrights and critics as a "walking compendium of insular prejudice."

"I have studied Ibsen's plays pretty carefully," this Censor used to say, "and all his characters appear to me morally degraded. All the heroines are discoloured spanners who look upon marriage as a monopoly, and as for the men, they are all rascals or imbeciles." Moreover, this remarkable critic declared he had licensed Ibsen's dramas simply because he thought them "too absurd to do any harm."

For many years the British Dramatic Censor has been far from a brilliant personality. One critic of his described him as "a well-connected mediocrity turned into the Tsar of the theatre, and able to do things which no Prime Minister dare do." According to the official estimate of the Lord Chamberlain's office, in ninety-eight out of every hundred plays submitted, no question of morals is raised at all. The Censor has nothing to do but read the drama, pocket his ten dollars fifty, and duly license the performance.

The present holder of the office, as is well known, absolutely refused to license *"Mamma Vassia,"* *"Odipus Rex,"* *"The Centurion,"* as well as *"Ghosts,"* *"Mrs. Warren's Profession,"* and *"La Citta Morta."* But not one of these raised the uproar raised by the official veto put upon the ever-delightful *"Mikado."*

It is certain, however, that an influential body of public opinion is in favor of the institution. "Abolish the Dramatic Censorship," say these, "and you exchange the opinion of an intelligent and unbiased individual for that of twelve jurymen. And then where are you? Can green-grocers decide a delicate artistic question? Or is the Director of Drury Lane to be summoned first to Bow Street and afterwards to the Old Bailey to discuss the length of his ballet girls' skirts?" Other humorous pictures were drawn of Sir Charles Wyndham, George Alexander, and other actor-managers arguing the propriety of their low comedian's jokes before a stolid jury of John Bull—all hurrying to prove their moral sympathies to a Puritan world!

THE FALL OF THE FAKIR

By JOHN KENDRICK BANGS

OH I am a bold Nature Fakir,
With a bubbling fountain pen,
I write up the boasts of my Maker,
And tell what they ought have been.
I've told strange tales of Pink Monkeys
Who talked over a telephone;
And yares of green-violet thebeys
I've met in the Torrid Zone.

My story of "Curly the Box,"
Who sat on a Scagway Links,
And hatched out some twenty-four
Small coddies with black woolly kinks,
Is now in its hundredth edition,
And makes other Naturals blue.
Although, I must make the admission,
It isn't quite all of it true.

The yarn that I told of the Leopard
That ate up a whole flock of geese,
Then wringing went up to the Shepherd
And offered to call the Poli e,

Has covered me over with glory,
And sold like a grabber of oil,
Though in Paris that most wonderful story
Wasn't written according to Hoyle.

And then my great tale of the Howler
That fought with the Elephant Queen,
In seventeen hard rounds induced her
To flee the sanguineous scene.
Filled millions with marvellous wonder
At thought of such streamless nets,
Though Naturalists rent me asunder
For carelessly using the facts.

But now I am filled with repining,
With worry and trouble and fear,
The President's ripped the gold lining
From out my brilliant career.
He's sent me a Lesson so mellow
It's laid me out fright and fat,
And worst of it all though it's yellow,
It's not a real wound at that.

He could hear the men panting as they staggered on

THE CHARGE

By CAPTAIN M. B. STEWART, U.S.A.

DRAWINGS BY HENRY RALEIGH

THE regiment trailed slowly out of the woods and pushed steadily to the front until a crashing volley tore its way through the ranks and spread it in a long line of scrambling skirmishers to the left of the road, where it lay panting, hidden under the shelter of the jungle's edge. For a time the boy, crouching behind the line of his company, waited patiently for the command to advance. An aide riding to the rear shook his head in answer to the boy's inquiry.

"Don't know," he called over his shoulder. "Support, I reckon." When the first excitement had died away, the boy rose and wandered aimlessly up and down the line of his company, slashing among the weeds with his sword or pointing and thrusting at imaginary adversaries in the brush. Occasionally he stopped to observe a colony of ants at the foot of the mango-tree in rear of the centre.

The hissing whine of a bullet, lower flying than its mate, recalled him to the work at hand, and he glanced inquiringly to the

right, where his captain stood peering steadily through his glasses to the front, then resumed his trudging down the line, wondering impatiently when it would begin.

Slare down the guns of the battery on the hill in the rear had harked with monotonous regularity, punctuating the increasing war in the valley below with spirital cracks which rolled out over the little town to reverberate thunderously from the hills beyond. On the heels of each came the gasping rush of air and drizzly swish which marked the flight of the long, thin projectile. From all sides came the rattling, stinging spat of rifles and the crash of volleys, which tore through the tangled jungle growth, heaving and tossing in the storm of death, its stern rebelling to the clacking of bamboo and the swishing of anguished foliage.

To the boy it was merely a prelude, long drawn out and monotonous. A touch on the shoulder had awakened him from his soggy blankets to fumble in the darkness, and stumble numbly along in the wake of his company in the first grisly streaks of dawn. The opening gun from the battery and the first rounds from the infantry in the valley below had stung him into prickling consciousness and eager expectancy which two hours of halting progress and waiting in the stifling sultriness of the jungle had dispelled.

With wearied patience he turned once more to the anti-hill. One patient fellow labored persistently to expel from his home a particle of mountainous proportions. Three times he bent himself and essayed to thrust it from his door, and each time he fell back under its crushing weight. With infinite care the boy stooped, and with the tip of his sword rolled away the obstruction, careful not to disturb the weaker, then turned to resume his march up and down the line. The men lay silently in place, some with hats pulled down over their eyes, sleeping peacefully; others with nervous care examining their bandied rifles over and over again; others, gazing into space, waited patiently, as he was waiting, for the supreme moment.

A hand on his shoulder aroused him a second time to a consciousness of his surroundings, and he turned to look into his captain's serious eyes. He noticed that the rugged and stubbly bearded face was tense and pale, and that now lines had cut deep furrows about the kindly mouth.

"We are to advance now, boy," he said. "We go on in the left of the Thirty-third, straight to our front. Now that the men are ready for the signal." Then he added, as the boy saluted and moved away: "Don't let them bunch during the advance. Keep them well deployed."

The men had calked themselves to their elbows, each with an eye alert for their captain's signal. When it came, they noiselessly adjusted their equipments, and shook themselves into their belts for the ears across the open.

From the left of the line came a thud which told its tale even to the inexperienced ears of the boy, and a man fell in his place, to the writhing on the ground, his desperate eyes staring upward at the patch of blue between the tangled vines. The boy shuddered and turned away. There was another thud, this time nearer, and a sergeant beside him clasped his hand to his side and sank with a stifled moan to his knees. The men in ranks

Drawn by Henry Raleigh

"You heard that command. Why didn't you move?"

shifted uneasily, staring helplessly at their fallen comrades.

A sickening nausea possessed the Boy. The world swam before his eyes. His head throbbled with the hammering clang of blood from his palpitating heart. In front of him, his company moved to the open, gathering its paces with each step for the dash before them. His own legs shared the paralysis of his panic-stricken brain. From his hand dangled the sword bequeathed to him by a father who had sheathed it in honor.

As though seeking flight, he stared desperately about him, behind a bush, his face distorted with the fear he did not try to conceal, crouched a man of the company. As he looked at him, the Boy's fear was lost in sudden anger. This man was disobeying orders deliberately; he had heard the command and had not moved. The habit of discipline ingrained obscured the Boy.

"You heard that command," he screamed. "Why didn't you move?"

The reply was a snarl of frightened rage, and the Boy drove his fist into the livid, quivering face.

"Get up, blast you!" he panted, choked with anger, and dragging the skulker to his feet, drove him before him out of the breach.

Out in the open, the ground around them puffed in a hundred places, spurring dust into their faces. The sun beat mercilessly down upon them. Heaving perspiration blinded them with its brine. Here and there a man stumbled and fell, to struggle to his knees and fall again. Near the protection of a hillock one slackened his pace, and the Boy roared angrily at him. Down the cheeks of another tears flowed unrestrainedly, and the Boy, running by his side, cursed him for a coward. Another swore with pain and rage, but still stumbled on, and the Boy's heart softened sympathetically. "Good for you, Kelly!" he cried to him.

Half-way down the stretch a volley crashed through the line and for an instant it wavered.

"Go on! What's the matter with you?" the Boy yelled at the faltering man. "Go on!" Then, leaping ahead of the waverers, he called back, "Come on, then, damn you! Come on!"

There was but one thought in his mind now as he sped down the burning stretch; one consuming, instinctive desire possessed him: "Oh, oh, for God's sake, on!" until he could seize that silent foe by the throat and choke out the life which sought his own. His fingers ached with straining at the thought, his muscles throbbed and seethed in anticipation. But blood surging through his brain hammered the ceaseless refrain. "On, on, for God's sake, on! Why are you so slow?"

Somewhere, the Boy was dimly conscious that hughes were blowing, commands were being shouted, and men were cheering hoarsely. Behind him he could hear the men pausing as they staggered on deeper and deeper into the hell, but closer to the foe. At last there rose before his straining eyes a line of pallid men who loaded and fired at him with dogged persistence.

"Ah, there you are, are you?" and he reached out his hands to grasp their bared throats over the intervening space. Ah, God! would he never reach them! His feet seemed leaden, and he cursed them in his mind for holding him back from the line of throats.

Hah! That went home, and that, and that, and that, and that, and with the strength of fury he hurled the clicking weapon in a frightened, upturned face. Around him, men thrust and clubbed, and the thrusts and thumps mingled with hoarse panting and shuddering gasps.

Again, he heard the hughes smothering. "What? Beval? Surely—"

The men stood in silent groups, heaving panting upon their rifles as they mopped their burning faces and gazed about them with dazed incomprehension. Off to the front scattering shots and the shrill hughes of the cavalry told of the pursuit. The charge was over; the price of victory lay in silence on the burning

Around him men thrust and clubbed

Drawn by Henry Sargent

field behind them; the cost of defeat lay crumpled in the trenches at their feet.

The Boy raised his sword to return it, and the sight of its crimsoned blade brought back all the sickening horror which for the moment he had forgotten, and he knew himself once more for what he was. He knew why he had struck the quaking devil behind the bush, why he had cursed the wavering line and had rushed raving ahead of it. The brick-red color surged up into his face. He had shown it to the men and they knew. Doubtless they whispered it among themselves.

Yellow! Yes; that was it. He was yellow, and he knew it.

Dimly he saw his captain coming slowly down the line. His eyes smarted and burned, his gorge rose and choked him, and he tried dumbly to pray that he might be spared the sting of his captain's reproach. With downcast eyes and beating heart he waited for the humiliation that was to come, and then, faintly rising above the surging roar that drummed in his ears, he heard his captain's voice.

"Thank God, my boy!" the grizzled veteran cried. "I'm proud of you. You're a young man. Why, damn you, Boy, you're all right. You led that charge!"

Drawn by Henry Sargent

"I'm proud of you. You led that charge!"

EUROPE'S UNLIVING COUSINS-ROYAL

WHY ENGLAND AND GERMANY HAVE GOT ON EACH OTHER'S NERVES

By SYDNEY BROOKS

LONDON CORRESPONDENT FOR "HARPER'S WEEKLY"

London, June 5, 1907.

A PARTY of English journalists, containing two or three who are in the very front rank of their profession and who belong to the best type of English politics, is at this moment touring through Germany on a mission of international goodwill. They appear to be having a thoroughly good time. Royalty itself could not be expected to cover more ground, to inspect more centres of industry, to attend a greater number of banquets and receptions, to be more persistently arched and lionized. To-day's papers, for instance, report that they have not only witnessed a parade of the Potsdam garrison, with the Emperor himself leaving the Cuirassiers of the Guard, and three of his sons figuring among the officers, but have also been entertained at luncheon by the Kaiser in his own intimately facile and felicitous fashion. It is very clear, indeed, that all Germany from the highest to the lowest has been at unwavering pains to make the visit as pleasant and as distinguished as possible. The compliment to the profession is one to which no journalist who takes his work seriously can be inexcusable.

But it is rather from the political point of view that a pilgrimage of English editors to Germany, in the present state of Anglo-German relations, has to be considered. I do not recall anything in history quite like the highly-charged atmosphere of suspicion and mutual irascibility that exists between the peoples of these two countries. They are engaged in what has all the appearance of being a perpetual battle of *tu quoque*. Each nation, or at least a considerable and voracious section of each nation, seems to regard the other as the bête noire of European politics. Germany cannot add a ship to her navy without a score of English journals proclaiming at once that "Belanda not Germania" must be the motto of British policy. King Edward cannot take a Mediterranean holiday without sending a shiver of alarm through the German people; a majority of whom quite honestly believe the King to be an arch-intriguer against Germany's security, and a sleepless contriver of anti-German plots and coalitions. The English Prime Minister cannot make a very tentative and modest proposal for the limitation of armaments without rousing in Germany a ferocious conviction that another British campaign against the Fatherland is on foot. Everything that happens that in any way affects the international position of England or Germany is seized upon and distorted and given an anti-British or an anti-German point by the press of both countries. A third-rate German politician makes an Anglophobe speech; his words are served up next morning piping hot on every English breakfast-table. An insignificant London rag prints a savage anti-German editorial; by evening-time all Germany is reading it. The third-rateness of the politician and the insignificance of the journal are trifles it is not thought worth while to explain.

It is in this way, as much as, if not more than, in any other, that Anglo-German relations have been wrought up into their present state of irrational animosity. The two peoples glare at one another across the North Sea amid an endless multitude of recriminations. Each seems to be convinced that the other is only waiting for its chance. Each is hilling into the deplorable habit of speaking of a war between them as "inevitable." Each is developing that neutral condition in which reason and probability cease to count. Each has on hand a ready-made and portentous list of acts of hostility and bad faith which it huris at the other's head. And what is most curious, and from some standpoints most disquieting, is that in all this waste of controversy neither side seems able to fasten on anything definite and tangible to quarrel over. The content is not one of facts but of possibilities. It is not so much taken up with what has happened or with what is happening now, as with what may happen in some unspecified future. England and Germany, in short, have got on each other's nerves, and from fighting blows of the tongue inventors they are getting within measurable distance of fighting one another. Yet I think I am well within the truth in saying that the two countries are separated by no tangible dispute, or at any rate by no dispute that concerns themselves alone. Such differences as keep them apart are, in the main, differences that have not come to a head, and may never do so. They are differences of underlying tendencies. But whether these tendencies are working along parallel or upon converging lines, whether they will proceed side by side or meet at some point and furiously clash, only the future can decide. And so attempt to forecast the future can produce and to make it the basis of present-day enmity seems to me a work of unmitigated folly.

All Englishmen feel that it would be better for England if she had more of the German feel in her blood, her policies, her administration, her instinctive way of looking at things. Even those who suspect the aims and drift of Germany's diplomacy admit her as an object-lesson in organized and microscopic efficiency, gladly acknowledge that any nation might envy her the possession of so inspiring a ruler as the Kaiser, and do not attempt to conceal their profound respect for the qualities of intellect and character that in less than a century have converted a congeries of petty, quarrelsome, discolored, and wholly lifeless States into a powerful and United Empire. There is, no doubt, much in the form and

spirit of the German government that acher Englishmen dislike, but they sensibly conclude that if Germany is satisfied with the general structure of her policy it is not England's business to be dissatisfied. They do not feel called upon to "litterature" Germany or to agitate for the videm of the German Foreign Office. As the first naval Power in the world, they are interested in the growth of the German navy, but they have no more idea of attempting to limit that growth than of demanding that Russia should thin her land forces. It is perfectly open to Englishmen to believe that Germany's naval ambitions are, and in the nature of things must be, the greatest danger that menaces the British Empire. But as they cannot prevent Germany from building ships, and as mere railing is senseless, ineffectual, and ungalvanized, the best policy for Great Britain is surely to maintain her relative superiority at sea with as little noise or fuss as possible, to reinforce that superiority by diplomatic agreements, and to treat Germany on that footing of present-day friendliness which is perfectly compatible with the suspicion or the conviction of future enmity. (Hungary and Italy, it is worth remembering, are not merely friends but allies on a much more slender basis than that, and even though it be a fair surmise that the German navy may one day serve as a spear-head for an anti-British coalition, so remote a possibility, and one that is equally applicable to all navies, ought not to disturb English opinion at the present day or to determine the whole trend of Anglo-German relations.

Yet if Anglo-German ill-will can be explained by reference to any specific cause, the first of those causes is that Germany is becoming, as we have heard, a strong naval Power. I do not attach very much importance to the commercial rivalry of the two peoples as a factor in promoting bad feeling. Commercial rivalry becomes only a grievance when popular feeling is otherwise inflamed. The English will continue to be the friends and allies of Japan even when Japan has become the greatest competitor in the markets of the Far East, and imports and exports enter into no Englishman's attitude towards the happy relations that obtain between his country and France and the United States.

A far more serious and actual cause of Anglo-German mistrust lies in Germany's attitude towards France and towards the entire *continent*. England and France have entered into certain mutual arrangements that make Anglo-German relations very much dependent on Franco-German relations. Sir Edward Grey, when he accepted the portfolio of Foreign Affairs, laid down that an Anglo-German rapprochement was possible; "provided it be clearly understood that nothing we do in our relations with Germany is in any way to impair our existing good relations with France." From this proviso he proceeded to deduce the general thesis that the condition of any improvement in Anglo-German relations must be that "the relations of Germany with France, on all matters that come under the Anglo-French agreement, should be fair and good also." By these declarations both the government and the English people still stand. There is no desire among Englishmen, in spite of a good deal of wild talk, to give an anti-German point to British diplomacy. There is, on the contrary, a consciousness that while England and Germany are estranged the position of France is made harder and not easier; and there is a strong wish that Franco-German rivalries, for the sake of all three Powers, might be rearranged on a basis of confidence and equality. Friendship with France has come to be the pivot of England's European policy, and the Power that is unable to accept that friendship, and to conform with it, necessarily hares itself out from the complete good-will of this country. When France and Germany come to terms, England and Germany will not be long in following suit.

Here, possibly, is the one real obstacle to an Anglo-German understanding. The other obstacles are the product of imaginative guesswork. There are Englishmen who maintain that looking to Germany's past and to her present strength and needs, it is impossible to regard the era of German expansion as definitely closed, or to feel absolutely certain that it may not be prolonged at Great Britain's expense. Germany, they say, is passing from a mainly agricultural to a mainly industrial state. She is building a powerful and cohesive fleet. She needs colonies to receive her surplus population. It would therefore, they argue, be only natural if her ambitions and necessities were to cause her to look with a certain hostility upon the Power that possesses all that she is striving for, and they proceed to enumerate in detail all the unfriendly actions which the German government has committed in the last fifteen years or so. There may, I do not deny it, be something in that argument, though it is easy to carry it too far, and it is certain that the same process of reasoning, pushed to the same extremities, would make it well-nigh impossible to find any two Powers to live together in peace. A good many Englishmen are coming to see this and are beginning to wish that a halt could be called in the anti-German campaign. I fear that their wishes are in the way of fulfillment, and that the campaign is years before it will come to its end. England and Germany may be friends, with a friendship tempered by a mutual and wary vigilance. Even that would be a great improvement on their present relations.

THE SINKING OF THE BATTLE-SHIP "MINNESOTA'S" LAUNCH IN WHICH SIX MIDSHIPMEN AND FIVE SAILORS, ALL WHO WERE ABOARD LOST THEIR LIVES IN HAMPTON ROADS

Copyright, 1901, by the Jamestown Official Photograph Collection

THE LAUNCH WAS RETURNING LATE AT NIGHT TO THE "MINNESOTA" WITH THE PARTY OF OFFICERS WHO HAD ATTENDED A BANQUET AT THE JAMESTOWN EXPOSITION. IN DEFECT OF ACTUAL KNOWLEDGE, IT IS SUPPOSED THAT THE LAUNCH HAD APPROXIMATELY A TOWING HAWK IN THE DARKNESS AND WENT UP THE TIDE. THE LOST MEN WERE MIDSHIPMEN PHILIP HENRY FIELD, MIDSHIPMAN HERBERT L. HOLMES, MIDSHIPMAN WILLIAM B. STEVENSON, MIDSHIPMAN W. C. TILLEY, OF THE "MINNESOTA," MIDSHIPMAN F. P. HOLCOMB OF THE BATTLE-SHIP "CONNECTICUT," AND MIDSHIPMAN HENRY CLAY MURFIN OF THE BATTLE-SHIP "KOWA," AND JESSE E. CUNN, COAL-PASSER; G. W. WESTPHAL, FIREMAN; AND SEAMAN S. B. DOWNS, F. H. PLUMMER, AND H. L. VANNUEN, ALL OF THE "MINNESOTA." AT THE TIME OF WRITING ONLY FOUR BODIES HAD BEEN RECOVERED, THOSE OF MIDSHIPMEN FIELD, STEVENSON, AND HOLCOMB, AND FIREMAN WESTPHAL. THE PHOTOGRAPH SHOWS THE WRECKED LAUNCH RAISED FROM THE BOTTOM.

THE SEARCH FOR A NEW MOTOR FUEL AS A SUBSTITUTE FOR GASOLINE

THE advance in the price of gasoline, due to the more general use of motors for pleasure and commercial purposes, and the certainty of an increasing demand because of the immense development of the motor industry, have led to efforts, in England, to find a suitable substitute for this fuel. Then there is apprehension that gasoline may be raised more in price than is legitimately justified by its greater use, because motorists are so dependent upon it. As possible alternatives or substitutes, crude petroleum, paraffin, kerosene, shale oil, benzol, alcohol, and acetylene are mentioned. Some of these, though non-suitable for use alone, are said to give better results when combined with another hydrocarbon.

Crude petroleum is regarded as unsatisfactory because of its heaviness, except in specially designed engines, such as are not now generally in use. Paraffin, though efficient and powerful, is held to be objectionable because of the difficulty of starting up so engine from the cold, and because the oil has a tendency to creep over the motor and injure its contents. It appears, however, that the use of a small amount of petrol makes paraffin more adaptable, but this can be advanced in price as easily as petrol if it should come into use as a motor fuel. Shale oil is obtained from a bituminous shale found in the coal of the Midlothian district. Though it is said to have good results, the supply is comparatively small. Acetylene has been used successfully when combined with paraffin or with alcohol, and when water is injected into the cylinder of the engine during the firing stroke. It is feared it will be found

too costly under present conditions of manufacture, but it is argued that a tendency to use acetylene might easily result in reducing the cost of manufacture; used by itself it is thought to be likely to strain and damage a motor engine, through the great force of its explosion.

Alcohol and acetylene have been combined experimentally for motor fuel purposes with some degree of success, but the difficulty is so ascertaining what should be the relative proportions of the two ingredients. This combination cannot, it is felt, become commercially useful in the United Kingdom for motor purposes until alcohol can be produced much more cheaply. The high inland revenue tax now keeps up the price of alcohol, though it can be produced very cheaply from many substances of little value. If alcohol alone were used for internal combustion engines, the design of such engines, it is said, would have to be changed to insure complete combustion. The difficulty in starting an engine from alcohol because of the cold can, it is asserted, be overcome by using either a vaporizer or a burner or a small quantity of petrol in the initial stages.

Benzol is regarded as perhaps the alternative fuel most likely to aid in the solution of the question. It is produced during the distillation of coal at gas works, and it is thought that it can be manufactured in sufficient quantities and sold at a fair price if the demand arises for it. It is more powerful than petrol, and experiments made with it are said to have been most encouraging, although the small percentage of sulphuric acid it contains gives rise to rather an unpleasant odor in the exhaust.

MAM' LINDA*

A Novel

BY WILL N. HARBEN

ILLUSTRATED BY F. B. MASTERS

CHAPTER XXIII

AS he was going to Blackburn's store the next morning to inquire about the prisoner, Carson met Garner coming out of the barber shop, where he had just been shaved.

"Any news?" Carson asked, in a guarded voice, though they were really out of earshot of any one.

"No actual news," Garner replied, stroking his powdered chin, "but I don't like the lay of the land."

"What's up now?" Dwight asked.

"I don't know that there is anything wrong yet; but, my boy, discovery is in the very air about us."

"What makes you think so, Garner?" They passed on the street-crossing leading over to Blackburn's store.

"Oh, it's all due to old Linda and Lewis," Garner said, in a tone of conviction. "You know I was dead against letting them know Pete was alive."

"You think we made a mistake in that, do you?" Carson said. "Well, the pressure was simply too strong, and I had to give way under it. But why do you think it was a bad move?"

"From the way it's turning out," said Garner. "While Buck Black was shaving me he remarked that his wife had seen Uncle

Lewis and Linda and that she thought they were acting very peculiarly. I asked him, in an offhand and careless manner as I could, what he meant, and he said that his wife didn't think they

acted as if they had just lost their only child. Buck said it looked like they were only pretending to be broken-hearted. I

thought the best way to discourage him was to be silent, and so I closed my eyes and he went on with his work. Presently,

however, he said, bluntly, 'Look here, Colonel Garner—'he always called me Colonel—'where do you think they put that boy?'

He had me there, you know, and I felt volumed of myself the idea of as good a lawyer as there is in this end of the State

wiggling under the eye and tongue of a crook as black as the ace of spades! Finally I told him that, as well as I could gather, the

Hillbend faction had put Pete out of the way and was keeping it a secret to intimidate the negroes through their natural superstition. And what do you reckon Buck said. Hink! he'd make a

good detective. He said he'd had his eye on the most rampant of the Hillbend men and that they didn't look like they'd lynched anything, but were on the lookout for a good opportunity in that

line."

"It certainly looks shaky," Carson admitted, as they moved on to the store, where Blackburn stood waiting for them just inside the doorway.

"How did he pass the night?" Carson asked, his brow still clouded by the discouraging observations of his partner.

"Oh, all right," Blackburn made reply. "He and Wade slept here on the counters. They say he snored like a sawmill. They could hear him through the floor. But, boys, I hate to dash cold

water in your faces, but I never felt as shaky in my life."

"What's the matter with you?" Garner asked, with a dry laugh.

"I'm afraid a storm is rising in an unexpected quarter," said the storekeeper, furtively glancing up and down the street and then leading them farther back into the store.

"Which quarter is that?" Carson asked, archly.

"The sheriff is acting sort of mighty odd," said Blackburn.

"Good Lord! you don't think Braider's really smelling a mouse, do you?" Garner cried, in genuine alarm.

"Well, you can make out what it means yourselves, boys," and Blackburn pulled at his short chin whiskers doggedly. "It was only about half an hour ago. He's drinking some, and was, perhaps, on that account a little more communicative. He came in here, his face as red as a pickled beet and smelling like a hunk of

a whiskey barrel, and leaned against the counter on the dry goods side.

"I'm the legally elected sheriff of this county, ain't I?" he said, in his inebriate way, and I told him he was by a big majority.

"Well," he said, after looking down at the floor for a minute, "I'll bet you boys think I'm a dern shuck out of an officer."

"I didn't know what the devil he was driving at and so I simply kept my mouth shut; but you bet your life I was quivering all over, for there was something in his eye that I didn't like, and then when he said 'you boys' in that tone I began to think he was

on to the work we did the other night."

"Well, what next?" Carson asked, sharply.

* Begins in HARPER'S WEEKLY, Vol. LI, No. 2550

"Well, he just leaned on the counter, about to slide down every minute," Blackburn went on, "and then he began to laugh in a silly sort of way and said, 'Then Hillbend fellers are a slick article, ain't they?'

"Of course I didn't know what to say," said the storekeeper, for he had his eyes on me and was grinning to beat the Dutch, and that is the kind of conversation I fall at. Finally, however, I managed to say that they had beaten the others to the

jail, anyway, and he broke out into another laugh. 'The Hillbend gang didn't have as far to go,' he said. 'Oh, they are a slick article, an' they've got a slick young leader.'"

"What else?" asked Carson, who looked very grave and stood with his lips pressed together.

"Nothing else," Blackburn answered. "Wiggin, your boom companion and boom friend, stopped at the door and called him."

"Good Lord! and with Wiggin?" Garner exclaimed.

"Oh, he's a Wiggin man!" said Blackburn. "I've known he was against Carson for some time. It seems like Braider sized up the situation and decided, if he was going to be re-elected himself, he'd better pool issues with the strongest man and he picked that shunk as the winner. I went to the door and watched them. They went off, arm in arm, towards the Court-house."

"Braider is evidently on to us," Carson decided, grimly, "and the truth is, he holds us in the palm of his hand. If he should insist on carrying out the law and rearresting Pete and putting him back in jail Dan Willis would see that he didn't stay there long, and Wiggin would swear out a warrant against us as the greatest lawbreakers unliving."

"Oh, yes, the whole thing certainly looks shaky," admitted Blackburn.

"I tell you one thing, Carson," Garner observed, grimly, "there are so two ways about it; we're going to lose our client and our election just as sure as we stand here."

"I don't intend to give up yet," Dwight said, his lip twitching nervously, and a fierce look of determination dawned in his eyes. "We've accomplished too much so far to fail on a gossamerous."

"Boys, I'd give anything I have to ward this thing off from old Aunt Linda. She's certainly had enough."

The two lawyers went to their office, avoiding the numerous groups of men about the stores who seemed occupied with the different phases of the ever-present topic. They seated themselves at their desks and Garner was soon at work. But there was nothing for Carson to do, and he sat gloomily staring through the open doorway out into the sunshine. Presently he saw Braider across the street and called Garner's attention to him. Then, to their surprise, the skiff turned suddenly and came direct towards them.

"See! here he comes!" Garner exclaimed. "He may want to jump us. Keep a sharp eye on him, Carson. He may not know anything actually incriminating, after all. Watch him like a hawk!"

CHAPTER XXIV

THEY both pretended to be deeply absorbed over their work when the stairfoot officer loomed up in the doorway, his broad-brimmed hat well back on his head, the flush of intentions in his tanned face.

"I hope I won't disturb you, gentlemen," he said, "but you are two men that I want to talk to. I might say talk to as a brother."

"Come in, come in, Braider," Carson said. "Take that chair."

As Braider moved with uncertain step to a chair, tilted it to one side to direct it of his burden of books, magazines, and old

books and other defunct legal documents, Garner, with a wary look in his eye, fished a solitary cigar from his pocket—the one he had reserved for a midday smoke—and proffered it.

"Have a cigar," he said, "and make yourself comfortable."

The sheriff took the cigar as about mindfully as he would in his condition, have received a large luncheon, and held it too tightly, for its preservation, in his big red hand.

"Yes, I want to talk to you boys, and I want to say a whole lot that I hope won't go any further. I've always meant well by you two, and had hoped for your success, both in the law—and politics!"

Garner cast an amused glance in spite of the gravity of the situation, at his partner, and then said, quite evenly, "We know that, Braider—we always have known it."

"Well, as I say, I want to talk to you. I've heard that an

honest confession is good for the soul, if not for the pocket, and 'tis here to make use of.

"Oh, that's it!" said Starnes; and with a deepening look of curiosity on his face, he sat waiting.

"Yes, and I want to begin look at the first, and sort of lend up. It's hard to keep a fellow's political leaning hid, Carson, and I reckon you may have heard that I was about to run in my track, with Wiggins."

"After he began circulating those tales about me, yes," Carson said, with a touch of severity. "not before, Brader—at least not when I worked last year for your own election."

"You are plumb right," the sheriff said, readily enough. "I mopped over children, I'll acknowledge, but that's another here me there. Plugging is as natural to a politician as it is to a rooster."

"Hoys," he went on, "what I'm going to say is a sort of personal matter. You've both treated me like an honorable citizen and officer of the law, and I've taken it just as if I fully deserved the honor. But Jeff Brader ain't no hypocrite, if he is a politician and humbug with that sort of riffraff. Hoys, always, away down at the bottom of everything I ever did tackle in this life has been the memory of my old mother's teachings, and I've tried my level best, as a man, to live up in 'em. I don't know as I ever come nigh committing crime—as I regard it—till here lately—the night the mob raided Bob Wynn's shanty and run Pete Warren out and chased him to your house, Carson. You may not want to look me in the eye again, my boy, when I tell you, but I could have got to that spot a sight quicker that night than I did, if I hadn't been lugged down with so many fears of injury to myself. As I saw that big mob raising like a mad river after that boy I said to myself, I did, that no human power or authority could save 'em, sneaky and that if I stood up before the crowd and tried to quiet them that—well, if I wasn't shot dead in my tracks I'd kill myself politically, and so I waited in the edge of the crowd, hiding like a thief till—till you did the work, and then I stepped up as big as life and pretended that I just arrived. Well, that ain't all. The next day I was put to a worse test than ever. It was asked about you, know, that a bigger mob than the first was rising. I stayed out of the centre of town as much as I could, for everywhere I went folks would look at me as if they thought I'd do something to protect the prisoner, and at home my wife was whispering around all day, saying she was sure he was innocent, or enough so to deserve a trial, if not for himself, for the sake of his mammy and daddy. But what was such a waverin' thing as I was to do? I took it that seventy-five per cent. of the mob who had harked me with their bullets in my election was bent on lynching the

woman milking a cow told me that it was never, Pete Warren was done for—guilty or not, he was done for. I went in the house, tried to pull down my stockings, faced by my wife, who wouldn't speak to me, and shivered in other ways what she thought about the whole thing. She was eternally sighing, and going on about old Linda and her feelings. I first went to the jail, and there I was told that two mobs had come—the first, the Hillbender crowd, who did the work, and the bigger mob that got there too late."

Brader's voice had grown husky, and he coughed. Garner stole a glance of inquiry at Carson, but Dwight, his face suffused with a warm look of pity for the speaker, was glancing out at the street through the open door.

"I ain't done yet, God knows I ain't," the sheriff gulped. "That morning I felt meaner than any convict that ever wore hell and chain. If I'd been tried and found guilty of stabbing a woman in the back I don't believe I could have felt less like a man. I tried to throw it all off by thinking that I couldn't have done any good, anyway, but it wouldn't work. Carson, you and your plucky stand for law and order was before me, and you wasn't paid for the work, and I was. Huh? Do you remember seeing me as you came out of Blackburn's store that morning, with your hair all tousled up and your eyes looking red and bloodshot?"

"Yes, I remember seeing you," said Dwight. "I would have stopped to speak to you, but—well, I was in a hurry to get home." "Well, you may know that I used to be a sort of detective," Brader went on, "and I had acquired a habit of looking for the explanation of nearly every unusual thing I saw; and, well, you coming out of that store before it was opened for trade, with the shutters in the front was closed, struck me as odd. Then, again, remembering your big interest in Pete's case, somehow it didn't look to me like—meeting you sudden that way—that you looked quite as down-hearted as I expected. In fact, I thought you looked sort of satisfied over something."

"Oh!" Garner exclaimed, all at once suspecting Brader of a glibbie ruse to rattrap them. "You thought he looked chipper, did you? Well, I must say he looked exactly the other way in me when I first saw him that day." "Well, it started me to wondering," went on the sheriff, ignoring Garner's interruption, "and I set to work to watch. I hung about the restaurant across the street, smoking a cigar and keeping my eyes on that store. Well, after a while I saw Bob Smith go in the store, and then Wade Tingle. Then I saw a big tray of grub covered with a white cloth sent from the American House, and Bob Smith came to the door and took it in, sending the cook that

fetch'd it back to the hotel. Well, I waited a minute or two and then saw another tray sent carelessly across and went in. I chatted awhile with Bob and Wade, noticing, I remember, that for a newspaper man Wade seemed powerful indifferent about gathering items about what had happened that night. Blackburn was busy folding up a funny-looking lot of short pieces of white damask. All this time I was looking about to see where that waterful of grub had gone. Not a sign of it was in sight, but in a full in the talk I heard the clink of crockery somewhere below me and I went out. Heys, I'm here to tell you that never did a condemned soul feel as I felt. I went out in the open air praying, actually praying that what I suspected might be true. I started for the jail, and on the way I met Hurt Barrett. I asked him for particulars, and when he said that the Hillbender mob had left word that nobody need even look for the remains of the boy my heart got a big jump in the same way as it had when that cup and saucer collided in that cellar. I asked Hurt, if he noticed which way the mob took the prisoner, and he said, down

"You are two men that I want to talk to"

pressed them they would call me a traitor. On the other hand, I was up against this: if I did put up a feeble sort of opposition the conservative men, like some we have here in town, would say I didn't mean business or I'd have actually opened fire on the mob. You see, hoys, I wasn't man enough to take a stand either way, and though I knew what was coming, through the day I went about lying like a dog—lying in my throat, telling everybody that the indications showed that the excitement had quieted down. I went home that night and told my wife all was severe, and I drank about a quart of rye whiskey to keep me from lalalal about it, and went to bed; but my conscience, I reckon, was stronger than any whiskey, for I rolled and tumbled all night. It seemed to me that I was, with my own hands, tying the rope around that poor nigger's neck. There I lay, the sworn officer of the law, dot on my back, with not enough moral courage in my miserable carcass to have killed a goat. I got up the next day and went out to my hog pen that stands on a back street, and there a

(towards town; and I asked him if it wasn't odd for Hill-bred folks to go that way to hang a man, and he agreed that it was. Well, to make a long story short, I was on to your ginigine race. God above knows what a load it took off of me. You had saved me, Carson—you had saved me from rotting that thing on my mind to my grave. I know you were the ringleader, for you had been all along. You are a night younger man than I am, but you stuck to principle; while I shirked principle, duty, and everything else. Doing all that was hurting your political chances, and you knew it; but you stuck to what was right, while I hung back."

"Yes, he certainly has quivered his political chances," Garner said, grimly, with a look of wonder in his eye over the sheriff's frank confession. "But you, I think you said, were a Wiggins man," he finished.

"Well, Wiggins and some others think I am," said Brainerd, "and I reckon I was till a day or so ago; but, boys, I guess I've got a little smidgen of good left in me, for somehow that set has turned my stomach. But I ain't got to what I was leading up to. Neither one of you hasn't admitted that there is a nigger in that cellar yet, and I don't blame you for keeping it to yourselves. That is your business, but the time has come when Jeff Brainerd's got to do the right thing or plunge headlong deeper into hellishness, and he's had a taste of what it means and don't want no more of it. I may have got it yet, but Wiggins and his gang may beat me to a cold finish for sheriff next time, but from now on I'm on the other side."

"Good!" said Garner. "That's the way to talk. Was that what you were leading up to, Brainerd?"

"Not by a long way," said the sheriff rose and stood over Carson, resting his hand on the young man's shoulder to steady himself. "My boy, I've come to tell you that the damndest, blackest plot agin' you that ever was laid is now forming."

"What is that, Brainerd?" Carson asked, in surprise. "Wiggins and his lot have conspired, and the sheriff rose was played right before last. The Hill-bred men have convinced them that they didn't lynch anyone, and the Wiggins crowd smelt around until they dropped on to the thing. The only fact they don't know is where the boy is hid. They think he is in the house of that negro preacher, Hardcastle, and Wiggins came to me not an hour ago, and considering me one of his standbys, he told me all about it. The scheme is for me to arrest Pete and jail 'em on the charge of murder, and then to arrest you for being the ringleader of a jail-breaking gang, who preaches law and order in public for political gain and breaks both in secret. Wiggins says that will keep you higher than a kite."

"And what do they think will become of Pete?" Carson asked, a touch of surprise bitterness in his tone.

"Wiggins didn't dwell on that, but I know what would happen to the slaver, for the neck of risk are being strangled by the hangman. They want to force every member of the crowd that lynched Sam Doolow and warned them, on their lives, not to repeat the statement that Doolow had said Pete was innocent. They told the lynchmen that you two lawyers were going to try to fool men that had heard the confession and hold that as evidence of their being in the lynching crowd."

"Ah, that is slick, slick!" Garner muttered.

"Slick as double-distilled goose grease," said Brainerd, "and it is working. The lynchmen are dying to friend or foe that Doolow said a word, and the news is spreading like wildfire that Pete was Doolow's accomplice, and that you, Carson, are trying, with a gang of town dukes, to carry your party by main bull-headed force."

"I see, I see," Carson had risen, and with a deep frown on his face he stood leaning against the top of his desk. He extended his hand to Brainerd and said, "I appreciate your telling me this more than I can say."

"What's the good of my telling you if the news won't do you some good?" the sheriff asked. "My boy, I want to see you win. I ain't half a man myself, but I've got two little boys just starting to grow up, and I wish they could be like you are—a two-legged bulldog that clings its teeth on what's right and won't let loose. Carson, you've got a chance—a bare chance—to get your man out alive."

"What's that?" Dwight asked, eagerly.

"Why, let me hold the mob in check by promising to arrest Pete, and you get away free. I am going to be a lawyer, and I ain't afraid to take him in a longer to get him out of the country to Chattanooga. It would be a ticklish trip, and you want a man that won't get scared at his shadow, for on every road out of Darkey men would be apt to be on the look-out; but if you can get him there he would be absolutely safe, for no mob would go out of the State to do work of that sort. Getting you a good man is the main thing."

"I intend to do it myself," Dwight said, firmly.

"You?" Garner cried. "That's absurd!"

"I'm the only one that could do it," Carson declared, "for Pete would not go with any one else."

"I really believe you are right," Garner agreed, reluctantly, "but it is a nasty job, after all you've been through."

"By gum!" exclaimed Brainerd, extending his hand to Dwight, "I hope you will do it. I want to see you complete a darn good job."

"Well, you are an officer of the law," Garner observed, with amusement written all over his pleased face, "asking a man to steal your own prisoner."

"What else can I do to this?" all that?" Brainerd asked. "Brainerd, do you really know that their power has been any warrant for Pete's arrest? I started to tell him without any, and old Mrs. Parsons turned him loose. The only time he was put in jail was by Carson himself to protect him from violence. By George! as I look at it, Carson, you have every right to take him

out of jail by any hook or crook, since you are responsible for him being there instead of hanging to a limb of a tree. I tell you, my boy, there ain't any law on earth that can touch you. Nobody is prepared to testify against Pete, and if you will get him to Chattanooga and keep him there for a week or so he can eat some back here a free man."

"I have friends there who will look after him," Dwight said, "and I'll start with him to-night."

CHAPTER XXV

THE CLOCK was striking eleven that night and Helen was about to retire when she heard the dull beat of horses' hoofs on the carriage-drive of the Dwight place, and through the half moonlight she saw from the piazza a pair of horses harnessed to a buggy and driven by their owner, slowly going towards the big gate. Dwight himself got down to open it. She heard his low commands to the spirited animals as he led them forward by the bit, and then he stepped back to crouch and latch the gate. She had an almost overpowering impulse to call out to him and, getting his attention, to implore him to desist from the undertaking, of which Keith Gordon had told her; but her tongue seemed to be paralyzed, and she could only hold out her hands in mute, impotent entreaty. She saw him get into the buggy again, heard his rules under his whip to the horses, and then he was off—off to do his duty and—hers. She went to her room and laid down wearily. Then all at once she had a memory which sent the hot blood of shame from her heart to her brain, and she sat up. That was the man against whom she had staved her heart for his confession of her youthful indiscretions, and then he was to be so used. Was he to go forever unrepentant, unpunished by such as she, while he had that sort of word within him?

The hours of the long night dragged by, and another day began, a day in which she was to learn the outcome of Carson Dwight's act of heroism. Keith came up after breakfast and related the particulars as to how the state had ruled the ill-starred Pete in woman's attire and seen him and Carson safely in the buggy, but that was all that could be told or foretold. As for Keith, he and all the rest were trying to look on the bright side, and they would succeed better led for the long fair Pole Baker had drawn alone, he came in town early that morning and heard of the expeditions.

"No he was married?" Helen asked, in perturbation. Keith deliberated for a moment, and then answered:

"Yes; to tell you the truth, Helen, it almost staggered him. He is a good-natured chap, and he has hot temper. He cussed to me all sort for a willy, stupid set for allowing Carson to take such a risk. Finally we drew what he heard out of him. He said the particular road Carson took was actually alive with men who had been bound up to the lightest trees, and they were all for the green. Pete said there had been their eyes that road particularly because it was the most direct way to the State line, and that Carson wouldn't have one chance in five hundred of getting through unmolested. He said the idea of fooling men of that stamp by putting Pete in a woman's dress in the company of Carson, of all human beings, was the worst of human insanity."

The hours passed. The dusk had given way to the deeper darkness of evening. The moon had not yet risen and the starlight from a partly clouded sky was not sufficiently luminous to lead the vision in reaching any considerable distance, and yet from one of the windows of her room, where she stood morosely contemplative, she could see the vague outlines of Linda's cottage. It was while she was looking at the doorway of the little domicile, which stood out above the shrubbery of the rear garden as it dimly lighted from a candle within, that she saw something which caused her heart to suddenly bound. It was the red coat of a elgar, and the smoker seemed to be leaving the cottage, passing through the little gateway and entering her father's grounds. What more natural than for Carson, if he had returned safely, to go at once to the mother of the boy with the news? Helen almost let her hand fall. She held it soon be reasonably sure, for if it were Carson he would take a diagonal direction to reach the gateway to the Dwight homestead. Was he coming directly to Warren's or—could it be her father? Her heart sank at the thought, and then it bounded again, for the coat of fire, like a fiery arrow, was making its way to the main house. She saw the flames Helen glided, noiselessly, past her father's hall and call her, and yet rapidly. When she reached the front veranda and descended the steps to the grass of the lawn, she was just in time to see the coal of fire passing through the gateway to Warren's. No more was seen of it. She stood there, firmly and clearly.

"Carson! Carson!" the coal of fire passed, described a curve, and she bounded towards it.

"Did you call me?" Carson Dwight asked, in a voice so low from excitement that it hardly reached her ears.

"Yes, Walt!" she said. "Oh, you've gotten back!"

They now stood face to face.

"Oh, yes," he laughed, with a gesture towards his throat of apology for his hoarseness. "Did you think I was off for good?"

"No; but I was afraid—" She was shocked by the pallor of his usually ruddy face, the many evidences of fatigue upon him. The nervous way he stood holding his hat and cigar. "I was afraid you had met with disaster."

"But why did you feel that way?" he said, reassuringly.

"Oh, from what Keith said in general, and Mr. Garner about the news that the road was full of desperadoes, and—" "I might have known that they would expurgate the whole business," he said, with a smile. "Why, I've just come from Mom's Linda's. I want to tell her that Pete is all right and as sound as a dollar. He's in the charge of good, reliable friends of

mine and wholly out of danger. In fact, he's as happy as a lark. The last thing I saw of him he was surrounded with a gang of as lazy scamps as himself bragging about his numerous escapes and his and—his generous—my impudence in the community we live in. Well, he's certainly been important enough lately."

"But did you not meet with—with any opposition at all?" Helen went on, curiously.

"Oh, well," he boasted, "we lost our way, for one thing. You see, I was a little afraid to carry a light and it was hard to make out the different sign boards, and all in all it was a slow trip, but we got through all right. And hungry! We struck a restaurant in the outskirts of Chattanooga about noon, and while that fellow was cooking in some steak and making red-velvet we could have eaten him alive. If Mam' Liza could have seen her boy eat she would have no further fears as to his health."

"But didn't you meet some men who stopped you?" Helen asked, staring into his eyes steadily.

He blinked, flicked the ashes from his cigar, and said:

"Yes, we did, and they were really on the war-path; but they seemed very reasonable, and when I had talked to them and explained the matter from our standpoint—why, they had nothing more to say."

They had walked further into the grounds and were near the main walk when the gate was opened and a man came striding towards them. It was Jeff Bralder.

"Oh, I've been looking for you everywhere, Carson," he cried, warmly shaking Daugh's hand. "I heard you'd got back, but I wanted to see you with my own eyes. Lord, Lord! my boy, if I'd known the awful trouble I was getting you into I'd never have let you take that road. I've just heard the whole story. For genuine pluck and endurance you certainly take the rag off the bush. Why, nine hundred and ninety-nine men out of a thousand would have given up the game; but you, you young bailing—"

"Carson! Carson! Are you down there?" It was a man's voice from an upper window.

"Yes, father. What is it?"

"Your mother wants to see you right now. She's waked up and is bothering."

"You'll both excuse me for just a moment, I know," Carson said, as if glad of the interruption. "I'll be back presently. I haven't seen my mother since I returned, and she is very nervous and easily excited."

CHAPTER XXVI

"So you are the only holy member of the secret gang that stole my prisoner," the sheriff said, laughingly. "They told me all about it."

"I wasn't a member till they had done all the work," Helen smiled. "I was only an honorable addition, elected more to keep my mouth shut than for any service I could perform."

"Oh, that was just it," Bralder laughed. "Well, they certainly put the thing through. I've seen a lot of things in my time, but that kidnapping business was the brightest idea ever sprung from a man's head. That young fellow is a corker. Did he tell you what he went through last night?"

"Not a thing," Ned answered. "The truth is, I have an idea he was trying to mislead me."

"Halt that!" Dan Wells suddenly called out

and crested ready for him. The boy's enemies had fixed him. They had worked the mob up to the highest pitch of fury with all sorts of tales against Pete. They had produced none who had really heard the nigger threaten to harm Johnson, and they themselves testified that Carson was saying nothing only to capture black slaves as their friend and benefactor. The mob was mad as Tucker at him for tricking them the other night, and they were certainly ready for him.

"They were mad at Carson personally, then?" Helen said.

"Were they? They were ready to drink his blood. They halted the buggy, took them both out, and tied them."

"Tied Carson?" Helen's voice died away, and she stood staring at Bralder unable to speak.

"Yes, they tied them both and tied them off into the woods," Bralder continued. They then fastened Pete to a stump and piled sticks and brush around him and told Carson they were going to make him see these burn the boy alive, and when that was done they intended to destroy all evidence against them by shooting him dead in his tracks."

Helen covered her face with her hands and stifled a groan.

"His tongue saved him. Miss Helen," Bralder went on. "It saved them both. It wasn't any begging, either; that wouldn't have gone with that mob. With his hands and feet tied he began to talk—that's what ails his throat now—and the man that confessed it to me said such words and argument never before rolled from human lips. He told them he knew they would kill him; that they were a merciless mob of desperadoes; but he was going to give some truths at them that they would remember after he was gone. I'm no talker, Miss Helen, I can't repeat what the man told me was said. He said at first Carson couldn't get their attention, but after a while when they were getting ready to apply the match something in Daugh's voice caught their ear and they paused. He talked and talked, until a man behind him, in open defiance, cut the cords that held his hands."

A NEWLY DISCOVERED PORTRAIT OF POCAHONTAS

By HELEN MARSHALL PRATT

WHEN the Princess Pocahontas, having won for herself enduring fame by her signal services to the newly pressed colonists of Virginia, set sail for England in the year 1616, her condition and appearance were so unlike those of the little Indian "maiden of the forest" whom Captain Smith first saw with her charming father, that any new portrait of her that can be discovered cannot fail to be of interest.

Pocahontas, also known as Matoa, and Snowfeather (on account of her lightness of foot), and, after her baptism, Rebecca, had been a wild little heathen in the midst of a rude Indian tribe. But now she had been three years baptized and married the honored wife of John (or Thomas, he is called by both names), who was "an honest and discreet English gentleman." The little woman had been born to her; Captain Smith had sailed away to England, and she had been told that he was dead. Now, in the month of a Virginia June, nearly four hundred years ago, she was setting out for the great world of England with Sir Thomas Dale, as a bright example for the Virginia Company to exhibit to the people of England of the first fruits of Christianity in the new colony, "the little foreign prince, gentle and excellent of wits, the first red Indian in whose heart had ever burned the love of Christianity."

On their arrival, Pocahontas was welcomed by Sir Thomas Stukely, the Company's man, at the ship's side, and the gentleman bowed low to the princess. The Company provided for her and her son during their stay in London. Captain Smith wrote a letter to Queca Anne, the wife of James I., filled with praise of the beauty, gentleness, and courage of the Indian girl, commending her to the queen's friendly consideration, and asked that she be received as a princess whose husband's estate was "not able to make her fit to attend your Majesty."

The king and queen responded generously to this request, and graciously received her as one of royal blood, whose gentleness and native refinement could atone for her ignorance of courtly customs. Lord and Lady Isb le Warr noted as her social sponsors: "La Belle Sauvage" was admitted and discovered in the highest circles of London, and at least one London tavern still retains the name by which she was popularly known. Gentlemen sent copies of her engraved portrait in their letters abroad, as the novelty of the hour. She attended these banquets which the queen so much affected, and in the queen's company. In his *Simple of Years*, Ben Jonson introduces her, with other people of fashion, as "the blessed Pocahontas . . . the great king's daughter of Virginia." Dr. King, then Lord Bishop of London, made a great banquet in her honor, "in hopeful zeal by her to advance Christianity." And in all these appearances, "the lady did not only acquiesce herself in civility, but still carried herself the daughter of a king, and was accordingly respected for her modest demeanor and interesting manner."

After ten months of apparently joyous living, a special ship was provided by the Company for her return to America, "were against her will." Her health had suffered much from the change of climate, and she was very weak when taken to Gravesend to await the ship. Here they were detained several weeks by adverse winds, and when at length she was taken on board the ship,

This Portrait of the Indian Wife of John Rolfe, by an unknown Artist, is believed by competent Judges to have been Painted from Life

the princess's failing strength gave way and she died suddenly, March 29, 1617, and was buried in the church of St. George at Gravesend. A recently discovered letter of Mr. Rolfe addressed to Sir Edwin Sandys tells how deeply the wife's death was lamented by all, and that the son's life "greatly extinguished the sorrow of her loss, saying all must die, but 'tis enough that her child live." (*Virginia Hist. Mag.* 10: 138.)

Three portraits of Pocahontas are current. One a contemporary engraving by Simon de Passe, which appears in early editions of Smith's works, and has been copied and recopied until its original features are scarcely recognizable. The second portrait is owned by a descendant of the Rolfe family in Norfolk, and represents Pocahontas in court dress. It is undoubtedly contemporary, and that of which De Passe made his engraving. This painting was first reproduced by Wyndham Robertson, Esq., in his interesting volume *Pocahontas and her Descendants*, in 1887. A third picture is known as the Sully portrait, and was made by the painter of that name from fragments of two or three earlier pictures, of the genuineness of which I have no information.

Recently, while living in England, my attention was directed to a fourth picture of Pocahontas, with her little son, owned by a descendant of the Rolfe at King's Lynn, Norfolk, which had never been copied, and its owner very courteously granted permission to have it photographed. This picture is reproduced with this article. The owner makes no claim whatever for the picture, which may be contemporary. It may be of later date. It was purchased by the family in London, about twenty years ago, and was said to have come from America. Certain features, however, point to an early origin. The peculiar shell earrings, set in silver, which the mother wears, are identical with those which are in the possession of the Rolfe family of Henricum, handed down for three centuries as those of Pocahontas.

The face is distinctly that of a refined Indian girl; she was twenty-two at her death. The dress is a modification of her tribe costume. The melancholy expression which is said to have been habitual appears here. The child is a handsome boy of three or four. On the death of his mother, he was left in England to be educated, and later returned to Virginia, where he married and became a man of eminence, in whose many prominent families of Virginia, notably that of John Randolph, of Roanoke, trace their origin.

While Pocahontas resided in England, several prominent portrait-painters were in favor with the king and his court, of whom they painted numerous pictures. Among these were Nicholas Hilliard, Paul van Somer, Isaac Oliver, Mytens and Simon van der Pass the Utrecht engraver, who also painted portraits. The last was only ten years in England, his visit there coinciding in date with that of Pocahontas. And undoubtedly at that time the carver engraving of her was made, probably from the portrait named as second. Nicholas Hilliard had special license given him to paint portraits of the royal family. Paul van Somer was a Flemish artist of the court who excelled in accuracy of detail, and De Passe also was employed by him. Mytens, of The Hague, was a fine colorist; Isaac Oliver, a pupil of Hilliard, painted the family of James and the court.

The Farewell

Good-by, dear friend: brief was thy stay;
Ah, well, God speed thee on thy way!
Thou'rt closed the door—the little room
Stands empty in the gathering gloom.
And there, where once the fire flamed high,
A few pale embers, scattered, lie.
And suddenly grown gray and still
The place that sunshine late did fill.
Hast thou no lingering thought to bless
This other waste and loneliness?
Didst find no comfort, peace, or rest,
That thou shouldst start again the quest?
Well, I will cleanse it through and through,
Furnish and garish it anew.
Build friendships yet and guests it will,
That thou mayst yet return, to dwell
Not as a passing guest, but one
Who comes at last into his home.
So, then, good-by, dear friend, and may
God speed thee ever on thy way!"

ELIZABETH RUGLES.

The Army Octogenarians

With all its perils, the military profession has its enviable record for longevity. Of the 928 officers on the retired list of the army—encompassing those who were compulsorily retired on reaching the age of sixty-five years, and those who were upon their own application or for disability, and so on—there are more than 100 (109, to be exact) who have attained the age of seventy years or more. The oldest officer is Brigadier-General David H. Hunter, who lives in Washington, who was born in 1812, and who was an officer of dragoons in 1837, and who is within five years of being a centurion. It is a long jump to the next oldest officer, Lieutenant Colonel Frank Beideman, who is eighty-seven years old, and the third oldest officer, Brigadier-General Thomas F. Head, who is eighty-six years old.

The survivors who are seventy-five years old or more are to be classified according to years of existence as follows: Twenty-one who are seventy-five years old, seventeen who are seventy-six years old, sixteen who are seventy-seven years old, five who are seventy-eight years old, ten who are seventy-nine years old, five who have reached the age of eighty, six who are eighty-one years old, eleven who are eighty-two years old, seven who are eighty-three years of age, two who are eighty-four, five who are eighty-five, and one of eighty-six, eighty-seven, and ninety-five years of age respectively.

The highest ranking officers of the venerable list are Major-General David H. E. Nickles of New York, who gained a medal of honor for gallantry at Gettysburg before and after the loss of his leg, and who has served his country in Congress, and Major-General D. D. Howard, who lost an arm at Fort Oka, who wears a medal of honor, and has received the thanks of Congress. The former officer is eighty-two and the latter is seventy-seven years of age. Besides these two major-generals, there are nineteen others who have reached the age of seventy-five years, forty-three brigadiers, two colonels, thirteen lieutenant-colonels, twenty-seven majors, six captains, twenty first lieutenants, and five chaplains.

These soldiers of the old army make their homes all over the United States. Nearly all of the States are represented in the list of their addresses. A few of them spend much or nearly all of their time abroad, and one makes his home in his native town in Germany. He is Brigadier-General Peter J. Osterhaus, who is eighty-four years old, and who has a son and a grandson in the United States navy, the former, Captain Hugo Osterhaus, being now in command of the battleship *Conan*, and the latter, Lieutenant Hugo W. Osterhaus, a watch officer on board the *United States* sailing Louisiana. Many of the older retired officers naturally turn to Washington as the place where they shall spend the remainder of their days. There they find their old friends, and keep in touch with the younger element of the profession, and where they are honored members of the Army and Navy Club and the Metropolitan Club. Eighteen of the one hundred and eight in the list of officers of seventy-five years of age and more make

their homes in Washington, nine in New York, fourteen in New England, and twelve in the Pacific coast.

The octogenarian class—with its thirty-nine members—includes a list of officers who have achieved distinction before many of the army officers of the present active list came upon the scene of tumult. They were fortunate in living in the period which was fraught with rare opportunity for the performance of gallant duties, and many of them are adorned with the medal of honor, or less, like General Stanford, the thanks of Congress. They were seen in the full flush of manhood when the Civil War was on, for all of them were at least thirty-four years of age, while General Tucker, at the outbreak of the Civil War, was nearly fifty years of age.

The officers who have reached or passed the eighty-year mark include such names as General H. B. Carrington, General James Van Vorst, General John E. Summers, General Robert Murray, General Luther P. Heald, General Rufus Saxton who would have been appointed quartermaster-general had Lincoln lived; General Richard C. Drum (at one time adjutant-general of the army), General W. B. Rochester, General B. H. Grierson, and Colonel James Oakes.

She Was a Bird

MISTRESS. "Mary, have you any rooted objections to going a feather duster? This room looks as if you had."

MARY. "Yes, miss, I have. I belongs to the Ashkenazy Society."

Not Worth Debating

JENNIES. "Flies never annoy a sleeping man."

PERRINE. "What nonsense? Why, I—"

JENNIES. "The room wakes up and is annoyed."

The Oath of Office

IN command of a retinal Western post is a well-known veteran of the army, now to be retired, who, General Miles used to declare, "was the most profane officer in this or any other army."

A day or two prior to the departure of this officer from Washington to take the post mentioned, a lady at a reception inquired of General Miles whether the officer first referred to had duly qualified for his new command.

"Yes, indeed," responded Miles, gravely.

"He swore himself in yesterday."

What He Missed

ONE of the officials of the Indian Office at Washington was visiting a reservation in Montana on government business when a certain chief, who had taken a fancy to Uncle Sam's agent, invited him to attend the wedding of the Indian's daughter.

The Indian Office man was, to his regret, unable to be present at the festivities, but the Indian laconically described the function subsequently, in order to indicate what the agent had missed.

"Five dogs," said the chief, "and plenty pie."

The Through Train

IN a retinal region of Arkansas there's a "head," the only train running on the branch in the southwest of Little Rock; and the service is consequently of the "up and back" order.

A number of people bound for the southwestern terminus of the road happened one day to reach a small station half-way up just as the train passed on its northwesterly trip. The conductor looked them over.

"All gots to takeville?" he inquired.
The travellers replied that they trusted to do so eventually.

"Then," said the conductor, "you'd better all hop on now, and then maybe we can skip this station on the way back."

Polishing His Gold Brick

THERE is an elderly but well-preserved clerk in one of the departments at Washington whose extremely martial bearing, together with the red face and white hair so intimately associated in the popular mind with the military, has on more than one occasion caused the old gentleman to be taken for some distinguished officer or other. This mistake on the part of his fellow citizens is a source of much gratification to the old gentleman, and he never loses an opportunity to heighten the illusion on their part.

Recently this clerk was in a Pullman attached to a train for New York, when the usual mistake occurred. Several men saluted the distinguished-looking clerk, which salutes he returned with military gravity. Finally a man giving evidence of having dined a bit too freely greeted the old chap with: "How are you, General?"

The old gentleman did not reply; but gave the unknown a glance of great severity. Then, observing to a train-boy who chanced to be passing at the moment, he called out: "Here, boy! Give me a copy of the *Army and Navy Register*!"

What a Chance

NEWMAN. "I'm going to leave home."

MISTRESS. "Why, what is the matter? Don't you like the baby?"

NEWMAN. "Yes; but he is so afraid of a policeman I can't get him near one."

That's Different

CHIEF OF THE DEPARTMENT. "I hold that a tomato, however well aimed, could not have caused such a black eye."

PLAINTIFF. "But I was in a car, yet honor."

FOR THE NURSERY—FOR THE TABLE.
Whether as an ideal food for infants or for general household use, Borden's Eagle Brand Condensed Milk has no equal on either side of the globe. It is infinitely rich, sweet and pure.

ADVERTISEMENTS

DOCTOR'S FOOD TALK

Selection of Food One of the Most Important Acts in Life.

A Mass. doctor says: "Our health and physical and mental happiness are so largely under our personal control, that the proper selection of food should be, and is, one of the most important acts in life."

"In this subject, I may say that I know of no food equal in digestibility and more powerful in nutritive value than the modern Grape-Note food should be, and is, one of the most important acts in life."

"I am convinced that the extensive and general use of high-class foods of this character would increase the term of human life, add to the sum total of happiness, and very considerably improve society in general. I am free to mention the food, for I personally know of its value."

Grape-Note food can be used by babies in arms or adults. It is ready cooked, can be served instantly, either cold with cream, or with hot water or hot milk poured over. All sorts of puddings and fancy dishes can be made with Grape-Note. The food is concentrated and very economical, for four heaping teaspoons are sufficient for the cereal part of a meal. Read the little book, "The Road to Wellville," in page. "There's a Reason."

MAM' LINDA

(Continued from page 567.)

Later another cut his foot loose, and then Carson walked straight up to Pete and stood beside him, and while a crowd of fury was still in the air he kept talking.

"He hadn't a thing to say in favor of Pete's general character; he said the boy was an idle, fun-loving, shiftless fellow and as harmless as a rat, but he was innocent of the crime charged against him and he should not die like a dog. He spoke of the fine characters of Pete's mother and father and of the old woman's grief, and then, Miss Helen, he said something about you, and the man that told me about it said that that one thing did more to soften and quell the mob than anything else."

"He said something about me?" Helen cried.

"Yes. No names were mentioned; but they knew who he meant," Braider went on. "Carson spoke of your family and of the close bond of human sympathy between it and all the blacks that had belonged to it in the past, and said that the daughter of that house, the most beautiful womanly character that had ever blessed the South, was praying at that moment for the safety of the prisoner, and if they carried out their plans she would shed tears of sorrow. 'Your intentions are good,' Carson said. 'You are all sincere men acting as you see it, in the interests of the women of the South. Listen to this gentleman's prayer uttered through my mouth to-night for mercy and human justice.'"

"It swept them off their feet, Miss Helen; the man that told me about it said he never saw a manner, more honest lot of men in his life. He said they relieved Pete, led the horses around, and stood like soldiers, with nothing to say, as Carson drove away."

Helen waited for about ten minutes alone on the grass—waited for Carson. When he finally came out and hurried towards her he found her with her handskerchief pressed over her eyes.

"Why didn't you tell me?" she asked, frowning her hand tenderly on his arm, her eyes shining radiantly of ineffable sweetness.

He shrugged his shoulders and then said, flushing under her urgent gaze:

"Because, Helen, you've already seen and heard too much of this awful story. It really is not for a sensitive girl like you."

"Oh, Carson," she cried, "you are the dearest, sweetest boy in the world!" and she turned and left him, left him alone there in his fatigue, alone under the starlight, to fight as he had never fought before the deathless yearning for her.

CHAPTER XXVII

Two weeks went by. Great changes had come over the temper of the insurgent mountain people. They had gradually come to accept the rescue of Pete Warren as a chance fit of real justice that was as admirable as any unequal and brutal. A sufficient number of men had come forward and testified to Sam Doolin's anti-ordered confession to exculpate Carson's client, and some who had been leaning towards Dwight's cause politically were hunting for occasion that surely a man who would take such a plucky stand for the rights of a humble negro would not be a mere henchman as their representative in the Legislature of the State.

One morning Pole Baker clonched down the street from the wagon-yard and went into Garner's office finding him at his desk.

"Anything gone wrong?" Garner asked, looking up curiously.

"Well, not yet, Bill, but I believe I take it," the bailiff by the horns ahead for some time that Carson and Dan Willis would meet face to face, and I dread it now more than ever; Willis is now worse than ever."

"What's gone wrong with him?" Garner inquired, uneasily.

"Well, for a while, you know, he hoped he'd see Wiggins beat Carson, and that sort of satisfied him; but now that Wiggins is losing ground, Dan don't see his revenge that way. Respectable folks are treading the backs of Wiggins and all his lackeys. The gal Willis was to marry has thrown him over, and the preacher at Hill Crest just as good as called his name out in front of the rights of the heinousness that was spreading over the land. Oh, Willis is mad—he's got all hell in 'is, an' he's makin' more threats agin' Dwight. Now, to-morrow he's bringin' us the next day is Saturday, an' as you know, Dan Willis is comin' in town. I got that straight. Wiggins is a snake in the grass, and he's constantly naggin' Dan about his row with Carson, and it will take slick work to prevent serious trouble."

Garner frowned. "What had you in mind, Pole, to scribe trouble?"

"Why, you see," the mountaineer replied, "I 'bowed you might be able to trump up some business excuse for 'trollin' Carson out o' town next Saturday."

"Well, I thank I can," Garner cried, his eyes brightening.

"The truth is that I was to go myself over past Springfield to see old man Purdy to take his deposition in an important matter, but I am perturbed to be tied here and get Carson to go."

"Good, that's the stuff," Pole said, with a smile of satisfaction.

"But for the love of mercy don't let Dwight dream what's in the wind, or he'll die rather than budge an inch."

So it was that Carson, the following Friday afternoon, made his preparations for a ride on horseback through the country, his plan being to spend the night at the little hotel at Springfield and ride on to Purdy's farm the next morning after breakfast, and return to Derby Saturday evening shortly after dark.

As he was unbridling his horse, Dr. Stone crossed the street from the opposite sidewalk and approached him.

"Where are you off to, this time?" the old man asked.

Carson explained as he tightened the girth of his saddle and pulled the blanket into place.

"Well, I'd get back as soon as I could well manage it," the physician said, his eyes on the ground.

Carson started, and turned almost pale.

"Why, doctor, you are not afraid—?"

"Oh, she's doing very well, my boy, but—well, there is no use keeping back anything from anybody as much concerned as you are. The truth is, she's very ill. I think you can pull her through with care and attention, but I feel that I ought to warn you and lecture you a little, too. You see, as I've often said, she is a woman who suffers mightily from worry and excitement of any kind, and your adventures of late have not had the best effect on her health. I hope it's all over, and that you will settle down to something more steady. Her life really is in your hands more than mine, for if you should have any more trouble of a serious nature it would simply kill her. I only mention this," the doctor continued, laying his hand on the young man's arm apologetically. "Because there is some little talk going round that you and Dan Willis haven't quite settled your differences yet. If I were in your place, Carson, I'd take a good deal before I'd have trouble with him right now, considering the critical condition your mother is in. A shooting-scene on top of all the rest, even if you got the best of it, would simply send that poor woman to her grave."

"Then we won't have any shooting-scene," Carson said, his voice quivering. "You can depend on that, doctor."

The road Carson Dwight took as the most direct way to his destination really passed within two miles of the house of Dan Willis, and yet the likelihood of the likelihood of the two never once crossed Dwight's mind. In this, however, he was to meet with surprise. He had got well into the mountains and, full of hope as to his campaign, was heartily enjoying a slow ride on his snubling horse through a narrow shaded road, after leaving the heat of the open thoroughfare, was far ahead of him and his horseman at the side of the way pinning with his pocket-knife, to the smooth lark of a sycamore-tree, a white envelope. The distance was at first too great to Dwight to recognize the rider, though his object and occupation were soon evident, for, suddenly swelling on his rather skittish mount, the man drew back about twenty paces from the tree, drew a revolver, and began to fire at the target, one shot after the other, as rapidly as he could fire and spur his frightened animal to an approved distance and steadiness, until his weapon was empty. The marksman, evidently a mountaineer, from his wide-brimmed soft hat and easy gait, thrust his hand into his trousers pocket and took out sufficient cartridges for another round, and was thumbing them dexterously into their places when Carson drew near enough to recognize him.

When the two riders were about a hundred yards apart, Dan Willis, hearing the fall of a horse's hoofs, looked up suddenly. There was no mistaking the growth of his facial expression from startled bewilderment to that of angry, brutal satisfaction. Uttering an unspoken great of delight, and with his revolver swinging easily against his breezy thigh, he by the aid of a stone left hand he drew his horse squarely into the very middle of the narrow road and then ceased to check him. The animal, quivering with excitement from the shots just fired over his head, was still restive and snarled tremulously from side to side; but with spur and rein command Willis managed to keep him in the attitude of open opposition to Carson's passage, which was a threat not to be misunderstood.

Carson Dwight understood it, and his blood boiled.

"Halt that!" Dan Willis suddenly called out, in a sharp, fierce tone, and as he spoke he raised his revolver till the hand holding it rested on the pommel of his saddle.

"Why should I halt?" almost to his surprise rang clearly from Dwight's lips. "This is a public road, I believe."

"Not for your sort," was hurled back. "It's entirely too narrow for us two to pass on. I'm going to pass, but I'll walk my horse over your body."

"Well, if I have to, that settles it," said Carson. Unhindered age overwhelmed him. "But before we go into this thing tell me, for my own satisfaction, if you are the one who tried to kill me the night that Pete Warren was shot?"

"You bet I was, and prouder of it than I've ever been of anything before in my life," and Willis's revolver was raised. The sharp click of the hammer was heard like the snapping of a metallic twig. Then, alive but to one thought, and that of alert self-protection, Carson, without a moment's delay, drew his weapon. With his teeth ground together, his breath coming fast, he took no careful aim as was possible at the shifting horseman, conscious of the advantage his antagonist had over him in the calmness of his mount. He saw a puff of smoke before Willis's eyes, heard the sharp report of the mountaineer's revolver, and wondered if the ball had lodged in his body.

"I am justified," something within him seemed to say as he pressed the trigger of his revolver. His hand had never been more steady, his aim never better, and yet the smile and laugh of Willis proved to him that he had missed. The eyes of his assailant gleamed like those of an infuriated beast as he tried to steady his rearing and plunging horse to shoot again. Once more he fired, but the shot went wild, and with a shout of fear his horse leaped from the road and plunged madly into the bushes bordering the way. Carson could just see his head and shoulders above the growth of wild vines, and at these he shot almost wildly and fired. Had he won't he asked himself. There was a smothered report from Willis's revolver, as if it were fired by an inert finger, and Willis's head went out of sight. What did it mean? Carson wondered, and with his weapon cocked and

THE RECOLT OF FRANCE'S WINE-GROWERS

By H. T. SUDDUTH

The wine-growers of southern France have taken the law into their hands in the Midi region as a protest against what they hold to be the unjust and injurious attitude of the government toward the industry upon which they depend for a livelihood. If the government, they insist, will not buy their wine—which they themselves can find no market for at a reasonable price—it should at least make laws which shall promptly and effectively suppress the adulteration of honest product having a genuine wine out of the market. In attempting to enforce their demands, the peasants have assembled in various parts of the Midi in enormous demonstrations. The Mayors have refused to perform the duties of their office, and regiments garrisoned in the insurgent region have betrayed their sympathy with the wine-growers by insubordinate and even mutinous conduct. More than a thousand municipalities are affected.

It is related that Claude Bross, an honest man of Charney, eight feet tall and big in proportion, who grew his vine and made his own wine, once upon a time came to the conclusion that Paris ought to know the merit of his vintage. Harnessing his oxen to his cart and placing two barrels of wine on it, he started for the capital, but when passing through Versailles he saw a chance to stop and went to jail at a time when Louis XIV. appeared to be worshipping there. The King, noticing a man who appeared to be standing when the little bell rang during mass, sent an officer with an order for the man to kneel.

"Sir," said the officer, upon his return, "the man is kneeling, but is very tall." After the service the King asked the giant why he had come to Paris.

"Please, your Majesty," said the honest wine-grower, "to sell you the best wine in France." The King tasted it, found it excellent, and purchased it, thus establishing the reputation of Mayon as one of the best wines of France.

Something like this, though on a vast scale and not as yet with like results, is now taking place in southern France, though the attitude of the vintagers, humble and respectful enough at first, is fast changing to passive and in some cases to active resistance to governmental authority. If the government will not buy their wine, which they find no market for at a reasonable price, and thus make a government monopoly of it, like that of tobacco, for instance, or at least make laws which shall promptly and effectively suppress the adulterators whose fabricated product has driven genuine wine from the market, they will no longer pay taxes.

Such is the reasoning which seems just to the poor peasants who for a month or more have been assembling on Sundays in the chief towns of the Midi in vast demonstrations, first at Narbonne, then at Béziers, then at Perpignan, where 150,000 men, women, and children were in line at Carcassonne, where 20,000 assembled, and finally, Sunday, June 9, at Montpellier, where the distressed and half-starved wine-growers and their sympathizers to the number of half a million or more met in a huge demonstration.

The movement has grown with a startling rapidity and all classes of the population appear to have joined in it. The satisfaction with existing conditions has grown so serious as to justify these words of the vice-president's address at the meeting at Carcassonne:

"Our march across the cities of Narbonne, Béziers, and Perpignan was triumphant. Today the riotous has become an irresistible torrent, the mere flood a real sea washing the slopes of the old city of the Visigoths. Let us put ourselves under the wings of those ancient knights who fought in these cruelled walls for the independence of their faith. Let us struggle like them and the hour of imminent justice will strike."

The economic turmoil, as these words indicate, has found its outlet. It has also found its leader in M. Marcelin Albert, who has already been hailed as "the Napoleon of the Midi." It is he who has planned these vast demonstrations, and this man, until a few weeks ago an obscure vine-grower, has suddenly become a personage with whom the government of France may have to deal. It is by his counsel, also, that the movement, which originated in real distress, has at last taken on the character of a strike against civil authority, and against, unprovoked, and even the prefects and town councils of southern France, unable to stem the tide of agitation, are trying to down their authority and joining in the general movement.

Unfortunately, there seems to be no way for the government of France to comply effectively with the demands of the wine-growers, for although the demonstration has been made chiefly against the peasants who adulterate the vineyards of the Midi, still their distress, there are many other factors entering into the situation which cannot promptly be met by the enactment of even the most drastic laws against "blending" and adulterating wines. Yet it is impossible not to sympathize with the poor peasants who, despite their loss and frustration, have themselves made to make their living in the way to which they and their ancestors were accustomed. They say, in effect, we must live, and you, the government, to whom we pay taxes, must see to it that unscrupulous fabricators of wine be driven out of the business and thus make a market for our genuine wine.

These demands are characteristic of the spirit of the times, not only in France and in England, but also in the United States, where the people have been taught to rely upon government regulation and governmental processes for all the ills from which they suffer. Of more laws against adulteration more than a dozen have been enacted in France in recent years, and still the wine-growers of the Midi are unable to sell genuine wine at a living price. Instead of looking at all the possible reasons for this glut of their staple product the vintagers, feeling the pinch of hunger and necessity, argue that the government must be at fault, or at least it must find a remedy for their distress. The motto on one of the banners at the Perpignan meeting, *Le col du cratée*, goes with simple, if

inelegant, directness to the grievance of the people, which is urgent and demands prompt relief, which the government must supply in some way, whether by making wine a state monopoly, the enactment of still more stringent laws against "blending" and adulterating wine, or by some other means which may allay popular agitation and discontent and provide immediate relief.

It is hard in the case now to tell what has caused the glut of wine in the wine-growing districts of Hérault, the Aude, the eastern Pyrenees, and the Department of the Var are both economic and social. That adulteration, and "sugaring," a process which originated in the Midi during the scarcity of wine produced by the ravages of the phylloxera and has now returned to cause it, are largely to blame, rather than overproduction, has been shown by the correspondent of the Paris *Figaro*, who made a careful examination of the blight which has fallen upon the chief industry of southern France. He quotes apparently trustworthy authorities, who declare that every year the wine-shedders put the market from 15,000,000 to 14,000,000 hectoliters of artificial wine, and on price which simply means ruin to the honest producer. The artificial wine makers began to cut prices in 1900 and the evil, which has at last grown unbearable to the wine-growers of southern France, has been increasing ever since. It was greatly accelerated in 1902, when the Hérault convention made a revolt in the sugar trade, the price dropping to sixty-eight centimes a kilo and even less, naturally followed by a vast increase in the flood of adulterated or "sugared" wines.

Another contributing cause for the stagnation of the wine industry in France is colonialism in its origin. Algeria twenty-five years ago was a customer for French wine. Now it exports annually 500 million gallons, chiefly to France, where it is admitted duty free. The Algerian wine is of about the same quality as good *vitis rotundifolia*, and sells in France for about \$12.50 per hectoliter. The Algerian wine is also the artificial competition of Spain and Italy to meet, for these countries also have learned the secret of making wine which has only a slight resemblance to the genuine juice of the grape.

In addition there are other causes, social in character, which enter into the present situation and make it difficult, and almost impossible, for the government to meet the crisis in the summary fashion demanded by the wine-growers of the Midi. Since the last two Paris expositions the French have become acquainted with the seductive merits of Germany's national drink, and the French workmen, especially in the cities, no longer even know himself to *vitis rotundifolia*, but substitute for it, like the laborer in America, the pall of beer, while among the middle and upper classes the continued courses of certain medical authorities against the absorption of so much alcoholic drink has had considerable effect, and sparkling table waters and milks are now used by many who formerly always took wine with their meals. The continued and justified talk, also, about wine adulteration has probably had as even greater effect, and all these causes, operating together with a closer scrutiny of French wines in America, Germany, and elsewhere, are sufficient to show that it is no unmanufactured, but a real, agitation which has stirred southern France almost to the point of revolution. They at least show that in demanding that the government "apply the red-hot iron to this ulcer" of adulteration the peasants are striking at perhaps the greatest evil of the wine industry, and one they have a right to demand, but the government should also be aware that the economic distress, which is so palpable and the greatest danger is that an honest movement originating in a real grievance and acute distress may be used by agitators for their own purposes. To do M. Marcelin Albert justice, he does not seem to be working for ulterior ends, and his undoubted influence and great influence of organization have done much to make his cause palatable and successful inasmuch as so far as the latter may be possible, by means of drastic legislation which shall strike at the root, at least, of the evils of adulteration.

Show Mr. Rudenstam's article was written, the cable has brought news of a letter written by Prime Minister Combes to the Mayors of the Midi district who refused to execute the duties of their office. M. Combes insists that the government has no intention of a big market possibly be of benefit to the distressed wine-growers whose cause they seek to champion, since the Government has done much in doing all that it deems possible to relieve the situation by making every effort to prevent fraudulent practices in the wine trade, and M. Combes has been himself, in the case of adulteration, the alleged fraudulent practices in the wine industry of the Midi itself. He desires to know in what respect the Government has failed to meet the demand of the wine-growers, and he insists that the government, which he holds, must meet in the disadvantage of the class, which it is manifestly opposed to meet.

The Prime Minister has declined to affect the situation in a manner satisfactory to the Government, and at the time of writing it is announced that the government has decided to adopt stringent measures to insure the enforcement of the law in the Midi. M. Serret, Subsecretary of the Ministry of the Interior, who has been appointed to his position to expose the cause of his constituents and to give proper support to the Government.—Editor HAZARD'S WEEKLY.

A Cited Elopement

Est. Born to Galusha Brown,
Aan Arlor day, was wed,
Galusha, coolest head in town
(Almost a Marblehead),

Remarked to her, "Dent, Oswego
Without your good feeling,
And traina Schenckstadt as alone,
What do you say to Wheeling?"

"Doughkeepsie horse," the girl replied,
"Norwood I like Norwalk.
Calusa Fawcett for a ride,
We'll take the nag. Don't talk."

"Now Worcester me of adding that?
Who's Dunmore talking, dearie?"
But when upon the barnegat
He had a feeling like.

Galusha him Malone found? Nix,
Confronted Sara's parent!
Oh, Waterbury askward fix!
To turn and run he daren't.

"Oh, why should parent's Cumberland?
Have I for this nag fibouster?
Tacoma cross her father and
Spill all! Oh, Sara Foster!

"I'd Haverhill fall over me,
Or Haverstraw stark bury!
Oh, that a Lakewood cover me!
Painesville me—trying, very!"

So thought Galusha, but aloud
He said, "Well, Syracuse me;
Your Tanston I can stand," he bowed,
"While Sal does not refuse me."

"The Holyoke of marriage, sir,
Have you and she accounted?"
"Osgo, soon! A carriage, sir,
We need." The old man fumed:

"If Salamanca take like you,
With her plans I'll not famps,
This Harkness of money too
Utira long. Now scamper."

Galusha now (Yuma take it straight)
Was Mason for a preacher,
The Sacramento celebrate
Twist him and Sal, sweet creature.
GEORGE JAY.

Different Methods

BRIMSON. "My wife writes to me every few days from the mountains for more money."

WAGNER. "Well, I gave my wife all the money I had before she went away, and now I have to write to her when I want some."

A Treasure

Mrs. DE WITT. "The Debutants at last have a girl they hope to keep."

Mrs. DE WITT. "Alas! Where is such a girl to be found?"

Mrs. DE WITT. "She was born to them yesterday."

Demonstration

GRACE. "And did you ever propose to a girl in a cove?"

FRED. "Yes; and I'll never do it again. The girl jumped at my proposal and upset the boat."

O Tray Bean

"I see," said the editor, as he glanced over the manuscript of a realistic novel, "that in almost every chapter the villain automobile announces its approach by a sound which you spell 'k-a-a-g-u-n.'"

"Precisely," replied the author; "it was a French machine."

MOTOR CARS

Contain the following special features, which largely account for the great success of this season's models:

CRANK-SHAFT—Sawed out from solid block of special 4 house Nickel Steel. Not one of the hundred of these shafts in actual use has broken or given any trouble whatever.

CARBURETOR—New Multiple Jet Type, giving just the right and most economical mixture for high or low speeds.

I-BEAM FRONT AXLES—Drop forged in one piece without welding. The galls of the metal courses withdrawn from wheel pivot to wheel pivot.

TRANSMISSION—Improved type. Entirely done away with the troubles that occur in this member of the mechanism in many types of cars.

CLUTCH—So constructed that it takes hold evenly, gradually, and firmly, "savage" engagement being impossible.

With these and other superior mechanical features are supplied bodies that for beauty of design, finish, and appointment are unequalled in cars of other makes. This fact is conceded even by our strongest competitors.

MARK XLVIII, 24-25 H. P. STANDARD TOURING CAR	\$3000
LIMOUSINE	4200
MARK XLIX, 40-45 H. P. STANDARD TOURING CAR	4500
LIMOUSINE or LANDAULET	5500

Separate catalogues of Columbia Gasoline Cars and Electric Carriages on request.

THE WAR AGAINST CANCER—A NEW ALLY

By C. W. SALEEBY, M.D., F.R.S. EDIN.

Dr. Saleeby's articles in the "Weekly" on the discoveries of Dr. Beard touching a cure for cancer have aroused so much discussion—much of it unfavorable and some of it hostile—that this latest contribution from him on the enormously important subject which is engaging his attention comes at a peculiarly appropriate moment, for it announces the endorsement of his theories and conclusions by a scientist whose authority and eminence are unquestioned. It is only just to Dr. Saleeby and to Dr. Beard, the discoverers of "the tryptic cure," that the news of this significant corroboration be placed publicly on record.

THE reader will readily understand that in my attempt to gain a fair hearing, through all kinds of noise, for what I believe to be a great advance in the treatment of cancer, and what I have already saved many lives through the articles here published, I have long desired the support of some great and universally recognized authority, speaking from some official position that bore weight to his words. I know that there is no authority less truth, and that not the word of an angel from heaven can make black white. Nevertheless, in early stages we have to go by authority, and that authority is now coming round to our side, it would appear. Professor Ernst von Leyden is the professor of medicine in the University of Berlin, and his name is familiar to scientific students of medicine all the world over. He is also the head of the Official Cancer Research of the German Empire. As a scientist he is certainly the highest official authority upon malignant disease in the whole world, and if I had the power I would have chosen him of all men to lend the weight of his name and reputation and position to the unbiassed and thorough study of Dr. Beard's pancreatic treatment for cancer.

More than two years ago Dr. Peter Bergell (who collaborates with Professor von Leyden in the paper which I am about to discuss) demonstrated that "all carcinoma (cancers) are always very readily digested by pepsin (extract of pancreas), while, on the contrary, all other kinds of cancer resist digestion by it to its action. This, of course, refers to test-tube experiments upon dead tissues. Now let us see what von Leyden and Bergell have to say in their paper just published in the *Zeitschrift für Klinische Medizin*, Vol. 61, pp. 300-303, Berlin, 1907.

The following statements constitute an epitome of that paper in my own words.

The origin and growth of cancer is always a strictly local affair. Its unlimited point of growth has ever been its most striking symptom, and a most marked feature of it is that the tumor responds by *increased growth* to all forms of mechanical or chemical injury or injury by *acid bacteria*. We therefore are compelled to suppose that the really important fact for us to ascertain about cancer is not, let us say, the shape of the cells, but their chemistry. What peculiar facts are there about the chemistry of cancer which constitute the essential difference between it and normal tissues? Some of these must be, and accordingly it must be possible (in theory) to exercise a special action on the chemistry of cancer which will arrest its living processes, but will not affect the chemistry of normal tissues. Professor von Leyden insists that the most abundant of all central importance the study of the appearance of cancer to the naked eye and under the microscope. For decades this study has constituted practically the whole of cancer research. Medical chemistry during all this period was far too imperfect to be of any avail. The next point made by the authors is that the only substances found in living matter, which show a wide difference from each other while their own class, are the albumins, such as white of egg and the albumin of milk. Secondly, the various bromates which destroy these albumins are equally special and unique in their properties. Probably they differ from one another in precisely the same degree as do the albumins which it is their business to pull down. As Professor Emil Fischer, of Berlin, has pointed out—and he is the greatest living authority on organic chemistry—one of these ferments leads to the albumin which it destroys the same relation as a key does to a lock. Each lock requires its own key, and that key will open no other. The authors then arise whether the special albumin albumin substances in cancers. This has already been proved to be so by various German students, of whom Pavy was first, whilst Bergell in collaboration with another worker has definitely separated a peculiar and characteristic albumin from some special kind of cancer. Professor von Leyden insists that the existence of this special albumin is absolutely characteristic of malignant tumors as distinguished from innocent tumors and normal tissues. Next, the question has been definitely answered whether the special or native albumin of cancer can be specially destroyed. The original test-tube observations to which I have referred have now been confirmed and amplified. Bergell has obtained the special albumin of cancer in as pure a form as possible, and has found that it is easily digested by trypsin, whereas, on the other hand, pepsin, the familiar ferment of the stomach, has scarcely any action upon it. These demonstrations, by the greatest German authorities simply confirm what Dr. Beard, on theoretical grounds, declared must be so, as long ago as December, 1904, and what I myself have been asserting on the grounds of theory and of clinical observation, for nearly eighteen months. It is the further proofs but not the assertions that are new.

Now Professor von Leyden goes on to point out the bearing that these observations of his have upon the theory of Dr. Beard, and quotes his experiments on cancerous mice which I discussed here more than a year ago. In the light of these experiments Professor von Leyden determined to go very closely into the clinical investigation of the new method. A whole host of points now demanding attention before real clinical success could be expected. First of all, then, it was proved that when trypsin was given by

the mouth, a certain quantity of it actually passed into the blood. Professor von Leyden declares that by mouth administration it is possible to bring much larger amounts of trypsin into the circulation, than by subcutaneous injection; that it depends on your injection. On this point I have no doubt at all that Professor von Leyden will find cause to revise his opinion. The injections which he employed were doubtless feeble compared with the admirable injections which are the latest fruit of the splendid work of Messrs. Fairchild & Foster. It has to be remembered, also, that in whatever dose trypsin be given by the mouth, its exposure to the normal acid of the stomach will destroy it, and only by very careful administration at a time when it is probable that the stomach contains no acid, can it be hoped to pass on undestroyed. I insist on this as forcibly as possible because the great aim of Professor von Leyden was to destroy cancer practitioners in all parts of the world to place in the administration of trypsin by the mouth an amount of evidence which I believe it will not repay. In the patients whom Professor von Leyden treated there were reasons which would explain why the trypsin administered could escape destruction in the stomach. The patients were free of cancer of the stomach, in which it is known that the organ no longer produces its normal acid.

Nevertheless, though as I believe, Professor von Leyden's method of applying the treatment was very far from satisfactory, he has achieved his aim, and as a result in this paper, I predict first, that without doubt *circumscribed* results of cancer can be successfully digested by trypsin. The point is, of course, important whether the action is a true specific digestion, and Professor von Leyden promises us shortly a paper by one of his followers which proves that the influence of trypsin on the growth of a true cancerous action. He goes on to say that his results are inferior to those which might have been expected from the work of Professor Morton, already discussed by me in this place. That is undoubtedly so. But I believe inferior results will continue to be maintained until it is realized that hypodermic injection is the essential method. Professor von Leyden has given very large doses of trypsin by the mouth for months in various cases of internal cancer, and has nothing decided to report. That I should have expected. I doubt whether in such cases any active trypsin ever approached the site of the disease. No matter how large the dose and how active the action, the local action of the stomach would certainly destroy it, unless the trypsin was given with such special precautions as wrapping it up in something which the gastric juices cannot dissolve. But Professor von Leyden goes on to say that, in almost every instance, suitable doses of gastric cancer reacted favorably to the treatment, and he is prepared to admit, despite the imperfection of his results, that there is here a curative influence which must be recognized. In the course of his investigations he has brought out, he tells us, an absolutely new fact. Perhaps it is new so far as demonstration is concerned, but some of us have been proclaiming it for a long time past. The author reminds us of what he began by saying—that malignant tumors subsequently react by increased growth after the application of any injurious agent. But in trypsin he finds the single and all-important exception. *Cancer* has a tumor, after partial dissolution of its cells by trypsin, subsequently reacted by increased growth, either locally or generally. The point is that, whilst scores of substances will injure a malignant tumor, such as the surgeon's knife, passed containing arsenic and other caustics, here in trypsin is an agent in regard like them, but differing from all others in that, after its use, the tumor does not grow bigger, but it is all the more likely to respond with increased growth. Let us not fail to mark a second point which should be bracketed with this, and which Professor von Leyden himself suggests by his reference to the specific action of radioactive substances. It seems to be quite certain that the trypsin rays, radium, and other allied substances, which have previously referred to in this series of articles, have a very specific relation to cancer, in that they do affect it more rapidly than normal tissues; but in trypsin there has been found a substance which, whilst specifically digesting and destroying malignant tissues, whether living or dead, has no action whatever, in any dose, on normal living tissues.

No matter for the main substance of this most important paper. I have already ventured to offer criticism upon the amount of stress which Professor von Leyden is inclined to lay upon the use of trypsin by the mouth; and now I must point out another most important matter of which Professor von Leyden has yet taken no cognizance at all. He has used no ankyrin in any case, and has made no experiments with it. Now, except in the most superficial cases, I do not believe that trypsin alone will ever cure cancer. No one at any rate recorded a case of the cure of cancer by trypsin alone. The absolute cures, already on record—some of which I have previously referred to in this series of articles—were obtained without exception by the use of trypsin and ankyrin. I desire as soon as possible to oppose the opinion which might too readily be formed by many doctors and others who will only begin to pay any attention to the matter now that Professor von Leyden has spoken. The opinion is the whole remedy. Professor von Leyden's attention is being directed to his entire omission of ankyrin, and there is no doubt that he will proceed to look into the matter.

Weighed, and Found Wanting

"I want to like to get a pair of postal scales," announced the prospective customer in the stationery store.

"Yes, sir," replied the clerk, briskly. "Here's the lightest pair of scales on the market. They only weigh half a pound. They will weigh two pounds."

"You mean that when I put something which weighs a pound and a half on them they'll weigh two pounds?"

"Oh no," answered the clerk. "If you put a pound and a half on them they will still weigh half a pound more."

"But you said they weighed half a pound," persisted the customer. "Consequently, if I add a pound and a half to their own weight they'll weigh two pounds."

"Of course," agreed the clerk. "They will weigh two pounds."

"Then if I put another half pound on them, the weight of the scales will be exactly two pounds and a half."

"The scales weigh half a pound—" began the clerk.

"But you said they weighed two pounds," interrupted the customer.

"So they do," cried the clerk, desperately.

"They weigh half a pound, a pound and a half, an ounce, and two ounces. They'll weigh anything this side of two pounds."

"Are you sure they won't weigh over two pounds?" anxiously inquired the customer.

"They won't," snapped the clerk. "I'm certain."

"Well I only wanted to know. You said they weighed half a pound and two pounds, and, according to that, if I put two pounds on the scales, and add that to the weight of the scales, it proves that the scales either weigh two pounds and a half or four pounds."

"Do you want these scales?" shrieked the clerk.

"I wouldn't take them for a gift," replied the customer, quietly. "They are entirely too versatile. One time they weigh two pounds and the next instant they weigh half a pound. From my point of view, they can weigh anywhere from half a pound to four pounds, and I really couldn't depend on them. Good-day."

An' he couldn't do without it—
Fishin'.

An' the things he'd tell about,
How the fishes jerked and darted,
Till the double-headed trout
That he enticed a when first he started
Fishin'.

Told about a pond he knew
That he allus used to race fer,
Fishes swarmin' through an' through,
Jest the wonderful place fer
Fishin'.

Told us how he lived his life
All the blessed day an' laid the
Line, an' took the best on it—
Never mentioned leavin' all the
Fish in.

WILLIAM F. McCOMACK.

His Depraved Taste

BAKER: "What kind of breakfast-food do you use?"

SAKES: "Whatever happens to be on the first page. Generally a number."

Sights

THEY say, "Love's blind."

Can that be right?

Some men in love

Are just a sight.

THE INCOMPARABLE WHITE

THE CAR FOR SERVICE

Another Great Hill-Climbing Victory

In the annual hill-climbing contest of the Cleveland Automobile Club, held June 15th, a stripped 30 horse-power Model "G" White Steamer made the fastest time, 47 $\frac{2}{5}$ seconds, defeating by a comfortable margin a field of more than 40 gasoline cars (2, 4 and 6 cylinders), including the winner of the 1905 Vanderbilt Race. Our car made the climb at a rate slightly better than 50 miles an hour.

We won the two most important events of the day—the free-for-all and the Class A (cars weighing from 1432 to 2204 lbs.)—and in each event had seconds to spare. Thus did our cars duplicate the triumph scored at Wilkes-Barre on Decoration Day.

THE INVADER

By

MARGARET
L. WOODS

Price, \$1.50

THE astounding story of a woman with two distinct personalities—two women in one. Part of the time she is good, simple, devout, meek; part of the time enticing, seductive, and alluring. Her husband falls in love with—which side of her? A bewildering, astonishing story.

"It deals with a situation as piquant as 'The Masquerader,' and it may be depended upon to keep people up nights."

—*Chicago Record-Herald.*

"The dazzling changes, the bewildering transmutations of the heroine are not only plausible but absorbingly interesting."

—*London Telegraph.*

HARPER & BROTHERS, PUBLISHERS, N. Y.

THE BEST IN THE BASKET

GOLD MEDAL FLOUR is the best of all good things that come from the grocer. It makes the most wholesome and nutritious bread and the daintiest cake and pastry - It is a biscuit flour - It is a pastry flour - It is a bread flour - It is a cake flour - It is an all around flour made for you.
